He did? You said 'compatibles', will there be several different models?
1500 USD? What kind of computer will that be? I don't think he just called
you to say that there will be such computers. He must have said what would
be inside them as well? PowerPC?

Does he also realy mean Atari and not TOS and the Falcon? If he have
bought the lot wouldn't he get the Jaguar as well then? I also took a
peak at Atari's webpage. It was actaully updated as late as 17 februari
1997. What is going on here?

> I don't know what to make of this guy. Either he is genuinely serious

```
FOR SALE!!! 1040 STe - 4 megs ram
- Built-in DS/DD disk drive
- Mint Condition
- Manuals
- 2 JoySTicks
- 2 Mice
- JoySTicks Extention Cable (You need these) :-)
SC1224 ColorMonitor
SM125 Monochrome Monitor (w/ Tilt/Swivel stand) (Bigger thenSM124)
MegaFile Hard Drive - 2 drives in case 67megs(Modified to run 2 drives)
- External PC Power Supply
- Spare 20 meg drive

USRobotics SportSTer Vi 14.4 Modem - Voice/Fax/Data
- V.32bis w/ Group III Fax
- Personal Voice Mail
- 4 1/2 year warranty left
- External Black Model
- Mic and speaker ports

Boxed GAMES w/ manuals: Wayne Gretzkys Hockey, Team Yankee, Jet,
ThunderHawk, Flight Simulator 2, WindWalker,
Police Quest, Civilization, RailRoad Tycoon,
Breach, Corporation, The Colonels Bequest,
Falcon + 2 mission disks (CounterStrike +
FireFight), Master Tracks 1.00 & 1.50, Xor,
Hoyles book of games 1 & 2, Total Eclipse,
Space Ace, Missle Command, F-19 STealth Fighter,
F-15 STrike Eagle, Death Sword, and MORE...!!!

Books & Mags:

ST Format mags 40-70 (missing 64 (+ a few before 40)
ST Format DiSKS 1-70 (missing 2,3,5,64)
Various STart mags+disks
Various ST User mags+disks
Various ST Action mags+disks
The Atari ST user guide book
Other mags and docs..

AND ABOUT 800-900 DISKS (YES 800-900 DISKS) Tons of s/w, p/d and STuff..!

Extra's that come with the Package!
```

Six 256k simms
External Disk Drive Case+Power Supply
3 Single plastic disk boxes
PC Power Supply
Old PC Desktop Case
2 8088 Boards (1 good 1 bum)
Various PC cards (Don't ask what they are! About 5 of 'em)
Ton's and tons of Atari iNFo (Mostly Printed on paper) Dox/helpfiles.etc.
And 1 Work Desk - 3 Drawers
- 3 legs + 1 wooden one!! hehe

Will deliver and setup in Vancouver and surronding areas.
(Except for the desk, If you want it come get it)

All of this for one LOW Price of $600.00
This is a Boner of a DEAL! Don't miss out! :-)
If intrested send Internet Mail to:

dooley@infomatch.com

Or check out my Atari for sale page at:

>
> Ah, it'll probably be either the warning text or the posting by Richard
> Karsmakers recently on how to get rid of it. Don't scare me like that :)
>
That would be easy to spot. It's either CARPDIEM.ZIP (containing CARPDIEM.PRG
and a small text file) - THIS IS BAD NEWS - or it's just a text file (this
would be good news).

By the way...did I read that someone thought that Toad were distributing this
to sell SVK (Mike Mee's Super Virus Killer)? Certainly they don't intend to
sell that virus killer? It's literally three years or something since it's been
updated :-( Anyway, I suppose that particular someone meant this as a joke,
right? Certainly Toad can't be *that* devious.

Just to be on the safe side, I have included below the instructions on how to
get rid of the Carpe Diem virus... (layout is a bit screwed up, but hey...)

You have to remember that, on an infected system, there are a potential number
of three copies of the virus: One on your floppy disk, one in the hard drive
C:\AUTO\ folder and one in memory. These are the steps to get rid of the virus:
1) First you have to reboot without a disk, or with a disk that is guaranteed
to be virus-free. Turn your system off for half a minute. These two measures
will get rid of two of the possible three copies of the virus in your system
(in your computer's memory and on floppy). Make sure the floppy
disk is write-protected.
2) Turn your computer back on. Press [CONTROL] during the booting process. This
way - at least with the Atari hard disk driver - the hard disk will be
installed and accessible, but the programs in the \AUTO\ folder will *not* be
executed. If you have another hard disk driver installed, simply try
to bypass hard disk installation altogether (pressing [CONTROL], [LEFT SHIFT]
and [ALTERNATE] simultaneously usually ought to do the job) and install the
hard disk driver from floppy. This, too, will not install any of the \AUTO\
folder programs. If you have a Claus Brod hard disk driver installed,
all you need to do is simply boot off another partition, like D:, by pressing
the [D] key while booting.
This way, the virus will *not* install itself in memory. The virus will still
be on the hard disk, but it won't be activated and you are quite safe.
3) Now you have to get rid of a file called "~.PRG" in the \AUTO\ folder of
hard disk partition C:. It can't be located anywhere else. Unfortunately, the

file is hidden. That means you usually can't delete it until you can see it, and you can't normally see it. These are a few ways to delete it:

i) With "GfA Basic".
Go into "direct mode", "chdrive" to drive C and "chdir" to the \AUTO\ folder. Now, with "files", you can display the full directory, including "~.PRG". Now use the "kill" command to delete it.
ii) With the alternative file selector "Selectric".
Turn the "display hidden" option on, and simply delete the file from "Selectric" itself. "Selectric" can be started from the desktop, without needing to start it from the AUTO folder. You might have to switch to a higher resolution first, though.
iii) In the absence of the two options mentioned above, you can use any command line interpreter (such as "COMMAND.PRG").
These may not allow you to actually delete the file, but don't panic. They *will* allow the "ren" command, with which you can rename the file, for example to "~.XXX". This will not remove the file from the \AUTO\ folder, but will render it *completely harmless* - after all, only programs with the ".PRG" extension are run when the \AUTO\ folder is invoked.
4) Now, with a clean and uninfected system (memory and hard disk), you can get rid of all occurrences of the virus on all your floppy disks with the "Ultimate Virus Killer".

# 3505. MagiCMac and HSMODEM (Communications Toolbox? GSM?)

Newsgroup: comp.sys.atari.st
Date: 1997-02-19 00:00:00 UTC
From: djs@jet.uk
Message-ID: <djs.856351373@gen-off-3>
Source record: 127447

I currently use MagiCMac with a conventional external modem on my
PowerBook. I would like to use a PCMCIA modem (and possibly a GSM
data adaptor too). The docs with the PCMCIA card say that the drivers
will work with "any application that uses the Communications Toolbox".

Does the MagiCMac/HSMODEM combination use the Comms Toolbox? I have the
default MACM v1.06 driver installed. If not, is there a driver that
will support internal modems?

Can someone tell me what chips (parity etc.) I need to upgrade a 520STe to 4 Meg.

I have just bought the ST to run cubase and it is dead slow with only 1 meg.

Cheers.
Andy Stafford.

## 3519. WTF Brainstorm

Newsgroup: comp.sys.atari.st

It seems illegal, logically, but I never really researched the legal side of
things. I've always concentrated on analysing what the viruses do, and trying
to get rid of them. I guess I know a fair bit about the technical side, but
legally, like I said, I am blissfully unaware.

I would have an interest in your Atari 800's. If you could give me an idea how much you would want including shipping and I will give you an answer. I live in Ohio. I been wanting one since I got an Atari 5200. Since they are the same system and the games are similar, I wanted to get one because then I won't have to deal with the buggy joysticks of my 5200. I love playing and collecting classic games systems and computers and would love to add this to my group. Thank you.

They weren't bought out by another company. They actually bought the
other company, kept their name and their hard disk business and
abandoned all that is Atari.

I just got my ST up and running again, monitor problems, and I started playing my favorite game, Championship Manager. It is a soccer simulation game where you are the general manager. It was made from Domark and is one of the best games I ever played. My question is was there any sequels or any other games that were similar. Also was there an IBM version? Thanks.

You need 30 pin 1 MByte SIMMs, parity or non parity will work, as long as
they are 150nS or faster.

Try to ensure they are all the same speed grade, preferably all from the same
manufacturer.

BTW, I don't think this will give you any great increase in speed, you
will just have more memory available. For Cubase, maybe this is what you
need anyway.

# 3529. FS: Falcon 030 [UK]

Newsgroup: comp.sys.atari.st
Date: 1997-02-19 00:00:00 UTC
From: indaba@deathsdoor.com
Message-ID: <856390095.14021.0@tjordan.demon.co.uk>
Source record: 127471

Alright the time has come the end is near, It's time to face the
final curtain etc. etc. I am selling my Falcon.

Atari Falcon 030
4 MB Ram
130MB 2.5" Toshiba IDE Hard Disk
FPU (Yes Atari were silly enough to leave these out of
the base machines. One word 'DOH')
TOS 4.04 ( Also very important 4.04 was the last one
officially released)
RGB Monitor ( Yes I know it RGB but heh I already had
the monitor when I bought the falcon)
Logic 3 Speedmouse
Joystick
Evolution Dino Dudes
and that as they say is that.
All is in good working order.

So here is the important bit, the price.

Between 450-500 UKP

If you don't like the price then well i'm afraid it is tough I
would prefer whoever buys this to be in the UK.

All mail should be directed at one of the following email
addresses:
indaba@usa.net
indaba@bigfoot.com
indaba@deathsdoor.com
tjordan@tjordan.demon.co.uk

Just one final thing No Lamers please

>Browse predictably with CAB using SLIP in TOS. It CANNOT be done PROVE ME

Hello.

I have succesfully installed STiK/CAB on 4 Falcon 030 machines
using SLIP in TOS. It works perfectly without any problems
what so ever. I have helped atleast 20 other Atari owners
to install STiK/CAB.

Please send me your DIAL.SCR and DEFAULT.CFG
in your STIK directory. It is usually there the problem is.

hey, me too! sundog was a great game, i had to get an apple ][ emulator
just so i could play it. if you give me a zip of the disk i will check
it out on the emulator i am building.
if you still have an st,select the disk drive and go to the gem "file"
menu and select "show info..." and look at the "disk lable:" and tell me
what you see. or read the disk with an ibm look at the disk lable (when
you go "dir" in dos) and zip the contents of the disk and send it to

: From: "Mike Weber" <mweber@li.net>

: >Atari is dead... They got bought out by another company... Anyone have
: >those tos images ?? I can't find them anywhere!

: Yes, Atari has been bought out by another company.

In all honesty how can you say this. Atari merged with JTS and gave JTS
25 million dollars which is half of the money Atari received from Sega.
Sega bought about 70 million dollar worth of Atari to gain use of the
older Atari classic games. Atari netted 50 million cash then merged with JTS.

Atari still owns and controls TOS and it must still be licensed from them.

: Yes, JTS has all Atari's patents including the current copyright on
: TOS.

: No, you may not get a free TOS image because...well read the above!

# 3537. Need help with Freedom 2

Newsgroup: comp.sys.atari.st
Date: 1997-02-20 00:00:00 UTC
From: cp298@torfree.net
Message-ID: <E5xCtH.L10.0.queen@torfree.net>
Source record: 127279

Hmmm... These days, I'm deathly afraid of posting anything for fear I'll get hundreds of letters telling me about how I can stave off my hair loss.

Anyways, I've been checking out the demo of Freedom 2, and a couple of questions have come to mind...

1: Is there an English version yet? My German just happens to be REALLY bad...

2: I can't get it to save my CPX settings. Everytime I reboot, I have to change the settings in all my CPXs again. Am I overlooking something? Or is the demo restricted into not saving the CPX settings?

Thanks.

# 3538. NVDI 4 and VDI drivers

Newsgroup: comp.sys.atari.st
Date: 1997-02-20 00:00:00 UTC
From: Henry_Selchow@b.maus.de
Message-ID: <199702200148.a61498@b.maus.de>
Source record: 127280

Hello Jan

At first. Excuse my bad english. I'm german and normally I need no english.

JS>1) Is it possible to disable the VDI driver in NVDI 4 to use only the
JS>print drivers and GDOS fonts in NVDI?

AFAIK no. You can use NVDI (the VDI part) without GDOS. But not vice versa.

JS>2) I know that a computer with an ET-4000 based graphics card works
JS>best with NVDI-ET4000 BUT will it work at all with a normal version
JS>of NVDI 4.

NVDI-ET4000 only uses some additional features. So, the normal NVDI works
at all with an ET-4000 graphic card.

Regards from Berlin, Germany

Henry

At the risk of being flamed, no I am not happy about the wait:(.
If it had only been a partial years subscription I was out on
it wouldn't bother me as Rod has been a great supporter.
I know Lexicor stiffed him for quite a bit of advertising
space and with the limited dealers advertising, it's got to be
tough. If they worked out a deal like Current Notes did, that
would be nice. They did honer the rest of my subscription after
the new ownership took over. However leaving me with a years
sub+disk left, I wouldn't mind a copy of Tax Wizzard in lue of
a reimbursement:). Especially as I owe a bunch this year:).

Mike

There is no reason for anyone to flame you. I also am out a full years
subscription. There is not any reason to think there will every be
another issue of STI. I wonder if I could deduct what I paid for the
subscription, from my taxes, as a donation?

## 3543. Games

Ok now that I got Gemulator to work... Where can I find all those great cracked games out there I once had for my Atari? Also does anyone have the game called Pandora's Box? I think it was for the ST or 8bit. I'm not sure.... Anyway thanks for the reply's. Long live Atari...

P.S. - Any good user groups still out there? Also any atari st bbs'es out there? Boy this sure brings back memories....

>: 3) How do you get Oasis 1.34 to work under Magic?

If it's anything like Oasis 1.33 then there's two problems to overcome. Firstly, the MagiC options in the installer dont seem to work. Secondly Oasis refuses to execute Nos.

You get round the first by temporarily disabling MagiC and installing Oasis without using any of the MagiC options. It should then work and automatically call Nos.

Your second problem arises when you re-enable MagiC. Oasis stops executing Nos when you click on "internet". You circumvent this by doing all you want to do in Oasis then quitting it and running Nos directly from the desktop. The exact details of this depend on your desktop. Basically, you need to install Nos singletasking (it can run in a vt52 window but as Nos itself multitasks this can make things rather unstable) and pass it a command line of ...

-d F:\OASIS\ -s 40 startup.nos

changing the "d:\oasis\" bit to whichever directory has the "spool" directory in it.

It helps to know that Nos and Oasis are independant of each other. The only problem common to both is getting them using the same paths so each will pick up the files the other has just manipulated.

Under newer MagiC's look at the install application features to see if
limiting the program memory works. If not, look for an older program
called limitmem.ttp which should be able to do the job. Make a backup
of the executable though as I believe it modifies the executable
permantly. Having said that, I have never had a problem with limitmem.

>Nope, thats exactly what I have to do, I think it's a "feature" of

There's a program SDTIDYUP on my web page for dealing with visual
problems these older programs expect the desktop to clear up. Simply
install it on a keyboard shortcut and it restores things to the state
they were in when you originally ran sdtidyup.

senyshyn@helix.nih.gov writes:

>1) Is it possible to disable the VDI driver in NVDI 4 to use only the
> print drivers and GDOS fonts in NVDI?

Yes, it is! You have to turn off all NVDIDRV?.SYS screen drivers. I simpley renamed them to *.SYX, so that NVDI couldn't load them.

>2) I know that a computer with an ET-4000 based graphics card works
> best with NVDI-ET4000 BUT will it work at all with a normal version of
> ~~~~ ~~~
> NVDI 4 (and NOVA VDI version 2.61) ?
> In other words, will NVDI 4 fail in a Mega STE with a NOVA 16M card?

I own a NOVA Mach card, with NOVA VDI version 2.61, and NVDI runs with no problems. Only one thing you must keep in mind: NVDI must run *after* NOVA VDI.

Strange, to prevent such bootstrapping problems archivers usually are
distributed as self extracting archives. Anyway, if you need the newest
distribution of ARJ ST (current is 9.97A rev 3.101), please send a request to:
mr_ni@mst.tn.utwente.nl
And I will send you the complete ARJ ST distribution.

emwoll@emw.ericsson.se (Magnus Kollberg) writes:

MK>How is the true story? I have heard several people saying that MagiC
MK>doesn't have any memory protection at all (which looks to be the truth
MK>as it's easy to get "memory block destroyed" and a reboot as only
MK>solution, while MiNT handles this just fine) but they claim in the
MK>docs that they have.

MagiC has an id code at the end of a memory block. If an program writes over the end of the memory block - which is a bug - MagiC detect this, and termniates the owner of the _overwritten_ memory block - not the "bad guy". In the case the block belongs to the operating system, you have to reboot. The MagiC methode works with all CPUs, from 68000 up to 68060.

MiNT works in another way: It use the PMMU to watch the memory. If a program uses memory that it doesn't own, MiNT get this and terminates the process, who is illegal writing or reading from a memory block, it doesn't own. For this methode you had to have a PMMU, only with CPU from 68030 and up available.

From my point of view MagiC could not prevent the damage of data or program code while the id code of the memory block is leaved intact; and it teminates IMHO the wrong program...

Hi,

from the last summer I am a subscriber of the magazine
ST Informer (I've paid $ 98 for 12 issues + disks + Air Mail
shipping to Europe).
But, until now I have only received St Informer issue 97 (May
15, 1996) with disk.
So, where are the other issues?
I understand today is enough hard to realize a monthly
Atari-only magazine, but there are good bi-monthly magazines too.
I would like to know if there are other ST Informer subscribers
waiting for new issues.
Are you happy for delay or so..... :-(

Hello.

I have worked with a program LapLink for the PC. It was fine, cause
it was easy to copy and to view files on a remote computer. (It had a bad
bug, and I lost a whole directory, but that's another story). Then, with DOS
6 came the program Interlink/Intersvr, which allows one to use the drives
from another computer as if they were on the current computer. (Both
programs were able to use the serial port).
Does anyone know if there is such program, that allows me to view and
transfer (from/to) files on the Atari (Mega 2) and on the PC ? Maybe LapLink
for the Atari, compatible with the PC version? Or an Atari version of
InterSvr ?

Bye,

Guentcho

I have a 4Meg Falcon and I need more memory and HD space, so I'm selling/swapping my STE system.

4Meg STE, 74 Meg SCSI HD with interface - filled with software.
External DSDD Drive with BLITZ TURBO hardware fitted.
SM124 Hi Res mono monitor.
Mouse & cables
Stereo Master Sampler & Cartridge.
Hundreds of games.
Panasonic KXP1123i 360dpi dot matrix printer.

Jag system to sell/trade if desperate.

Offers of cash or ...
Falcon 14Meg RAM board or accelerator with RAM board.
SCSI drive or IDE drive of over 500Meg.
SCSI/IDE CD ROM Drive

Cheers

Yes there was a follow-up but not on the ST I think. If you liked Champ
then you'll love Champ 2 on the PC! It costs about 15-20 pounds. Its even
got match commentary! However, its not the hardest management game ever -
I managed to take Bristol City to the Premiership, finish second and win
the FA Cup in 3 straight seasons! I even got appointed England Manager for
the 2000 Euro cup!!

Enjoy!

Matt.

hmmmm, RCS3 is available, color support and no limitation.
Almost as good as Interface.
Available from cnam since 2 weeks now, and few hompage.
You don't have interface? get RCS3, very very good.

>teh Netherlands.
>
>Thanks
>
>Rees
Hi Rees
The solution to your problem is quite easy.I have a friend who has a Mega 2ST and some time
ago I took a look in it so if you look into your ST you will probably find
that you only need to get 16 memory chips (1 mbits) and solder them in to
the free memory sockets (its the ones next to the existing memorychips).
I think this should solve your problem although you need to be good with a soldering
iron or maybe ask a friend to do it for you.Mind you the chips are not
cheap (SIMMs are a lot cheaper).
Hope this will help you,feel free to E-mail me if you need more help.

Best regards:

You can try ghostlink that allows the ST to access the PC drives as if
they where ST drives.Works fine,but it uses the serial interface,so on
an plain ST it's rather slow.
There is also PARCP that uses the parallel interface,but I can't make it
work.It works fine for other people.
You can find them both at ftp.cnam.fr(I think)

Specifically, a detachable keyboard (which is probably the same as the Mega ST), and a new internal floppy drive.

Also if anyone can recommend some good cost-effective upgrades for this machine I would be happy to recommend them. By cost-effective I mean not so much that I could have bought a TT or a Falcon instead.

Thanks,
Jamie

>
Nope, I didn't get the idea across. One nickname (ONLY). The nickname
is "arg" the users are "tom@a.com susan@b.com flip@b.com". When you
send to "arg" all 3 users will get the message. If you have a
one-for-one nickname to user, then only 1 message gets sent. If you
define a nickname with multiple users, then multiple messages are sent.

Neil... LDW v2 works fine on the TT in all resolutions. It only converts to WK1 format for Lotus so I hardly think all the Lotus level 5 stuff would translate all that well. I hear Texel is *almost* ready for release and does both Lotus & Excel import/export. Unfortunately, Texel has been RSN for some time!

Keith

```
The Ad.Lib Message Base is Reborn!!!
====================================

Hi There!

Just a quick message to you crowd to let you know that Frank Charlton and
myself have reinstated the Ad.Lib Message Base on the Internet as an email
mailing list.

The idea is to get all the old daftness going just as you remember it.

With the sad passing of the BBS, this is a great way to translate some of
the old spirit onto the Internet. If you logged on in the past, you can
join us again through a simple mail list linkup. If you don;t know what the
heck I'm on about, give it a try anyway!

Please spread this message as widely as possible to all you think might be
interested in order to make this a worthy forum for all matters, whether
they be Atari, Mac, PC or just plain silly. Anything goes, but keep the
language reasonably restrained.

The SysOps are, as ever, Andy Curtis and Frank Charlton. :-)

To subscribe to the list, send an email to majordomo@adlib.co.uk with the
following in your message body:

subscribe mbase [first name] [last name]

(in my case this was: subscribe mbase andy curtis)

Subject does not matter.

I look forward to hearing from you all and chatting!

Cheers for now,
Andy Curtis & Frank Charlton

# 3582. Shareware Admin Machine gone. :-(((

Newsgroup: comp.sys.atari.st
Date: 1997-02-20 00:00:00 UTC
From: Denesh Bhabuta <denesh@cyberstrider.org>
Message-ID: <330C9185.51B4@cyberstrider.org>
Source record: 127351
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Most of the shareware support is done on the Mac.. which also doubles as my premier Atari machine. However, last night I could not switch it on. :(

I am going to get this fixed but am not sure how long it will take.

Due to the way CyberSTrider now works, this will not affect any registrations.. people will still receive them. However, the databases will not be updated until I can get the machine fixed (last backup was over 3 weeks ago). Other than that, I will have to manually go through all registrations received since the last backup and enter them manually which I don't have time to do... articles etc take priority for re-writing.

Rest assured, people will still receive registrations without any delay. :)

Regards
Danny

# 3589. CAB Help me keep hope

Newsgroup: comp.sys.atari.st
Date: 1997-02-20 00:00:00 UTC
From: lenkel@inconnect.inconnect.com
Message-ID: <5ei023$r48@news.inconnect.com>
Source record: 127358

Welcome!

To another chapter in the continuing saga of "Paul would rather be massochistic with CAB than give up on Atari web browsing and buy a PC!

Ok, so I finally get my ISP to clue into the fact that I use SLIP with no VJ etc. So I can get a page like yahoo, but click on a link and the modem just flashes send and receive for ever and I get nowhere! So Someone says I should drop the latest .OVL and get an older .OVL, which I do but then CAB 141 just crashes every other page! Some Runtime 136 or something. Also, why in the hell can't CAB display the graphics on www.atari.com the Jagwire, you'd think the developers would make it work on that one atleast. So I will buy a working version of CAB, but I want to see it first, because I don't trust the claims of people who aren't ashamed to put terribly anticlimactic non-working trash online under the claim that it is some kind of "Web Browser" even daring to compare it to "Netscape 2.0". If this is a fault of Stik somebody tell me!
I challenge any Atari Falcon 030 user to show me that they can Web Browse predictably with CAB using SLIP in TOS. It CANNOT be done PROVE ME WRONG even if it is slow, if it would only work! I have yet to exit CAB after being online! I always have to reset from a total LOCKUP, I get the first page, but it will always lock up right after a link or two! This is not useable software, PPP-Kit is a confusing Kludge, telling you to go out and get more stuff to use with it, WHY NOT PUT CAb for MiNT net overlay right in the PPPKit, maybe an engineering graduate can use that, but I'm not going to call my ISP and say after six months of hounding, oh could you turn PPP and VJ flag back on please! I WANT STik/ CAB to live up to its claims and just work, even simply.

# 3595. Pioneer CD-ROM ICD card and EXTENDOS PRO

Newsgroup: comp.sys.atari.st
Date: 1997-02-20 00:00:00 UTC
From: please@no.spam.mail.here
Message-ID: <29787_please@no.spam.mail.here>
Source record: 127364

Having just spent 80 quid getting a blown up Pioneer 6 disk CD-ROM player repaired (CDR-600) , can anybody help?

I'm using HD-DRIVER 6 and Extendos Pro 2.4 , I CAN'T get extendos to recognise more than disk 1 in the caddy.

I'm using the suggested config of X:7.0 Y:7.1 Z:7.2 etc to mark each individual LUN for the disks.

But extendos just reports 'unknown device' for each of the other disks.

Has anybody else managed to get this working ?

It works on my PC under WINDOZE fine....so it's definately software at fault.

Can anyone help?

# 3596. STiK and Mega Ste Modem 2 at 38,400

Newsgroup: comp.sys.atari.st
Date: 1997-02-20 00:00:00 UTC
From: ai066@FreeNet.Carleton.CA
Message-ID: <5ei96d$8dg@freenet-news.carleton.ca>
Source record: 127365

Ok, I have STik Running fine on my Mega Ste when I use Modem 1 at 19,200.
I have HSmodem installed, and switched from MFP to SCC after the loader.
I can connect to my provider with Stalker at 38,400, and I get the 28,800
connect message, and around 3200 cps on dl's.

When I reconfigure STiK to use Modem 2 at 38,400, it seems to connect OK,
but I never get any info DL'ed into the computer. CAB just stays on the
locally-loaded home page.

Any ideas?

I was reading the Atari ST FAQ and found reference to the above graphics card. Unfortuneatly the phone number for Rio Datel 1-800-782-9110 is some kind of special network, and not the company I hoped to find.

Could anyone direct me to a responsible company for this product. I am based in the U.K. but any company worldwide would be helpful.

In advance many thanks

Yes, and there's a simple reason for that. I didn't want to add the
exsting thread to my killfile, as I actually want to read about
WebSpace. Changing the thread name was an attempt to shift it away, so I
could then killfile it :-(

Yes, Atari has been bought out by another company.

Yes, JTS has all Atari's patents including the current copyright on
TOS.

No, you may not get a free TOS image because...well read the above!

Just get an old ST or TOS roms from Atari dealers, they still sell
them you know.

I have an Atari Mouse Master for sale. This device
allows you to have your mouse and two joysticks plugged
in at the same time. No more switching from mouse to
joystick and back again. Really saves wear and tear on the
I/O connection to the computer and eliminates the aggravation
you have every time you need to switch devices.
Asking $25 and I'll pay the shipping via UPS.

Leave me E-mail if interested. Thanks ! !

Hi John,

Well I tried the above, but with a few problems. The single nickname post works fine, but I can't get the multiple post to work:

Say the nicknames are John, Suzy, Bob, and Sam. I don't think NEWSie would understan JohnSuzyBobSam as a To: send statement. I tried with spaces between the names, etc. Nothing worked. Do you really use abc, a b c, a-b-c, a,b,c a.b.c.?

Charles

# 3618. Digital Master boxes

Newsgroup: comp.sys.atari.st
Date: 1997-02-20 00:00:00 UTC
From: bender@doemain
Message-ID: <5eh0cv$lvk@engnews1.Eng.Sun.COM>
Source record: 127417
Body handling: HTML body converted to readable text

I recently picked up several sets of audio I/O units that were originally designed to work with the Atari computer. The units I have appear to be the "Digital Master" by "Digital F/X". I think Digital F/X was a spin-off or re-incarnation of Hybrid Arts, HA made the earlier 2-channel Digital Master and the circuit boards are sprinkled with the same type of witticisms silkscreened on. I think HA is out of business, and so to DFX, but I'm not sure. I'd like to find out some programming and hardware information on these units so that I can design an interface to my Sun SPARC machines and write some code that will let me use them for audio I/O.

Does anyone have any detailed (programming/hardware) information on these units or know anyone that does?

Info on the 1024 cartridge port would be appreciated as well.

thanks,
mike

It's not jpeg.acc that gets stuck, it's the decoder. There is some bug in
MagiC to do with the DSP support. This results in the decoder hanging
sometimes under MagiC (reboot required).
This happens in CAB, Imagecopy4, jpeg.acc and Positive Image.
It's a pain in the arse and I just wish the MagiC guys would sort it out!

# 3624. FS: Atari Computer Goods! Even More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-02-21 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5ek0nh$s41$1@kelly.teleport.com>
Source record: 127223
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got Monitors for your Atari 8 Bit like Commodore CM-141 "Like the Commodore 1802" And Disk Drives for the Atari 8 Bit like Stock 1050 and a 1050 Duplicator Drive for Backing Up Software. Plus I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! Plus a Good number of SSI and Avalon Hill/MicroComputer Games, and Many of them are Complete. Plus some Flight Simulator II from SubLOGIC including Scenery Disks all for the Classic Atari 8 Bit. For the Atari ST & newer Computers I've added to my HardWare Catalog Spectre GCR Mac Emulators, Indus (Future) GTS-100X Disk Drives, Panasonic MultiSync Monitor that does Double Duty for both ST Color and MonoChrome Monitors and the Cable/Hardware to your ST Computer. I've also added Software to my ST Catalogs & revised my prices. Titles such as Shrink Wrapped Brand New copies of Ultima V for those of you Ultima Collectors & for you who like Flight Simulators, theirs F-15 Strike Eagle, F-16 Combat Pilot, Falcon, Falcon extra Missions Disk, Fighter Bomber and Flight Simulator II. In Productivity Software, theirs Data Manager ST, Degas Elite, Easy Draw, MultiDesk, NeoDesk, Revolver & PageSTream. All for the ST.

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports.

You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

Yea, but I would agree with Magnus on this one - Webspace is a COMMERCIAL
product, which some people appear to have forgotten on this newsgroup.
Yes, they are releasing a DEMO, but it is just that - not a shareware
version.

Does the Papyrus demo let you use it fully even for a short period? No.
Does the Image Copy demo let you use it fully, even for a short period? No.
This is what has been talked about on this newsgroup for Webspace, which
IMO isn't appropriate for a comercial product.

Obviously feedback is useful (I have emailed OXO with a number of
comments/bug reports which will be incorporated in the next version)
but I think the demo is something which should be left (primarily) to
the developers to decide.

> 1040STf the 1040STfm and of course the 1040STe Don't remember what the
> STf stood for, but the STfm had a built in RF modulator and the 1040STe
> has enhanced color pallet. Hope that this is of some use to you

1040ST : The original 1040 (came approx. in 1986)

1040STf: Same, but with built-in floppy (shortly after)

1040STfm: Built_in floppy and RF-modulator (aprox. 1987/88)

1040STE: Enhanced 1040STfm, has DMA-stereo sound, enhanced color palette,
4 30-pin SIMM slots for up to 4 MB RAM, BLiTTER as standard and
and two additional Jaguar-Pad compatible joystick ports.
(was released in late 1989 about the same time as the TT030)

Keep Cool and Flying...

## 3631. NVDI fast printing ...

Newsgroup: comp.sys.atari.st
Date: 1997-02-21 00:00:00 UTC
From: All@Sea
Message-ID: <111_All@Sea>
Source record: 127230

I just tried to use NVDI 4's fast printer device with MagiC 5 ..

Got the necessary file (DEV_FPRN.DEV) and put it in the XTENSION folder, on starting MagiC it appears in the U:\DEV folder ok .... but if I try printing with it, far from being quicker it's painfully slow!

I have set NVDI (in the CPX module) to print using that instead of anything else but it doen't help ...

Anyone any ideas or help??

I have complete sets of STart Magazine Disks and some other ones also.
Here is what I have. Make an Offer..

Here are the disks I have. A total of 87 disks. I have more but are just
duplicates of these 87.

STart
Premiere Issue #1 (Summer 1986)
Issue #2 (Fall 1986)
Issue #3 (Winter 1986/87)
Issue #4 (Spring 1987)
Volume 2, Number 1 thru 4, and #6 (Full year for them)
Volume 3, NUmber 1 thru 12
Volume 4, Number 1 thru 12
Volume 5, Number 1 thru 7 (They stopped at number 7)

***This should be the complete set of STart disks!!!****

Compute! **Should be a complete set***
Issue #1 thru 11
Complete Set

ST Log
#13 & #14
#20 thru 23
#26 & #27
#30 thru 36

FaSTer
Volume #2, Issue #1 and Issue #2

ST XPress
Volume #1, Issue 9 thru 12
Volume #2, Issue #1, #3, #7 thru 13
Volume #3, Issue #2

Atari ST User
Nov 1989 and Oct 1990

ST Format
Issue 80, and 81
**I have the magazines for these two more recent modern issues.

Total of 87 disks.

Make me an offer.

Thomas

*I also have roughly 175 various Atari related magazines.

There are still several software and hardware products, suitable for atari ST, TT, Mega's and so on which I'm sure will be useful to someone out there. I've listed approximate prices for each, if you are interested in anything then contact me via email on spesgw@cf.ac.uk....

Software:
Script wordprocessor (original version) : 20 UKP
Breakthru 2 plus (32 midi channel version) : 50 UKP
Twilight screen saver : 15 UKP
Calligrapher gold version with extra paks : 25 UKP
Easy Draw 2 : 15 UKP
MagiC 4 : 30 UKP
Ease 4 : 25 UKP
Kobold 2 : 25 UKP
SC55 editor from Kang Kong productions (excellent gem package) : 30 UKP
Neodesk 3 : 10 UKP
Personal office comms : 10 UKP
System solutions pro truetype font pack (5 disks) : 20 UKP

CD roms
Suzy software treasury (2 CD's) : 25 UKP
Gemini shareware CD vol 1 : 20 UKP
German shareware/pd/TTF and calamus fonts/clipart : 25 UKP for 2 CD's
Assorted clipart c.d's : 15 UKP each

Hardware:
External SCSI CD-300 apple cd-rom drive (suits falcon or TT or ST/e with host adaptor), complete with latest extendos pro : 100 UKP

Vidi 12 ST colour digitiser package : 30 UKP

Graffiti PAL genlock for atari STe (with PSU) : 85 UKP

Hama trilock digital pro genlock (suits any computer) : 225 UKP (as new)

Misc software (for PC)
Visual reality 3D package (all boxed with manuals) : 50 UKP

Regards,
Simon

The demo has a few restriction of which not saving the CPX setting is
one of them.
Get your registration, Freedom 2 is really it's money worth.

"pompey pirates" is a group of crackers/hackers. Jeffy apparently is under
the impression that US Federal laws are of no important to the adminstration
at pacbell.net. He's wrong.

Not here. Copyright violation is NOT looked on favorably. You want the
games, buy them used - or new, from the vendors who ARE still in business -
or find another method of stealing them.

I thought I'd pass along the following response to my "out of memory" while printing problem from HiSoft:

> Speedo 5 doesn't have the greatest memory management, this is likely to be
> the problem i'm afraid. You can try increasing various caches in Speedo but
> I suspect you will have no success. Try reducing the papyrus' memory and
> increasing speedo's.

My workaround has been saving as RTF and printing using Papyrus 3. Sigh. I've ordered NVDI to replace Speedo.

What made the Papyrus 4 upgrade attractive to me is the way fonts are selected. In Papyrus 3, the last selected font is used - regardless of where you place the cursor! Grrrr.... You could go into a Swiss Italics block of text but possibly get Garamond bold when you type. Fixed in Papyrus 4.

Furthermore, in Papyrus 3 if you return to a document after a few days and want to add something in the middle, you couldn't tell what font to select unless you experimented. Papyrus 4 tells you the font, style and size of the text at the cursor.

## 3651. formatting for a mac

Even if you could get cracked games, they may not all run on
Gemualtor.

Remember, this is primary for GEM applications. If there were such an
emulator to play games, then it should be made to prevent 'any'
pirating.

What's with this free cracked stuff anyways? On the 8-bit newsgroup,
most of them are 'proud' to pirate games which to them is supporting
the 8-bit platform. I know a game designer who still makes money
from 8-bit games(third world countries and Russia who still use the
machines), and he does not like it one bit when you crack one of his
games.

>Really???? For the ST or for the old 800 series he's talking about?
>I'd *really* like to get Pacman (the original version) on my STe!!!!

I had Video G1, which is a ST game, and it's ok. A bit sluggish, but
it's fun to play Pong and Invaders at the same time.

Atari came out with an offical Pac Man game for the ST, but from what
I seen it looks no better than a PD write up from the late 80's.

Check out Pac-Man On E's for your STe. It's the closest to the
orginal idea with a few extras to make it cool.

Oh yeah, there are "lots" of classic game translations on the ST.
Dave Munsie did an excellent job with Berzerk which dead on like the
arcade :)

# 3664. MIDI Multiport for Falcon

Newsgroup: comp.sys.atari.st
Date: 1997-02-21 00:00:00 UTC
From: FPINTO <fpinto@cougarnet.byu.edu>
Message-ID: <Pine.OSF.3.95.970221223529.4349A-100000@acs2.byu.edu>
Source record: 127263

Hello:
I would like to know how many options are out there with over 2
midi outs. Doesn't matter midi ins. Any help will be appreciated.

If you know of options for the ST I would be interested too. There are
several midi boxes available for PC-MAC that are ready to be connected to
the printer port. Has anyone had any experience with those? Is there any
driver necessary to re-route the Midi signal to the printer port; or is it
always available at this port too?

BWishes:

Phill

>Yea, but I would agree with Magnus on this one - Webspace is a COMMERCIAL
>product, which some people appear to have forgotten on this newsgroup.
>Yes, they are releasing a DEMO, but it is just that - not a shareware
>version.

Yes but what most people were getting at including me was that the
demo version didn't work online..

>Does the Papyrus demo let you use it fully even for a short period? No.
>Does the Image Copy demo let you use it fully, even for a short period? No.
>This is what has been talked about on this newsgroup for Webspace, which
>IMO isn't appropriate for a comercial product.

Having a demo of a net tool you cant use online though is like having
a comms program that doesn't work online either.. connect demo version
available but it wont dial...etc..
Ftp client which wont let you connect to anwhere..

>Obviously feedback is useful (I have emailed OXO with a number of
>comments/bug reports which will be incorporated in the next version)
>but I think the demo is something which should be left (primarily) to
>the developers to decide.

Yes feedback is very important and thats just what people were doing
until people started butting in and arguing.

Nick.

Really???? For the ST or for the old 800 series he's talking about?
I'd *really* like to get Pacman (the original version) on my STe!!!!

In article <5ei023$r48@news.inconnect.com>
lenkel@inconnect.inconnect.com (Paul D. Luscher) wrote:-

>something. Also, why in the hell can't CAB display the graphics on
>www.atari.com the Jagwire, you'd think the developers would make it work

No idea about this one. Never tried it. Don't own a Jaguar. And who gives a stuff about some 'official' atari site. Atari gave up on the ST ages ago, so I hardly think their web site is going to be worth visiting!!

>So I will buy a working version of CAB, but I want
>to see it first, because I don't trust the claims of people who aren't

Err. CAB is shareware. If you don't like it and use it, don't pay for it, simple as that!! That's the point of shareware!

>ashamed to put terribly anticlimactic non-working trash online under the
>claim that it is some kind of "Web Browser" even daring to compare it to
>"Netscape 2.0". If this is a fault of Stik somebody tell me!

Erm. Not endearing yourself to anyone in this group. CAB *does* work and ain't trash! It's the best, *only*, graphical web browser for the Atari ATM.

> I challenge any Atari Falcon 030 user to show me that they can Web
>Browse predictably with CAB using SLIP in TOS. It CANNOT be done PROVE ME
>WRONG even if it is slow, if it would only work! I have yet to exit CAB

Hmm. Funny, but I've been using it for ages on a Falcon030 under TOS4.04 and MagiC4/5. Works great! Also works really well with a Nemesis board!
So there!!! :)

Sure I get the odd crash now and again. But then I get *major* GPF's under Windows95 running MSIE3. So I wouldn't say CAB is any less reliable!!

>after being online! I always have to reset from a total LOCKUP, I get the
>first page, but it will always lock up right after a link or two! This is
>not useable software, PPP-Kit is a confusing Kludge, telling you to go out
>and get more stuff to use with it, WHY NOT PUT CAb for MiNT net overlay
>right in the PPPKit, maybe an engineering graduate can use that, but I'm
>not going to call my ISP and say after six months of hounding, oh could
>you turn PPP and VJ flag back on please! I WANT STik/ CAB to live up to
>its claims and just work, even simply.

I didn't know the author's of STiK and CAB had made any claims?

I can understand your frustration (I'm prone to very rude, badly thought out posts myself), but this really will just put people's backs up!!

Like, I said, I've been using STiK/CAB for ages on a Falcon030 and it's pretty reliable.
Use STiK 1.12, CAB1.5 030, and the ovl you want is 1.21 (always worked for me). It's the ovl bit that causes the most problems IMHO.

I think you must convert the dingle CRs or LFs at the end of the lines to CR LF (#13 #10). I am sorry I can't see if the files of the Atati are with CR LF, or only with the one of them. If you dont make this change, most programa on the PC will work fine with the text, but some if them get confused - e.g. Windows' 3.11 Notepad, at the moment you try to save the file again.

From: dritter@lightspeed.bc.ca
Message-ID: <5ej2vb$29n@saltspring.teleserve.ca>
Source record: 127304

I am surprised how few hardware hacks there are out there for the Atari ST. At least in english. If you can read german it's a different story. Anyone know about some good hardware hacks on the internet for the st that are in english? Like building a harddrive interface, or adapting IBM high density drives. I'm talking about build yourself projects not stuff you buy. Stuff you buy is easy to find.

L8ter 8-)

There are quite a number of hard disk interface out for the ST, as for going to a high density drive, there is a upgrade made to work for that also, requires you replace the WD1771 with an Ajax chip to make the jump (and a HD drive of course)

>that type of posting...ie: everyone in here with a spamblock email :)

Hi Tony!

Well, I noticed that you didn't have your e-mail address in the header :)
Smart...

I'm sure that you're aware that the reason many use spamblock e-mail in their headers is that ANY post to Usenet almost always initiates a bunch of unwanted e-mail spams, get rich quick schemes, and bogus posts! We can all thank Rich T. and others that watch over the Atari NG's and limit, somewhat, the spammers. I'm not sure if Rich's X-Legal-Warning header limits e-mail spams or not. But, he's the expert on this subject. Why they target c.s.a.s.t is beyond me ;) Do they think we are all easy marks?

If anyone is interested in how commercial bulk mailers get your e-mail address you can connect to www.mailloop.com and get it from the bulk mailers mouth!

These sellers like mailloop sell their stuff to anyone and there are getting smarter (devious?) every day. The reason they are successful is that newbies on the Net BUY their products or the result of their products :( I've had several friends new to the Net that join AOL and buy books, etc. from the first group that e-mails them. This just starts the chain of events for those looking for easy money...

So you've got newbies spamming and buying and criminals scheming... All in a days work. The bottom line is that anything that throws a monkey wrench into the spammers plans is OK by me. Freedom of speech is fine, fraud is something else. The experiences of rah96 are a lesson for everyone. So, be AWARE :)

Charles

The F stands for Floppy drive - it was the first ST to include one. On
the original ST, you had to buy a seperate drive and attach it to the
computer.

YES! There is an Atari ST soundchip emulator that comes with a ton of
music files, including the ones your looking for! See my web page for a
link to it! It is a soundchip only emulator and requires no goofing with
ROM files! Has DOS and Windoze versions!

And since it requires 4mb of RAM, and my crap 386sx/16 only has 640k, I
just finished writing a player that plays these files on a real ST. I'll=20
have to polish it off and put it on my web page...

And as soon as I figure out how to read that damn Acrobat format that the=
=20
SoundBlaster docs are in, I'll try writing an emulator that transelates
YM2149 registers to OPL2 registers instead of emulating the YM2149 fully
in software. Should require much less memory... :)

Would you use a wordprocessor demo which only let you load documents
from disk, and not create your own test docs, however small? Would you
use a gfx package demo which only viewed images? Nope. The point
everyone was making - and they're all aware that WebSpace is full
commercial - is that an offline demo was unsatisfactory to potential
purchasers. Surely to God end users can still make their feelings known,
or would we all prefer if we vote with our wallets, rather than
providing OXO with opinions before the product is available?

Why not just format as a PC disk? Any Mac with System 7 installed should
come with PC Exchange installed too, which reads/writes DOS floppies
with no hassle. Far easier than mucking with that Mac GCR format.

From: escher@netcomuk.co.uk
Message-ID: <330edb63.3848100@nntp.netcomuk.co.uk>
Source record: 127182

Fellow Atarians,

How can I transfer a number of large .aif files from a Falcon to a PC?
I'm trying to get some of my files onto a PC which has a CD-writer
with mastering software.

I've seen PCs at work "talking" happily through null-modem cables, so
surely the Falcon can chat to the PC?

If it can be done without the cost of a removable drive or the
expensive CD-recorder software, I'd love to know how.

BTW - the PC has a SCSI card.

Thanks in advance,

Jim

An honest question deserves an honest answer Frank :)

Nope, but perhaps you can tell me why my original contribution to
this thread about how best to release a demo of a program has caused
so much problems? it was IMHO no worse than anyone elses
contruibution? I simply mentioned a time demo may not be the best way
for the programmer....wow next thing you know people whith good names
who are well respected in the ATARI community start attacking me and
calling me moaning?
I realy dont understand?... please check my original comments, there
was no need for people to insult me for it??? but it seems they can
dish it out but cant take it back, it would also seem that they who
dish it out..no problem, but when I respond, you then have a go ????
hmmmm :(

Out of the ether, the following was mentioned by cvendel@aol.com...:

c> as far as resolution vs. color. I'm looking for a video adapter
c> that would give me a standard 600 X 800 resolution at 65,000 color
c> or a color pallete close to that at that resolution. The TT's
Well my Matrix TC1208e does 1152x768 in 65,000 colours. Though it will also
do more colours (can't remember the exact number but its in the millions) at
the specified 832x624 resolution.

Though I normally run it in 1280x1024 in 256 colours as I need the screen
real estate more than the colours.

c> and after you get spoiled using PCI adapters at those resolutions
c> on PC's,
Well my card is very similar to the ATI Mach64 PCI card in my PC, though not
quite as cheap! ;-)

c> I really like the TT030.
So do I!

No, I quite agree with you in that sense. If you remember, my reply was much the same thing - and programmer who can afford to ignore feedback from end-users is a bit daft, IMHO.

Tony, I don't know or care how the argument between yourself and Magnus degenerated into a mud-slinging match - all I was doing was asking you to either change the thread title to shift it away from the real webspace stuff, or take it to email. Your reponse was to go on about how I was resurrecting the thread.

I'm not arguing about this any more, I've just started doing the thing I was annoyed about in the first place, i.e. arguing in a public group rather than email. Then again, I don't have much choice when I do email you and you bounce it as 'Message returned unread', do I?

ATB, Frank.

>version.

Excuse my ignorence Anthony, but eerm whats the difference? some
shareware programs are more expensive than commercial products, what
are we defining as the difference?, I understand the concept of
shareware, try before you buy, commercial is usualy buy then try,
maybe at your peril? and cost:(... so couldnt we look at it that the
programmers are doing possible customers a good service by letting
them try it out before maybe wasting there money?, or have I missed
something :)

>but I think the demo is something which should be left (primarily) to
>the developers to decide.

Agreed it is there decision at the end of the day, but surely help
and advice should be available to anyone, no matter how they release
the product, at the end of the day it is the customers who will
benefit :)

Just a thought?

Cheers...!ynoT

# 3729. GEMulator & TOS version

Newsgroup: comp.sys.atari.st
Date: 1997-02-22 00:00:00 UTC
From: molin@smurfy.tcimet.net
Message-ID: <molin.856632191@smurfy.tcimet.net>
Source record: 127200

I really won't care all that much if I _CAN'T_ do it, but does anyone
know if GEMulator will work with a TOS 4.04 image? I'll use whatever works,
of course, but I've been using 4.04 for a couple of years and the transition
would be easiest.

Ultimately, what I care about most is to work with PageStream in color.
If I recall correctly, PGS would only provide on-screen B&W unless you
wer using TOS 3.xx or higher... Is this true w/ GEMulator?

Thanx!

## 3731. CAB & Sound

Newsgroup: comp.sys.atari.st
Date: 1997-02-22 00:00:00 UTC
From: godbey@wizard.net
Message-ID: <5enbb1$317@news2.cais.com>
Source record: 127202

I have a probelm getting CAB to play sounds. For example, if I go to a site that has an AU sound, and click on it, CAB loads the sound, then says "Formatting text" and then displays the file on the screen. It will not play it. I have no problem playing the sound when I am off line, but can't get it to play while I am on line.

I have tried several programs, most recently PHPLYR, and none seem to work for me. I do have them selected to play AU files in CAB's configuration.

Anyone have any idea what I am doing wrong?

John

# 3733. Oasis 1.35 probs, HELP!!!!!!

Newsgroup: comp.sys.atari.st
Date: 1997-02-22 00:00:00 UTC
From: jaubrey@jaubrey.demon.co.uk
Message-ID: <856635476_OASIS_@jaubrey.demon.co.uk>
Source record: 127204

I've been using Oasis for the past six months without *any* probs at all, other users tell me how crap it is etc, I've always maintained that its fine, but now I am beginning to change my mind! :( A few weeks ago I lost *all* my emails(about 150) as the prog crashed with a error 26, when trying to access my post box, I also lost my yellow pages, hence all my email contacts, this however was my fault as I don't keep backups :(. Now however I seem to have a more serious problem, when exiting from Nos, after a d/l session, a box appears, as normal saying 'Merging News Groups' the screen then bombs(3) and colours look all smeary. I can rerun oasis, select internet and then news groups, which continues the sorting. I have a nasty feeling that Oasis is a ticking timebomb, just waiting to crash completely. I've tried Oasis 2.05 but that is naff, Icenet conf prog bombs, and you get loads of cheaksum errors. Has anyone any suggestions, what to do, if I need to completely reconfig prog, if so, where do I get an Oasis.tos from?

Thanks,

James

Funny thing.... I searched the net for it, couldn't find it- then had a
look on my harddisk and I'd already downloaded it some time ago!
I tried it again and yes- it's pretty cool, but I'd still like to get my
hands on the original "Pacman" and "Ms. Pacman".

First of the the Atari ST had a reputation as being a "game machine"... Why would I want to run Gem applications when my IBM compatible blows them away???.... All I'm looking for are those great old ST games that are either worthless or blowing in the dust. Plus most of these game companies don't even exist anymore! All the 8 bit stuff is available for download... Why can't I find a place like Yogi's for the ST? Let's face it the Atari ST was a great computer for it's time but it's time is over and time to move on to better and greater things. If you think i'm gonna pay for software that has no support or may not even work your mistaken... I can't even find an atari dealer around here anymore that sells software for the ST...

So what's your point? You want me to go and buy it? Ok i'll pay 1 cent for it.. That's about the going price for a non-existant machine... If you think I'm gonna go out and pay $$$ for software that has no more support and may not even work on these emulators your mistaken... Heck I bet I can't even buy an ST machine from a dealer near me... Anyway I owned an Atari ST a long time ago so that should give me the privilage of getting those tos images.

I know of two.. the ST MIDI-3 from Steinberg (adds 3 MIDI outs, 1 MIDI in), the MO-4 from SoundPool (adds 4 MIDI outs), and the Steinberg SMP-2 (adds, I believe, 2 inputs and 4 outputs).

I have the ST-MIDI 3 and it works fine.

# 3755. Wild & Wacky Atari Auction (Update #1)

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970223030700.WAA06168@ladder02.news.aol.com>
Source record: 127127

The WILD & WACKY ATARI MEMORABILIA AUCTION #1 (Update #1)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
Everything has been tested except the Intv carts.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 8th.

One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

# 3756. MUSIC STUDIO ST files into MIDI files: Any utility for that?

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: imran@panix.com
Message-ID: <5eot82$3af@panix.com>
Source record: 127128

Greetings ST users. Some years ago I had saved a bunch of my Music Studio files from the ST hoping to some day use them on a different MIDI program. Now, I got an Atari ST for this purpose hoping to play the files on Music Studio and record on the Mac's sequencer as real midi files. But, unfortunately, the only disk I can find with Music Studio on it is not working, and I wonder if I can get it from someone who has it, or if there is a utility to convert MS88 files to MIDI files.

Your help appreciated. Please email imran@panix.com. Thanks.

Dan Ritter (dritter@lightspeed.bc.ca) wrote:
> I just noticed this 1040st I have is labeled '1040ST F'. I did here before
> that an 1040ST E' the e meant enhanced. So what does the 'F' mean?

As with all ST's pre-1990, they follow a standard naming convention:

520 = half megabyte of RAM installed when new
1040 = one megabyte of RAM installed when new

ST = ST (Duh!)

F = Builtin _F_loppy drive
M = Builtin TV _M_odulator

The Mega ST is essentially an STF with 1 2 or 4 megs of ram.

The "STE" is really an STFME (STFM Enhanced)

Damn, if that is the way it works, I can't wait. I once purchased a
Playboy
with Barbie Benton in the center. As I once owned the magazine, I should
go
right to her door and demand service for one cent.

Mike

The non-existant machine is guaranteed to be yours in the near future.
Not to worry, I WON'T be asking for your software:)

We'll you could also look at it this way. If everyone that wanted to
run TOS under Gemusucker, STunk, or TOSitAway, actually purchased the
ROM's,
it might just keep an Atari dealer in business for that much longer. A
lot
of these business go on month to month sales to keep their doors open.
I wish I had more ROM chips than I do. With about 30 request a week, if
everyone purchased a set for $50.00 a pair, ummm, $1500.00 is probably
more
than you make a month. And probably enough to keep a dealer interested
in the TOS market long enough to import a few more new titles (yes,
there are a few new apps coming this way).
I remember once someone said that Derrik had called <all> Atari users
pirates. It seems to me with the Gemusucker version that runs MagiC
only needing a simple change to run a TOS image, it is a case of the
pot calling the kettle black. Thanks Derrik, for selling and supporting
(lots of laughter in the background) a product that performs such a fine
job of vomiturition. The folkes at Microsloth must be proud of you.

Mike

> Having a furthur think <?>

Use the crippled disk to install the software. While installing get some specific parameters and store them with the installed program. On program start just check those specific parameters, if they are still the same you are still on the same harddisk.

On SCSI harddisk systems a very usable parameter is the harddisks serial number. I don't know if IDE harddisk can produce a serial number too, but I would be very supprised when they can do so.

On those systems you can use an easier (but less reliable) trick:
just copy the root and boot sector of the drive. They should stay the same too!
Other intresting parameters are the computers processor, it's speed and memory size.

Bye, Hans

# 3764. FS Atari Lynx/ST stuff, Gameboy, books, etc.

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.022397.145735.26@wxs3-6.worldaccess.nl>
Source record: 127136

This is the February 23rd version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

---

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean) (SOLD)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
Centipede (the Sinister Developments version) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
(SOLD)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all) (SOLD)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
(SOLD)

Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to
get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?) (SOLD)
+Oh No! More Lemmings (totally addictive) (SOLD)
+Lemmings 2 (more addiction) (SOLD)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game) (SOLD)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!) (SOLD)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

---

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

---

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2 (SOLD)
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are

"STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

---

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM (SOLD)

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet (SOLD)
Ninja Gaiden
Rampage
Robosquash (SOLD)
Todd's Adventures in Slimeworld (SOLD)

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 ( INT(x/5)=x/5 ). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing ) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

I'm trying to get some terminal software for an original mac - I'm assuming
it's OS is not system 7. Why, is there software for the ST that mucks
around with the mac GCR format?

# 3767. Help needed setting up "Thing" desktop

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <33107daa82ed41@sn.no>
Source record: 127139

I've been trying to set up "Thing" (vers. 2.09E), but have encountered a few problems which I can't figure out....

-Having opened all the windows I want (for each harddisk partition etc.) I save the setup, but when I restart "Thing" the next time no windows are opened! The window positions are however remembered as they come up as before when I open them. Is this a limitation to the un-registered version, or am I doing something wrong?

-How do I display text files on the desktop, just like TOS does when double clicking any file which isn't PRG/APP/GTP/TTP/TOS?
It seems as if I have to assign a program for each file-type, but I just want to be able to quickly and simply read the text file on the desktop.

-I'd like to add more icons/delete some of the icons I won't ever use from the "icon.rsc" file. Apparently this isn't a normal icon file such as used with TOS 2.06. I'm not able to edit them with "Iconjuggler" nor "ORCS". I've got loads of .RSC files with TOS 2.06 icons which I'd like to add to the "icon.rsc" file... how do I do this?

-I understand that I need to assign a program to the "Printer" icon, so that files can be printed. Which program would I need in order to use a Hewlett Packard "Deskjet 500" printer?
By the way, are there any CPX modules available for this printer in order to "reset" it (as the printer apparently has to be switched on before the computer, and if this isn't done the computer has to be switched off/on again...).

: or am I doing something wrong?

There is an option for this in the "Setup/Windows"-dialog.

: -How do I display text files on the desktop, just like TOS does when double
: clicking any file which isn't PRG/APP/GTP/TTP/TOS?
: It seems as if I have to assign a program for each file-type, but I just

Install a viewer for all (*) programs, this will andle all file-types that
don't have a specified viewer.

: -I'd like to add more icons/delete some of the icons I won't ever use from
: the "icon.rsc" file. Apparently this isn't a normal icon file such as used
: with TOS 2.06. I'm not able to edit them with "Iconjuggler" nor "ORCS".
: I've got loads of .RSC files with TOS 2.06 icons which I'd like to add to
: the "icon.rsc" file... how do I do this?

It is a normal resource-file, atleast I've got no problems editing it with
Interface. Don't know why Iconjuggler doesn't work, but ORCS doesn't
handle colour-icons as far as I know.

: -I understand that I need to assign a program to the "Printer" icon, so
: that files can be printed. Which program would I need in order to use a
: Hewlett Packard "Deskjet 500" printer?

Idealist would be a good choice. I believe 3.7 (Or 3.8?) is the latest
version.

I don't want to interfere, but I just wanted to point out one thing :
the ST game market is DEAD. Games for old systems such as C64, Amstrad
CPC & AMIGA are available on the net because it doesn't harm the
authors.
So why fighting over a few 10 year old games ?

However, I reckon that the market for utilities, such as midi stuff,
still is alive on the ST. So utilities are a different matter IMHO.

Steph

# 3771. FALCON=SYNTH ?

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: Stephane Landier <slandier@icon.co.za>
Message-ID: <33108F7D.4107@icon.co.za>
Source record: 127143
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,

Just one silly idea :
I don't use my Falcon anymore, as I now use a -PC- (I know ;-)...). But it still has a 80MB HD, 4MB RAM a DSP & Midi I/O. That's all it takes to have a Multitimbral synth doesn't it ? So is there a software out there to do that emulation ?

Thanks,
Steph

# 3772. Computer Direct at TAF Meeting March 19th

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: Lianne and Howard <lrhc@interlog.com>

Source record: 127144

**********

COMPUTER DIRECT WILL BE IN TORONTO ON WEDNESDAY MARCH 19th,

AT THE REGULAR MEETING OF THE TORONTO ATARI FEDERATION!

Doors open at 6:30 PM - Admission is free to TAF members

Non-member admission is $2 at the door

======= Lots of software for sale =======
======= Lots of hardware for sale =======

Chris Krowchuk will be demonstrating the ultra-powerful
DirecT60 Hades computer!

The meeting site is located at Memorial Hall in the North York
City Center, 5110 Yonge St. at Parkhome Ave. Go to the lower level
(Concourse). Go to the far end of the complex, to the Library
Building. Memorial Hall is located beneath the Library. There are
signs pointing the way.

Visitors from out of town can take Highway 401 to the Yonge St.
exit. Travel north on Yonge St. for 5 stoplights and you're there!

Wednesday March 19th will be a great opportunity to upgrade some of
your favorite software: NVDI, MagiC, HDDriver, and dozens of other
titles. Tell Chris you're coming to the meeting and he'll bring
what you need . . .

=== for more info, contact: chris@compdirect.com ===
or lrhc@interlog.com

I have to disagree...the atari scene isnt as vibrant as it once was,but
things are picking up with new products coming onto the market.Developers
are hardly going to be inspired to code for the atari market if they see
people on the main atari newsgroup saying hey,its old stuff,so why should
we give 2 hoots.We should be condemning piracy now as much as ever,if not
more.
Just my tuppence worth,
Mark

Absolute balls. Post one more illegal request for copyrighted software
and your postmaster will receive mail from me and quite a few others.
What you want to do is illegal - right or wrong, it is.

If you want it so badly, buy it. If you don't want to pay money, then
you don't want it that badly.

ATB, Frank.

Yep! Only it is hardware and software both. You should be able to pick
up a Spectre GCR fairly cheap here! Not only does it format in the MFS
format, but also the newer HFS format! Even more to the point it lets
you run MAC OS right up to the release before System 7 on an ST!

# 3776. Re: Help needed setting up "Thing" desktop

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <856725800_OASIS_@ping.be>
Source record: 127148

In article <33107daa82ed41@sn.no>
hallvart@sn.no (Hallvard Tangeraas) said:-

>I've been trying to set up "Thing" (vers. 2.09E),

v 2.09E ???. AFAIK the latest one is v1.09E. A typo I suppose.
>
>-Having opened all the windows I want (for each harddisk partition etc.)
>I save the setup, but when I restart "Thing" the next time no windows are
>opened!

The option "ignore open window position" in the setup/windows menu
must be activated if you want that at the next restart of Thing the
windows are displayed.
>
>-How do I display text files on the desktop, just like TOS does when double
>clicking any file which isn't PRG/APP/GTP/TTP/TOS?
>It seems as if I have to assign a program for each file-type, but I just
>want to be able to quickly and simply read the text file on the desktop.

For the most file types 1st-guide is a good choice. You can also
use looknsee (zeigsmir).
>
>-I'd like to add more icons/delete some of the icons I won't ever use from
>the "icon.rsc" file. Apparently this isn't a normal icon file such as used
>with TOS 2.06. I'm not able to edit them with "Iconjuggler" nor "ORCS".
>I've got loads of .RSC files with TOS 2.06 icons which I'd like to add to
>the "icon.rsc" file... how do I do this?

The icon.rsc file is a normal rsc file but it contains color icon
hence that ORCS can't edit then. However if you have Interface you
can add or delete icons at the fly. Remember sometimes you need to
edit the "icons.inf" file too.
>
>-I understand that I need to assign a program to the "Printer" icon, so
>that files can be printed. Which program would I need in order to use a
>Hewlett Packard "Deskjet 500" printer?

I never use the printer option of Thing but for ASCII, RTF or
Wordplus files Idealist is a very good choice. To print pictures
the best solutions IMHO is Imagecopy 4. You can assign the programs
in the Application menu (general and files)

Hope this will help
Martin

You must be crazy!!!??? If you think I'm gonna pay $50.00 for a tos image??? The ST is worthless nowerdays! You can't compare ST software to an IBM compatible... You guys are dreaming?? TOS images in my option are worth 2 cents... Anyway how is someone supposed to evaluate these emulators if they don't have the images!!! If that's the case then don't put out any demos!!!!

Message-ID: <01bc21c3$215fd840$3990b8cd@default>
Source record: 127151

Anyone,

I just purchased an Atari 520ST with monitor and two 3.5 drives. It came with NO software or manuals. I have no idea what operating system it uses, how to use it, and no power cables for the floppies. I paid $20 US dollars for it and bought it because I had never seen one and the MIDI ports on the back. Could any one help me to understand this unit, how can I get it running, where I can get copies of software IE MIDI, Games, ETC. I am an Atari lover. I currently have a 400, 2- 800, 600xl, 4- 2600's, 5200, 7800 and plan to purchase more. Thanks in advance for any information on the 520ST and how I might can get it up and running.

Thanks, Jeff Thomas

Yeah, I seem to remember that there was something to do it, but I also
remember I never had much success with it :/ Your best bet will probably
be to check one of the Atari ftpsites in the disk or utilities section.
try sunsite.doc.ic.ac.uk/computing/systems/atari/umich for starters (UK
Mirror of the Umich site) or atari.archive.umich.edu if you can get on.

If you get *really, really* stuck I'm sure I can help out somehow :)

Yep, it's Ghost-A, a very common bootsector virus. So common in fact
that any shareware/freeware virus killer will nobble it. Try ftp.cnam.fr
in the /pub/Atari directory for starters.

> where on the internet it is. Also, If it is on the Internet, tell me how I
> can transfer the files from my Amiga to his Atari.

If you have one of those Amiga utils which can write an MSDOS formatted
DS/DD disk, just dump it to that - the ST will read the DOS disk as
standard.

I've made some minor changes to the Atari Computing website at
http://www.tachyon.demon.co.uk/ac/ as follows:

* Navigation bar added to the bottom of more pages.
* Some ugly source cleaned up.
* Two HTML errors fixed.
* New news items, which we couldn't fit into issue 3.
* Selected downloads from Reader Disk 3 - in this case, it's the
ST-Guide database files referring to issue 1, created by Norman Bland.

>Another question: what does the abbreviation STE mean? I know thera are also
>Mega ST and Mega STE.
>Bye,
>Guentcho

To answer both questions,

The ST came out in late '85/early '86. The STe came out in '90.

ST apparently stands for "sixteen/thirty-two" (The 68000 processes
32 bits internally, but only has a 16-bit external data bus -- the 68030
has a 32-bit external data bus, hence "TT")
The "e" in STe stands for "Enhanced".

The differences between a ST and STe are:

ST STe

TOS (original) 1.0 1.6x
colors: 512 4096
Hardware Scrolling: No Yes
Stereo DMA Sound: No Yes

Blitter Chip for
faster screen draws: No Yes

RAM configuration: Individual, unsocketed SIMM sockets,
DRAM, required a third- upgrade to 4-meg
party board to expand easily.
beyond 1-meg
256K TOS Sockets: No, requires a third Yes, plug in TOS 2.0x
party board to upgrade and change a jumper
to TOS 2.0x

RF Modulator: Only on STfm models Yes
(use TV set as
display)

Jaguar-style
joystick ports: No Yes
Stereo Line-out
port: No Yes

I think that covers everything.

## 3788. Gemulator classic: observations

Newsgroup: comp.sys.atari.st
Date: 1997-02-23 00:00:00 UTC
From: Mark Slagell <sluggo@ames.net>
Message-ID: <33106443.3AD5@ames.net>
Source record: 127160
Cross-posted to: comp.emulators.misc,comp.sys.atari.st

G.classic is set up and running here on a 133mhz '486 machine. It seems to be very good in terms of speed and quality of cpu and video emulation but troublesome in several I/O areas. I'd like to hear if others have observed (or solved) any of the following symptoms, which if any are known to be fixed in later versions, and which are likely limited to my hardware setup and/or TOS version (2.06). I haven't been able to get the Gemulator 96 demo to run at all, so I'm especially interested to hear from those who have.

1. Serial port: there is no DTR signal. Cannot talk to modem unless I have first sent "at&d0" (ignore DTR, for USR sportster 14.4 external) from outside Gemulator before entering Atari mode. But even then it goes unresponsive after connect.

2. Parallel port: errant characters are sent to the printer for no reason I can think of. Every now and then the laser printer spits out a page with a single capital "E" in the upper left corner.

3. Sound: the first keypress starts a continuous high-pitched tone, not too loud, from both channels (soundblaster clone, forte 16).

4. Floppy: media change is seldom recognized. I have to reboot when changing floppies.

# 3789. New Atari-support Web Page(s)!!

Newsgroup: comp.sys.atari.st

Attention all Atari user groups, Atari BBSs, and Atarians in general!!

I'm currently working on adding Atari support sites to my web page(s) and I'm looking for input from you. If your BBS or user group has a web site and you'd like it linked to, please send me the web address and any pertinent info regarding it. If you don't have a web site, but do have a user group "contact" person, please pass that along.

I'm also looking for interesting sites that support Atari users. These can be user sites, dealer sites, developer sites, and any other type of site that supports the Atari platform. Please send me any and all web addresses.

Please send all "entries" to me at: dpj@delphi.com

To check on the progress of the above-mentioned pages, drop by the following URL: http://people.delphi.com/dpj and follow the appropriate links of interest. I'll be adding Atari gaming links in the near future, along with other interesting items. Thanks!

-Dana

first off, i don't want anyone's TOS images, software, hacks, codes, etc... but this "argument" is so ridiculous, i just couldn't resist posting. the "stuff" about kicking people off for requesting "illegal" services is just korny as shit. sorry, but sounds like a bunch of overgrown kids throwing egos around. if someone was requesting a hacked version of CAF or something, and also wanted a hacked version of Emagic's NL, that would be a bit different. (why? because they're still being produced by companies which support multi-platform applications...) but these are "outdated," overpriced chips, that DO cost more than most of the atari machines you can find used. and if you're not "privileged" enough to own a machine that was fitted to "accept" higher TOS versions, you have to throw in some extra buckage for an upgrade adapter. as much money as i've "sunk" into my atari, i love it, and will continue to use it for my musical needs. could easily use my Pentium 120 Mhz, math co-processor, 1.2 Gb, 32 Meg, blah, blah, blah, to do the same. yes i paid for my TOS chips, and all the software i use that isn't PD. the only reason i'd pay for the damn TOS chips again, is because i simply prefer hardware over software. if TOS was made public domain, there'd be a lot of programs that people could now use, simply because they couldn't afford the upgrades before. thinking on the "elitist" level might make you look like a know it all smart ass, but it doesn't really help the atari "community" in general. this isn't a "call" to pirate everything. i'm speaking strictly about TOS. atari died. the users continue to support the platform. isolating people into groups of have and have-nots, based on the information contained on a chip that atari could probably give a shit about now, is time consuming, restraining, and quite pathetic. i am taking the atari "venders" into consideration. and if they TRULY cared about the platform, and not the money, the prices of the TOS chips, would be quite lower. i know the argument against this, is going to be that the vender has to "survive" on a platform which is "dead" so to speak, but most companies that support atari, also support PC's and Macs. so that argument is quite useless. well, i think something as pointless and numb as this conversation is on tv. guess i'm gonna go tune in...

Could you tell me which one? A lot of the terms used there are pretty
confusing, and to try out all the different combinations will probably take
me a week to do ;-)
I've tried the ones that sound like they should do the job, but I still
can't get it right :-(

>: -How do I display text files on the desktop, just like TOS does when double

Oh, so I *have to* assign some kind of viewer for it then?
I was hoping to avoid it altogether to speed things up a bit. The desktop
slows the machine down enough as it is (using the replacement desktop is a
lot slower than using TOS) Hmmmmm..... makes me wonder- perhaps it would be
possible to customize some EPROM chips and use this desktop instead of the
old TOS desktop- I bet this would speed things up a bit!

Oh, so it's colour icons...
Is there any way to convert them into mono-icons, or make a new "icons.rsc"
file with mono-only icons. I have loads of icons for TOS 2.06 which I'd

like to use. I'm not really interested in buying "Interface" just for this purpose.

3.7 I think. I've got it here, so I'll try it out.
By the way, is there any CPX module around for the Deskjet 500?
I've got a really cool one for the DJ660C (a French module), but all I really need is something that allows me to "reset" the printer, and I don't want to take up another ACCessory slot. A CPX for this purpose would be nice.

I just tried this and it didn't help. Perhaps there's a combination of
other parameters which won't let it work.

How about using the "ST-guide" ACCessory, as I've already got it installed
on the system? Or do I have to use .PRG or .APP programs only?

# 3796. ST Fax 2.5

Newsgroup: comp.sys.atari.st
Date: 1997-02-24 00:00:00 UTC
From: Joseph M Hogan <hoganj@freenet.msp.mn.us>
Message-ID: <Pine.SGI.3.91r.970224115122.13238Q-100000@freenet>
Source record: 127024

Hello,

I am looking for peopel who use ST Fax. I have the latest version 2.5,
running it on a mega STe 4 off of a hard drive, using a Supra 144LC modem.

Sometimes while trying to fax people, I have problems after the first
page. The page will send just fine, but at the end of the page, the
software waits for a signal to tell it o go on to the next page.
Sometimes, ST Fax times out and hangs up. I know that these other
machines work, because I have to use a friends fax to send to document.

If anyone wouldn't mind exchanging a few pieces of e-mail to maybe help
me out, I'd really apprciate it.

Joseph HOgan

From: flook@globalnet.co.uk
Message-ID: <3314d92e.939821@news.globalnet.co.uk>
Source record: 127026

On Tue, 04 Feb 1997 19:38:16 GMT, James@grunt.demon.co.uk (James)
spaketh thus:

I have a couple of questions/comments to add.

>Gemulator96 is an ST/STE/TT emulator
>Gemulator 3.6 (a.k.a. Gemulator Classic) is an ST emulator. It will
>use TOS images from 1.62+ but won't reliably (according to Darek).

I run GEM96 with TOS 2.04 (I think) and also tried it with 1.4 which
didn't work.

>U can get a demo of Gem96 but the current demo has the Atari disk
>format read option blocked but can run full screen. The older demo
>won't run full screen but will allow the Atari format option. I for
>one prefer full screen.
>I'm in the process of testing some games.....

How? I have the virtual drives and can access a few ST discs, but
can't get anything to run. I read somewhere that you need to put the
software onto the virtual drives. Is this correct/possible?

Also, if I try to change the RAM used by GEM it just crashes with
anything but 512K. The text I have seen states that the demo will go
to 2Mb. Any solutions?

Thanks.

Neil.

*Please reply in one group only

Yep, I've been comparing ST emulators.

Is PacifiST supposed to do anything? All mine does is look like an
Atari desktop. There is no hard drive access, no floppy access. I have
the TOS image OK and (I think) all the neccesary files.

Any help gratefully received.

Neil.

Can anyone help me with a few problems using this program?

ST software.

Run STmaster.prg and following the instructions for the standard aux port. However I am unsure what to set the drives to. Local - will C do the job? What about the other drives (the PC I guess)?

PC software.

This is the tricky bit. ;-)

My PC has 4 com ports. Mouse on 1, internal modem on 2. 3 and 4 spare. Is it possible to get the ST linked via null modem to COM 4 (same interrupt as modem)?

The software only lists 2 com ports and always hangs after I press escape. BTW, what speed should work?

Thanks muchly.

Neil.

> ATB, Frank.

there's a program called "Transverter" which will both join together and seperate the 2 parts of a Mac
file(resource fork and data fork). But the Atari disk will not be read by an early Mac unless you have
the special drive and cable(forget the name now). best to use a serial link between the Atari and Mac
and "download" it :^)
Also: there are programs for the Mac, such as _DOS Mounter_ which will read Atari/IBM disks.
but you still have to get it onto the Mac somehow! :^)
good luck.bonne chance
P.S. you could muck around with DCFormat, I think it had a way to format MFS or/and HFS disks.

I'd go with a Falcon(2nd hand)(300-500$??) but if not I'd go with an STe
(1040 or Mega) BUT I've heard of new memory boards out
that can upgrade the 1040ST's and MegaST's past 4MB! So it's a tos up.
with the STe's you get more colours, blitter chips, zzounds! etc. but you're
stuck at 4MB RAM, whilst with the ST's you're stuck at 512 colours, no blitter
(though NVDI would speed things up considerably!)

> The FAQ doesn't seem to have the kind of info I'm looking for. I guess

Well TOS it is, followed by Magic, and MiNT.
for InterNET apps; check out CAB/STiK, TAF's Xwindows Chimera, WebSpace,
and soon to come Termite.

> I think I MIGHT be interested in a 1040 ST, but I don't know if it will
> have enough memory/speed/whatever to be able to do the kinds of things I
> want on it. Mostly, I want to use it for internet applications and the
> like (NETSCAPEish and TELNETtish sort of stuff). Any tips of the best
> word processor around would also be appreciated.

> Thanks you in advance,
> Tony :)

the following stolen from tony smolar [asmolar@localhost.fast.net]
(thanks tony~!)

The ST came out in late '85/early '86. The STe came out in '90.
ST apparently stands for "sixteen/thirty-two" (The 68000 processes
32 bits internally, but only has a 16-bit external data bus -- the 68030
has a 32-bit external data bus, hence "TT")

The "e" in STe stands for "Enhanced".
The differences between a ST and STe are:

ST STe

TOS (original) 1.0 1.6x
colors: 512 4096
Hardware Scrolling: No Yes
Stereo DMA Sound: No Yes

Blitter Chip for
faster screen draws: No Yes

RAM configuration: Individual, unsocketed SIMM sockets,
DRAM, required a third- upgrade to 4-meg
party board to expand easily.
beyond 1-meg
256K TOS Sockets: No, requires a third Yes, plug in TOS 2.0x
party board to upgrade and change a jumper
to TOS 2.0x

RF Modulator: Only on STfm models Yes
(use TV set as
display)

Jaguar-style
joystick ports: No Yes
Stereo Line-out
port: No Yes

I think that covers everything.

good luck.bonne chance

Russ,

Remember, Steve Jobs left Atari and started Apple in 1976, the Atari 400/800 were specifically designed by Atari to beat the Apple ][e. What the Apple ][ lacked in graphics and sound it more then made up with SLOTS!!! Something the Atari's seriously lacked, yes it is true that a few OS boards came out, a few different RAM and RAMdisk boards and even 2 80 column cards (one with color RGB for that matter) I ever recently looked at a photo of what might have confirmed rumors that a long time ago someone designed a 300 baud modem for an 800 slot. These slot however were installed sideways and weren't ever truly taken advantage of. Atari also lost its sight as for what computer it wanted to compete against and instead of producing a 1200XL with more features and better expandability and slots, detachable keyboard, it decided to go after the Commodore 64 and started producing inferior versions of the 800 with little more then cutsy bells and whistles thrown in. Away went the best feeling keyboard, away went the slots, away went the future.

Curt

>ATB, Frank.

I had Sunrise Electronics re-case my Falcon, but this was mainly
because I wanted a 19" rack unit. They did a great job, part of which
was to replace the nasty little 3.5mm jack with big, proper 1/4" ones.
They did a neat thing with the old Falcon case - they just cut the
back off and welded the back-panel to the keyboard and stuck a 5-pin
DIN connector on. It looks like a PC keyboard, but with the familiar
trapezoid function keys!

If you're looking for a rack-mounted case, try them. If you want the
Falcon MkX case, I think Titan are the people to ask. When I made my
enquiries, the Titan and Sunrise options were about 250 UKP each,
virtually the same price.

Regards,

Jim

map your X drive(newly created on the desktop) to the PC's C:\ drive, or
D:\ drive, whichever PC drives you want to have access too.

> PC software.
> This is the tricky bit. ;-)
> My PC has 4 com ports. Mouse on 1, internal modem on 2. 3 and 4 spare.

use com 2 on the null modem(you won't be using your modem and Ghostlink
at the same time, will you? if so, try your modem at com3).
as for speed, experiment, when you hit he right speed your will see
communication text scroll by lickety-spit!

> Please give more detail on IBM boot sectors.

many Atari disk formatters can write an IBM boot sector onto
the floppy disk, without formatting the floppy, or during/after
formatting the floppy. I think DC format is one, FastCopy another,...
>
> >If you format some DS/DD 3.5" floppy disks on your IBM,

well, if you format a floppy disk on an IBM it can _only_ AFAIK
format it to DOS. Although there are some extended sector/track
DOS only formatters out there.

>
>Every version of MagiC is available for Atari, Mac and PC and will be.

Yes, but people in this group keep reporting problems with MagiC such as
booting failure, memory protection failure, and DSP lock ups.

And the question is (as above), 'what is happening with MagiC?'.

Is it still being developed? Are you planning on releasing any
patches/fixes, new versions etc? This question is always avoided and never
answered!! See your above comment, Andreas. No answer about Atari specifics.

I posted in here a few weeks ago asking where I can get an upgrade from 5.03
to 5.04. No replies. Surely, you could make a patch available, so that
existing users can upgrade to the latest version?

Regards, Gary

Harry..... it appears LDW will do just as good a job at Lotus conversions as Texel could do.... last I read here from Mr. Much was that it only handled WK1/WKS files. That's *OLD* Lotus files! I wanted Texel to be able to print my GDOS/Speedo/NVDI printer (in my case, an SLM605) and I suppose I can handle Texel if that's all it does but jeez I was hopin' n prayin' there would be some decent import/export facilities for Lotus/Excel. It appears not at this stage!

Keith

# 3820. Re: MAGIC 5.0 Problems

Newsgroup: comp.sys.atari.st

[snip]
>Your second problem arises when you re-enable MagiC. Oasis stops
>executing Nos when you click on "internet". You circumvent this by
>doing all you want to do in Oasis then quitting it and running Nos
>directly from the desktop. The exact details of this depend on your
>desktop. Basically, you need to install Nos singletasking (it can run
>in a vt52 window but as Nos itself multitasks this can make things
>rather unstable) and pass it a command line of ...
>
>-d F:\OASIS\ -s 40 startup.nos

The best way to do that is without any command line, set an
environment variable NOS_ROOT=F:\OASIS (without trailing backslash). When
NOS is run from desktop it receives all environment variables normally,
it's only when it's run from Oasis internet menu that environment is
empty... an Oasis bug (Oasis can be patched, see my article of 15 Jan 1997
<853354824_OASIS_@nordnet.fr> for that).

Other parameters are not really used, as the "-s 40" is the default
maximum number of sockets, and the startup.nos will be found automatically
in F:\OASIS\...

Bye! Bruno.

No doubt you got it direct from CiX in December before you closed your
account. You may remember that Phil popped up around that time and addressed
the Stoop 2 limitations left over from before his falcon problems.

e> That's interesting. It kinda flys in the face of the dead Falcon so
e> end of Stoop development story. Where did you get it from?

Did my last message on this subject get out? I'm sure I answered this fully
before... Here's that info again...

################################################################################

e>
e> The author of Stoop (whose name escapes me)...

Phil Hodgkins.

e> ...had his Falcon die on him so AFAIK, development stopped at v1.05.
e> He even publicly announced a key for the program to make it free so it
e> looks like that was the end.

He finally got his Falcon back in December (after 8 months of being fixed)
but he'd already gone PC and has now sold it. On CiX he arranged that
someone recompile it without the crippleware restrictions removed and it's
available in the CiX file-lists in atari.st/files96.

I'm surprised this hasn't made its way through Fanfiles on NeST or anywhere
else on the Net. Check with Colin F-M at 42BBS.

################################################################################

Also, I've read Frank's comment that it was a CiX-only release. It may have
been in the very early stages, but my file list doesn't state that at all now

System extensions (File selectors, AES enhancements, clocks etc)
==========================================================================
[cut]
stoop2b1.zip 119331 Stoop v2 beta, boot manager for Falcon etc [SS]

I'll get a new file list and see what it says about distribution.

If I grab it can someone suggest a good ftp site to upload it to?
Alternatively, I guess I could post it to alt.binaries.atari (just to put
something in there other than spam...). Rich, can you EMail me to confirm
the procedure?

# 3824. For Sale..(Canada)

Newsgroup: comp.sys.atari.st
Date: 1997-02-24 00:00:00 UTC
From: Gilles Charron <s1383700@uottawa.ca>
Message-ID: <Pine.A32.3.91.970224200953.825202B-100000@aix2.uottawa.ca>
Source record: 127052

Now that I will be a proud owner of a Falcon, I will have the following
systems for sale:

- 520ST fm upgraded to 1MB with external 720kB disk drive,
TOS 1.0, mouse and SC1224 Color monitor.
- ICD Host adapter with 64MB Hard drive (in a metal casing)
(Hard disk still running but I suggest getting a newer
one. Any SCSI drive will do!).

- MEGA ST4 (4 MB of ram) with TOS 1.4, blitter Chip,
mouse and SC1224 Color monitor.
- Megafile 60 (64MB Hard drive).

- 4 to 5 joysticks

These systems are in great condition, the only reason for selling is that I
have upgraded to a Falcon.

A few applications:

EZ art professional, Pc-ditto, Dc Desktop, Squish II, Data Diet V2

MIDI applications:

Concerto, Replay sampling cartridge and software

I also have the following games for sale:

Pro tennis Tour; Out run; The games (olympic);
Test drive II (the duel) with scenery disk and Car disk;
Winter challenge; Summer challenge; California games;
international championship Athletics; Jahangir Khan Squash;
Kick off 2; Operation thunderbolt; Leatherneck; Tv sports Football;
Populous with The promised lands Disk; Elite; Voyager;
Micro League Baseball; A day at the races; Space Ace; Vegas Craps;
Vegas Gambler; Archipelagos; Lombard Rally

And more, Make me an offer!!

Following for sale:

MEGA STE/4MEG(removable SIMMS), TOS 2.06, 52MEG internal Quantum, Golden Image cordless trackball, Atari Mouse,
asking $250. With AlberTT VGA card, $350.

SLM804 Atari Laser, recently changed drum, works great with Atari Works!,
asking $150.

SC1224 Atari Color Monitors, refurbished $55(original box); used $45(good condition).
SM124 Monochrome monitor, used, works great, $50.
PCM124 Atari PC Monitor, new, 9pin connector, original box, asking $55.

SCSI TOWER: 85meg Seagate HD, Sony CDU-541 CD DRIVE, ICD 155MB tape drive(5 extra tapes), 540 meg FUJITSU(new) HD, 50meg Seagate HD(new), 50meg
SeagateHD, 6 SCSI devices in all, wired together in one new case with powersupply/fan with single output to LINK 2 SCSI Adapter, included with cable: recently constructed asking $550

Tower will boot automatically to any ST/STE without internal hard drive.
Full instructions to install to MEGA /ST/STE/TT with internal hard drive.
ICD driver software, tape backup software and ExtenDOS pro included!

1040 STF's, 1 meg, good used condition, tested, $65.

Plenty of software with original box/docs to be sold soon!

Jaguar Game System with CD Player, 2 controllers, Raiden, Highlander CD, Braindead 13 CD, Tempest 2000 Soundtrack CD, Blue Lightening CD, MYST Demo CD, Vid Grid CD, like new, asking $150.

Aerochopper R/C Aircraft/Helicopter Flight Simulator.
Includes actual Futaba 'Conquest' 4 channel controller that plugs into the
cartridge slot on an Atari ST. Software, manual and original box included.
Excellent program for a 1 meg Atari.
asking $125.

Buyer pays shipping costs. Ship via UPS COD to USA and US Post Office to Canada ONLY!! Dan F.

software list to follow...
All prices is US dollars.

>
> Talking about ARJ, is the shell ready or wont there be any specific for
> ARJ?

A preview of the shell was released at the Atari Messe in Neuss, Germany. The only copy I gave away has found it's way over the world under the name ARJ_997B.* . I didn't make it a major release becauseit will only work on computers with 4Mb or more (maybe on 2 Mb machines, didn't test that). This is due to the new compression engine. While atempting to write better code I alway work on the biggest, best and fastest engine. When I think it's finished I start working on versions for computers with less memory (at the cost of compression speed and ratio). In ARJ 9.97B only this version was ready.

Now back to the shell: the one released works, but anyone can see a lot of coding still has to be done on that one. It also doesn't support the new LZH compatible compression mode of the TTP. Last months I spend most of my time coding a game, the only thing a did on ARJ was some work on the depack routines, so it's still in the same state as it was in november. But don't despair, I am getting quite bored by game programming now, so I will be quite happy to continue with ARJ when the games is totally finished.

Bye, Hans Wessels

jacquesa@cs.man.ac.uk (Anthony Jacques) mumbled indistinctly:

>>BTW. Has anyone heard from Craig at all?

>Nope, I haven't. ;-/

>I tried to get him to say something by posting to the XaAES mailing list,
>but no response. :-|

>Anyone?

Sorry, I've been out of the country since December (pretty much
continually) - first Ireland, then Hong Kong. Well, I'm back in
England now...

Bought a Nintendo64 in Hong Kong, gotta say that the gfx
are stunning :)

What's happened with XaAES recently? Well, not much really,
although I've picked it up again since I got back. Still having
problems with menus :(
I replaced the menu handler with one that uses object tree's
correctly, but Lattice C puts PROGDEFS into a menu. I know
for a fact that my progdef support code works with other programs
(the desktop in Thing is one big progdef, and several other programs
using them work as well). Well, the Lattice ones crash XaAES for no
apparent reason (Privellage Violation). I'll trace it, but not quite
yet...

>Anthony

So, still trying - I'll get back to the world when I've made some
progress.

Craig.

Hello everybody,

in order to upgrade the RAM of my 1040 STfm I need to know some data,
such as speed, pins etc. of the SIMMs, as there is not Atari dealers at
this side anymore and I guess I wil have to try my luck in some PC
shops. Any other idea to upgrade is always welcomed!

Thanks in advance!

SS> 8~))

We make all these complaints and figure out whatever solutions we can, but no-one at all seems to be able to say whether any development is going on with Magic to resolve these issues.

Andreas is here to answer some issues, and obviously he understands a lot of issues surrounding Magic, but it's clear that he's not responsible Magic itself - just MagxDesk.

Can anyone tell us what is happening to Magic on the Atari side of things? We can all guess that MagicPC and MagicMac are being actively developed, but what about Atari specific issues? Are we only going to get the dregs of the upgrade benefits from the other two?

We can all guess that the answer is 'yes' but does anyone (with access to the Mausnet, perhaps) really know?

The following items are for sale:

VideoMaster digitiser and colour splitter for the Falcon. 40 UKP

Clarity Falcon, direct to disk sampling package with DSP clock
cartridge. 40UKP

MagiCMac 1.23, turn any Mac (68030 or better, or a PowerMac!) into an
Atari compatible mean machine. 50 UKP

Calligrapher Gold. WYSIWYG wordprocessor. 20 UKP.

View II, file viewing program. Designed for integration into the desktop.
Handles many file types (SEQ, pictures, samples, text, etc.) 5 UKP

Timeworks 2 plus two manuals on Desktop Publishing with it. 15 UKP
(inc. P+P).

Epson FX80 emulation cartridge for DeskJet, Deskjet+ and Deskjet 500.
12 UKP.

E-Mail me with any offers for items you may want.

u> kl.de/pub/atari.

That rings a bell...

IIRC Magic4 didn't like ICD driver software if the partition scheme being
used was not marked as AHDI compatible.

The solution would be to either get a new driver (AHDI, HDD etc) or back-up
and repartition with a more recent version of ICD that gives the AHDI
compatibility option.

> BTW - the PC has a SCSI card.

Other options to consider are Ghostlink, which would probably work
running
full-time on a Windows PC. This allows the PC to act as a server, and
file manipulations are possible from the ST. Serial xfer. My highest
speed=57600. Available from Umich and cnam, among others...

PARCP, which looks really neat and fast, but I don't have a bi-parallel
port
to test the thing on, and I'd have to build a special cable anyway.
Supposedly
much faster than serial communications. Can't remember the web page...
a search should find it.

You have a SCSI card on the PC. I've never tried this, but I can't see
any
reason why you couldn't just make your partitions on the ST SCSI drive
readable
by a PC, power down, then hook the drive up to the PC, copy the files
from the
drive.

There was a thread a little while back on keeping everything on
simultaneously,
using drivers that can handle SCSI arbitration, but there seemed to be
too much potential for errors/corruption if everything wasn't perfectly
arranged.

The SCSI hookup seems like the easiest for large files... Short of a
removable Jaz or Zip, that is, which would still use the same concept.

Good luck and all that.

: >those tos images ?? I can't find them anywhere!

Yeah...John Lennon is dead to...but that don't make it right copy his
records and give-um away. A Beatles record still cost around 15 bucks,
and it's still worth it (to many...guess not all). Same with TOS...
So...buy some ROMS from someplace and make your own images.

## 3842. PRHELL and Usenet newsgroups

Newsgroup: comp.sys.atari.st

Hi All!

First some bad news. KillThings (Doom clone) is no longer being developed by DigiTallis (Boo hoo! :(

Some Good news. The source code and executables are now on the DigiTallis Web site as PD! :)

I have down loaded it and I think I might be able to finish the coding! (Just got to define a level file spec, put in level loading routs, add game logic, finish off the level editor, etc, etc. A big job, but once I define the level specs, then It should be a lot easier. Tell you what though, perhaps some other programmers out there would like to lend a hand? If we can define a common level file format, then we can all work together to get the game finished!)

Yeah!

Bye for now!

Brian!

>You made a grave mistake there, asking publicly for pirate software,
>did you know, that because of scum like you, developers no longer
>produce software for the ST. If I ever met you, I'd punch you out,
>and I'm *not* a violent person!

And there was me thinking that games stopped getting produced for the ST
because:

a) the PC became a decent machine
b) good consoles arrived
c) Atari had no idea how to market a good machine
d) Atari had no idea how to make a good machine better
e) Atari had no idea, full stop

I doubt piracy ever even made a dent in developers' pockets. Most people who
pirated would never have bought the damn games anyway - how is that a loss to
the developer?

Old argument anyway, and boring...

Well you don't say what's going wrong really. but you do need Windows 95 (and a PC a little speedyer than a 486 DX4 100) and it should tun with no problems. If you do have a slow(er) computer then try just running the demo in ST high rez.

From: postmaster@bassment.demon.nl
Message-ID: <856778844_OASIS_@bassment.demon.nl>
Source record: 127088

Hi everyone!

I'm having trouble getting an SLM804 laser printer to work. Naturally I switch it on before the computer, have connected all cables correctly and there's no device conflict.
Nevertheless, none of the software I have for it (Diablo emulator, FX80 emulator, Calamus printerdriver and the TEST.PRG supplied with the Diablo emulator) is able to "detect" the printer, they all give messages like "printer is off line or not connected" or "SLM804 not detected". The controller LED flashes everytime a program tries to send something to the printer though.

Is there a definite way to see if the controller is busted? Shouldn't the TEST.PRG be able to print without any other driver-software installed, in other words, is this a hardware problem? Any help is greatly appreciated!

Thanx,

Maurits.

> Could someone please post the original article in this, from this snippet it
> sounds too weird for comprehension.

I havn't got it, but what it basicly said was.

Steve Cohen of Wizztronics had called Chris Krowchuk of Computer Direct on
his toll free number (he couldn't afford the cost of the phonecall ;-))
saying that he had bought Atari (still can't afford to pay for the phonecall
but he said that he had bought Atari) and that they would sell a $1500 Falcon
compatible computer. As Steve used the toll free phonenumber, Chris didn't
want to talk to long with him as he had to pay for the phonecall, so he didn't
ask anything more about the deal or computer.

:-)

I guess we have to wait until the moon fall down to hear who is mad or not.
Maybe it's all true? It could be.

From: d@mail.sstar.com
Message-ID: <5ers89$4r9$3@kiyoko.communique.net>
Source record: 127093

->I am surprised how few hardware hacks there are out there for the Atari ST.
->At least in english. If you can read german it's a different story. Anyone

Its just my opinion but I think Americans, when we get tired of using
a machine, would just rather buy a newer, better or different machine.
You know, like a new car every 5 years or so. But the Germans would
rather fine-tune the machine they have now. Its more efficient, eh?

->know about some good hardware hacks on the internet for the st that are in
->english? Like building a harddrive interface, or adapting IBM high density
->drives. I'm talking about build yourself projects not stuff you buy.

I'd like to do some hacks myself. The one where you modify and
burn TOS 4.04 into EPROMS (with the Star Trek logo instead of
the Atari bootup logo) would be cool to do. But the problem is you need
to have a bunch of technical talents to do it. Patching TOS is easy, but
etching PCB boards is hard, at least for me. And if the plans are in
German, you need another talent (or another person on your team). The
days of Atari clubs, with members pooling their knowledge are over.

Ehh... so this is what they call "memory protection"? I would call it "memory
detection" or something similar. Doing it this way it doesn't do any good at
all! You still has to reboot the computer.

> MiNT works in another way: It use the PMMU to watch the memory. If a program
> uses memory that it doesn't own, MiNT get this and terminates the process,
> who is illegal writing or reading from a memory block, it doesn't own. For
> this methode you had to have a PMMU, only with CPU from 68030 and up
> available.

And why not incorperate a version for 030 and up then? There are alot of
Falcons and TT out there. Is it because they think the market is to small?
I guess it wouldn't work on MagiCPC or MagiCMac either (maybe the 030/040
MACs) and maybe that is what 2B are working most on now days.

I still think they shouldn't call it memory protection as in the wasy I
see it, it isn't. Meybe we could sue them for false marketing? ;-)

> From my point of view MagiC could not prevent the damage of data or program
> code while the id code of the memory block is leaved intact; and it teminates
> IMHO the wrong program..

I'm not sure what you ment by that, but I do agree with you that MagiC terminates
the wrong program. It commits suicide! :-)

IMHO. Pac Man in E's stinks. If you have got a Falcon you _must_ get
Pac Theme. It's the best Pac Man clone I have ever seen or played. The graphics
are excellent. The sound is great and it plays very well indeed. One if the
best games available for the Falcon. It even runs beutifully on my
Afterburner040 under MagiC or whatever you try it on as long as it's a
falcon of some sort.

There has been alot of talk about old games software for the Atari.
As you all say there are still companies selling some of them, but
there are also millions of games that noone cares about anylonger.

I know this would be realy hard, but wouldn't it be possible to find
those games that companies doesn't care about anymore and make them
available somewhere free for download? There must be _alot_ of
games which could be placed here. I guess it would be rather hard
to find out which though, but I think it could be a realy good idea
if it was possible. Not only for us, but for our platform as well.
People could start discoverng all those games again and people
could actually be interrested in getting an atari becuase of
all those old but still very good free games.

And if we are lucky the ball could start rolling again as more
people would be interrested in the old atari as a lowcost
option for people who doesn't care if the games look like they
do on the SuperNintendo or high spec PC and we might even get
some new! Hehehe... believe that if you like. :-)

It can't be very hard to find which games which couldn't be placed
here as they can't be that many who are being sold these days, or?

Possible?

> don't even exist anymore! All the 8 bit stuff is available for download...

Yeah, I think he has got a point there. Don't just jump on him, but think.
I think he might be correct in one or two places.

And what about all those companies that doesn't excist anymore? Can someone
realy still claim the rights for it? Maybe they can, I have no idea, but
it could be worth looking into.

Also writing to some of the companies who still are in buisniess and ask
if it would be alrigt to release them as freeware. They could actully
gain some of it as well. Let people play their old games and get
interrested in their new. Noone can buy most of the old games nowdays
anyway.

# 3860. KEMD_rev2.zip available./

Newsgroup: comp.sys.atari.st
Date: 1997-02-24 00:00:00 UTC
From: Katherine L Ellis <kellis@primenet.com>
Message-ID: <Pine.BSI.3.95.970224062837.15077B-100000@usr07.primenet.com>
Source record: 127101

I am pleased and proud to annouce that KEMD revision 2 is available on
my homepage and soon on several ftps.
what's new?:
hmm deeper comments, 2 changes that will allow you to set your local
network easier, the AEs 4.1 instead of the AES 4.0. 3 German sentence
that were not translated but are now.
Well and maybe other little things like that.
" for those who don't know what KEMD is: KEMD= KGMD but english, KGMD
being the Mint distribution kit from Knarf. With it you can get PPP, a
full unix environment and a stable multitasking OS. You have the
possibility to have your own network, and communicate with the world
directly, your own local ftp, telnet, http etc."
Requires at least 4 meg to install it correctly and at least a 36 meg
harddrive. The faster ther bigger, the better :) "
bye.

>file ?
>
>help me, i have more than 100 tune to convert ...

This would be pretty hard because the formats are so different - Quartet stores the samples in a separate file, the song data commands probably don't all have exact equivalents in *.MOD format and the samples will need retuning too (Quartet uses a different base frequency) which will make them sound crap etc you get the idea :-/

Are they particularly good tunes? Standard trackers are pretty easy to use so you could spend those boring Sunday afternoons to convert them manually :-)

Read my WWW pages. :-)

Its a utility that all GEM programmers should have because it tells you
how to add about 2 lines of code which gives support for system-wide
sound effects (using SAA files) - its Kosmik Phish SAA Construction Kit.
Damn cool, and should be in all modern GEM programs. :)

We have had a slight problem (not our fault but I have fixed it) which
has slightly delayed release. Should be available on friday though?

>BTW. Has anyone heard from Craig at all?

Nope, I haven't. ;-/

I tried to get him to say something by posting to the XaAES mailing list,
but no response. :-|

Anyone?

Anthony

Someone could always contact the game authors (or whoever owns the game copyright) to ask permission
to distribute their games on the net. I know this has been done for the ZX Spectrum games floating
around on the web.
Obviously if authors don't want their games freely distributed then they shouldn't be, but I should think there are a few authors out there who would love to see their games distributed.
This is just a suggestion to avoid all the "pirated games" posts on here.

*8^)

## 3868. Family Tree bug

Newsgroup: comp.sys.atari.st
Date: 1997-02-24 00:00:00 UTC
From: mnb20@cam.ac.uk
Message-ID: <5es3qm$9j4@lyra.csx.cam.ac.uk>
Source record: 127109

There was a minor bug in Family Tree 2.27.

It only affects medium res users, and only English ones. I'm not sure why
but the resource file included in the archive was wrong and doesn't work.

I have just uploaded a corrected archive to cnam, it should appear in a day
or two. If you have already downloaded a version with the wrong resource
file in, a corrected gen_8x8.rsc is available for download from my
computer, mnb20.pet.cam.ac.uk

>from the drive.

There is a reason. The partition table is in a different format. Although
the data within the partitions is compatible, without the right partition
table the discs won't be readable.

HDdriver 6 has the option to use a PC compatible partition table instead of
the normal atari one used by other drivers and older releases of HDdriver.
However I don't know whether it's possible to switch an existing drive to it
without reformatting. If you have a scsi disc on the PC, you could use that
with HDdriver 6.

Well, as I have done my own code (based on yours ofcourse) I only have
to add one line of code to get sound effects (okey 2 lines, one
more at startup to load the sound). :-)

Anyway, cool!

Yes I agree. The problem might be to get hold of most people and those companies
who still excist from the good old days wont probably even bother to answer.

But I still think it could be worth it and and if we can't get hold of them all,
only some of them would be a start. There are _many_ old games for the ST.

And how is it with the companies that doesn't excist anylonger? Do they still have
the copyright of the game?

# 3875. ATARI RETIALER GONE OUT OF BUSINESS.

Newsgroup: comp.sys.atari.st
Date: 1997-02-24 00:00:00 UTC
From: modemkid@gate.net
Message-ID: <3311a09f.758223@news.gate.net>
Source record: 127116

Atari retailer closed down. Left with 1000's of ST software. Mostly games, some productivity, no newer software. These items are 2+ years old. But brand new in the package. Make up your list of wants and needs and email at modemkid@gate or call 561-464-0019. Between the hours of 1pm-9pm est. Ask for Gary. No ST lists. Have your list ready.

# 3876. HELP: Nedd Atari ST/Mega/TT Info

Newsgroup: comp.sys.atari.st
Date: 1997-02-24 00:00:00 UTC
From: ajbufort@mail2.sas.upenn.edu
Message-ID: <5es81j$om@netnews.upenn.edu>
Source record: 127117

Hello all...

I'm a little old 8-bitter, Atari, of course, who's finally
looking to upgrade to a more modern machine. :)

What I really crave is a Cyrix, but that's a ways above my budget
for the time being. I love most things Atari, and I thought why not
check out the Atari 16-bit line as an interim alternative to my final goal.

BUT I NEED INFO!!!

The FAQ doesn't seem to have the kind of info I'm looking for. I guess
one could say it's in the realm of the very basic. What are the
differences between the machines? Can one surf the net reasonably fast
on an Atari? Are these machines potentially compatible with Macintoshes
in some way? What's the best or most commonly used OS out there for the
Ataris? I've heard some things, but I need a clear breakdown.

I think I MIGHT be interested in a 1040 ST, but I don't know if it will
have enough memory/speed/whatever to be able to do the kinds of things I
want on it. Mostly, I want to use it for internet applications and the
like (NETSCAPEish and TELNETtish sort of stuff). Any tips of the best
word processor around would also be appreciated.

Mostly I'm nervous because I don't want to buy a machine that does less
when for a few more bucks I could have had a machine that does/has more.

Thanks you in advance,

Tony :)

# 3877. Re: Where to post Atari items for sale

>You must be crazy!!!??? If you think I'm gonna pay $50.00 for a tos
>image??? The ST is worthless nowerdays! You can't compare ST software to an
>IBM compatible... You guys are dreaming?? TOS images in my option are worth
>2 cents... Anyway how is someone supposed to evaluate these emulators if
>they don't have the images!!! If that's the case then don't put out any
>demos!!!!

Then why is it that you want it so bad?
Are you just a clepto?
If ST software is worthless, then why even bother?

As far as the emulators are concerned, call the support
number that comes with one:)

Gemulator or any of the other emulators are not going to
make a dent in the TOS software market.
The people that want to run the emulators usually are those
that find something missing in their life and want to return
for a taste. Ruby slippers are not free.

You make no sence whatsoever.
Reply if you wish. Your just a dwip and i'm sure you'll get your
image in the end. That's my final word in this thread.

# 3887. Setting up a 520STfm

Newsgroup: comp.sys.atari.st
Date: 1997-02-25 00:00:00 UTC
From: kparks1@osf1.gmu.edu
Message-ID: <5evoa7$l2u@portal.gmu.edu>
Source record: 126922

I just purchased a 520STfm, it came without any software and no mouse. When I power it on it
seeks the floppy drive and the sreen is black with a white border.

In the user's guide it talks about using a language disk to boot the machine. Later it says this is the fastest way to boot and that TOS is in ROM and the GEM desktop should come up eventually.

Do I need the language disk in order to boot? If so where can I get such a disk? Otherwise, is
it broken and if so, where can I start to look to fix it? Are there schematics on-line somewhere? etc,
etc.

TIA,
-KP

If this is to reset the printer when you need to print but forgot to turn
the printer on before the computer, I have two programs which will do it.
One is executable and the other is an accessory. I'll email them to you if
you want, they are 1.5 and 2.5K (compressed).

Hi There

I think you are a bit confused about DEV_FPRN.DEV all you do is put
it in the auto app or what ever in the magic set up and forget it.
Print out using your normal nvdi print driver. This is actually faster
than outburst. I tried doing what you are doing and nothing changes.

This is really a print routine fast code patch like outburst.

Using the same full text pages in Papyrus printed at 300 dpi HPL5 takes 19
seconds from button press to eject from printer. Outburst 3.3 same
23sec.

Try it. I use a TT with MagiC 5 NVDI 4.1.
Regards

Who ever is responsibe for saying it. ASH or 2B or you or who ever it was
who said MagiC has memory protection. I don't know.

Will MagiC take use of the MMU (on 030 and up) in the future to give us as
good memory protection as MiNT has?

I am very close to the gaming industry, as I used to develop utilities
for game companies on the ST (Edmap available at ftp.cnam.fr is one of
these). I can tell you that the ST doesn't have any marketing relevance
since 92 or maybe 3. Unfortunately it is marketing that feeds developer.
However, don't flame me ! I love my STe, and my Falcon ! I also have an
Amiga 1200, a C64, an AMSTRAD CPC and I love them all :-)

Steph

# 3904. again: screen in Pacifist!

Newsgroup: comp.sys.atari.st
Date: 1997-02-25 00:00:00 UTC
From: mvogel@coli.uni-sb.de
Message-ID: <5eup93$6iv@coli-gate.coli.uni-sb.de>
Source record: 126987

Since there weren't that many answers, I would like to ask my question again:
Did anyone else notice that the screen is always inverse in Pacifist?
(What should be light, is dark and vice versa, for example desktop elements like drive symbols are dark, all in all, the screen looks bad this way)?

I only refer to *monochrome* mode (high resolution)!!

In medium resolution, the colours are o.k. and changes can be saved with the help of control.acc, whereas control.acc is of no use in monochrome mode for me:
Nothing can be changed, nor is anything different after trying to change something and rebooting.

Perhaps the author could also contribute something to this question.
Please, don't misunderstand me:
I do not want to complain, because I see that the program is just being developed more and more and offered for free; therefore, I am really thankful.

So once again:
Any solution welcome

Manfred

Magnus, the shareware program ST-Tools will do it very well also, but only
if, as you said, nothing has been written to the disk since then. ST-Tools
will find the file with the first character replaced with a " * " which lets
TOS know it can use that space now. Replace it with the right character, and
you will have your file back. Good luck! ;)

Which Atari retailer has the best Falcon Ram Prices?

I would like to take My Falcon to its full 14Meg Capacity.

Are the Falcon Memory Chips more reliable than Memory Boards that accept
Simm
Chips?

Thanks!

escaisey@ibl.bm

# 3907. Re: magic problems

Newsgroup: comp.sys.atari.st

> Is it still being developed? Are you planning on releasing any
> patches/fixes, new versions etc? This question is always avoided and never
> answered!! See your above comment, Andreas. No answer about Atari specifics.

Well I don't think we should only complain on Andreas, but there are one
or two problems with MagiC.

I have been told that there is an update of MagiC soon to be released which
is going to be 5.10. I got some info on what was going to be fixed, but it
wasn't very specific and it was most abaout some new features like realtime
moving and resizing of windows. No support for more AES 4.1 calles from what
I could tell. :-(

Maybe they (Andreas as we have never seen 2B in this group so they might not
even have email) could put together a bug/problem report that we could add
to? It wouldn't be to hard, or someone in here could do it and then mail it
to Andreas. Ofcourse, he must read it as well or it's rather pointless. :-)

Another "slight" problem is that Andreas hasn't got a Falcon. :-\

This would also show us that they realy care and want to produce the best OS
for us TOS addicts.

> I posted in here a few weeks ago asking where I can get an upgrade from 5.03
> to 5.04. No replies. Surely, you could make a patch available, so that
> existing users can upgrade to the latest version?

Yes, this I find a bit stupied. Why not make a patch available for people to
download and update their copy. Geneva has this and I have not heard any
problems from that system and it makes it ssssooo much esier for many people
to see to that they use the latest version and so that the MagiC team can
atleast get ridd of all those mails about problems witch has already been
fixed in later versions.

Hi!

Just been fiddling around with MSA 2.3+ for the first time in ages and got thinking about the .MSA files that this program creates.

Does anyone know the file format of these? How are the sectors/tracks stored if you turn compression off? What kind of compression is used if you switch it on? Is the source code available anywhere? And is the author's email address (included in the on-line help) still valid?

A lot of questions, I know, but hopefully there'll be one or two answers out there.... :-)

Thanks,

Blood.

Perhaps not, but you have used a Netcom address in violation of Netcom's
copyright and trademark, and /they/ can certainly afford to prosecute.

(1) If the ST is "worthless" you have no need to "evaluate" anything written
for it.

(2) TOS2WIN doesn't require a TOS image.

(3) If you desperately want to be hassled by your ISP for violating
international (and in your case, I think, US) copyrights, keep posting
pro-piracy articles. If not, keep your conversations private. No one
complains about what they don't know about. A word to the wise should be
sufficient.

>
>And how is it with the companies that doesn't excist anylonger? Do they still have
>the copyright of the game?

They do... Often they have been wound up or liquidated... but the
liquidator owns the rights. Take a good game like DEUTEROS. Programmed
by Ian Bird for Activision which, if I recall, went into receivership.
That means, most likely, someone bought the rights and it would be
HARD to find the current owners... but they might find you if you
distribute the games....

Damned pity IMHO!

James R. Lendino (jlendino@panix.com) wrote:
: I'm looking for some information and resources on setting up a Mega
: 4STe for music. I know standard MIDI terminology and have been
: working with keyboards for some time now, but would like to get this
: particular machine rigged up to some keyboards.

This is an excellent machine for MIDI. The extra speed (as opposed to an ST) is very helpful.

: 1. What interfaces are available? I'm looking for at least 48
: channels and a couple of MIDI ins.

If you were to purchase Emagic Logic ($349), this is accompanied by the LOG3 Interface, a combination dongle and MIDI expander. It has three additional sets of 16 MIDI channels (48 + STe's 16) on it's four MIDI out ports (two of the ports on the LOG3 output the same information). This gives you a total of 64 MIDI channels.

MIDI ins are much harder to come by. The Emagic Unitor II ($349) offers two outputs and two inputs - used with LOG3, this provides 96 MIDI channels and three MIDI ins total.

On my system, I added a Kawai MM-16 MIDI Mixer, providing MIDI merge capability, effectively adding an additional MIDI In. There are a wide variety of (usually expensive) MIDI merge boxes.

Other options include:

Emagic/C-Lab Export (Not for Falcon) serial port - 3 MIDI Outs - $129
Steinberg MO-4 - Parallel Port - 4 MIDI Outs - $199

: 2. What about software? Mainly I am interested in Cubase and Notator
: (Logic? is that the same thing).

Notator SL ($249) came before Logic, and some early versions of Logic were called Notator Logic. They are not the same. Notator and Logic are fairly different (I still prefer Notator) and Logic is sluggish on a Falcon, so Notator may be the better option.

I haven't had much experience with Cubase so I cannot speak to its sequencing abilities or speed.

: Finally, does anyone have some equipment like this to sell? How much
: should I expect to pay?

Retail prices are listed in the above, from the Toad Computers catalog 1-800-448-8623

Hi Gary,

Before you buy a ZIP drive you might consider a SyQuest EZ Drive(135meg cart)
IMHO, the SyQuest is faster and uses a better technology. The price here
in the US is the same as a ZIP drive, about $125. The cable to connect to a
Falcon cost anywhere from $29 to $60 ;)

There is no such thing as Falcon memory ships AFAIK.
You can purchase a Falcon memory board that takes 4 - 4MB RAM 30 pin SIMMS or
a board that takes 1 - 16MB RAM 72pin SIMMS.
I've used both(Wizztronics, Systems for Tommorrow), and both work fine.
4 30pin SIMMS _may be_ cheaper. make sure they are all the same kind!
good luck.bonne chance

> (Logic? is that the same thing).

The three biggies are Cubase, Notator and Logic. I'm not a Cubase fan, and have both Notator and Logic, and I think Logic is great. Development for Atari for all three of these programs has basically finished.

Logic comes with a cartridge-based interface, containing another three independent midi outs, giving you 64 channels to play with. All programs can be expanded with other interfaces to give more independent channels.

> Finally, does anyone have some equipment like this to sell? How much
> should I expect to pay?

Notator can still be bought for about 150 opunds, Cubase is still available, and Logic is about 250 or so. You may have to look hard for Atari versions though, as most music shops these days stick to the Mac/PC brigade, who usually have bigger wallets...

1)don't write anything to the disk you deleted the files from.
2)get Atari's CHKDSK3.PRG,[ftp.uni-kl.de \pub\atari\disk\chkdsk3.zip]
It's PD and you can use it to undelete your file/s
It will also defragment your hard drive.

>LOG3 Interface, a combination dongle and MIDI expander. It has three
>additional sets of 16 MIDI channels (48 + STe's 16) on it's four MIDI out
>ports (two of the ports on the LOG3 output the same information). This
>gives you a total of 64 MIDI channels.

[snip]

>Other options include:

>Emagic/C-Lab Export (Not for Falcon) serial port - 3 MIDI Outs - $129
>Steinberg MO-4 - Parallel Port - 4 MIDI Outs - $199

Are these reliable? i.e. dropped notes, lockups, etc. It is
promising that there are still many options available but it seems
impossible to demo any of them without plunking down the cash first.

>: 2. What about software? Mainly I am interested in Cubase and Notator
>: (Logic? is that the same thing).

>Notator SL ($249) came before Logic, and some early versions of Logic were
>called Notator Logic. They are not the same. Notator and Logic are
>fairly different (I still prefer Notator) and Logic is sluggish on a
>Falcon, so Notator may be the better option.

It appers that Logic has since been revamped extensively for the
PC/Mac versions, whereas Cubase is largely intact but with new
features.

Thanks for the info; it was very helpful.

Regards,
Jamie

# 3927. Atari Transputer Workstation

Newsgroup: comp.sys.atari.st
Date: 1997-02-25 00:00:00 UTC
From: rich@rjelwell.demon.co.uk
Message-ID: <856906636_OASIS_NEWS@rjelwell.demon.co.uk>
Source record: 127010

An Atari Transputer Workstation (Abaq?) happened to come in to my
possesion earlier today (lucky me).
As of yet I haven't got a suitable monitor or leads to get it fully
up and running yet and, of course, it may not work when I do.

Having taken the cover off I can tell you that it is basically an
ST (with Rainbow TOS 1.4) in a huge tower case with a mother of a
mother board which is the transputer bit. There is also a SCSI
adapter of some sort and a daughter board (called a Farm Card, I
think) with 4 transputers on it.
I gather that the ST is really just a front end for programming the
transputer bit.

I am posting here to request if anyone has any info on the ATW
could they let me know. I am not really sure what to do with it.
A web search only turned up a brief tech spec and someone at umich
who wanted to buy and ATW to add to a collection of obscure
computers.

Rich.

Hi all!
I want to start with installing latex. Can anyone tell me wherefrom I
get the binaries for the following program:

1. Latex
2. dvips
3. xfig
4. ghostview
5. Gemacs

I have the option of installing them for SunOS 4.1.3, or SGI or Linux?
Any suggestion for installation shall be greatly appreciated. I would
prefer the simplest and fastes way to get going.

Thanks very much.

>520ST and how I might can get it up and running.

Jeff,

The OS is TOS (most likely version 1.0, and most likely on ROM - if you
didn't get any disks, and if the system is one of the very earliest models,
you don't have an OS, but the most common case is TOS-in-ROM). The user
interface is GEM (originally from DRI) and somewhat resembles the Mac and
Win95 interface.

Even without the floppies working, you can turn on the system, wait a minute
or so, and get the desktop. Can't do much with it, of course, but that will
verify that it's working, at least.

For parts, take a look at http://www.teleport.com/~atari/vendors.htm - Ben
Smith and Best Electronics both handle loose parts like floppy drive power
supply "brinks."

In case you didn't get a mouse, you an simulate one using the ALT key in
conjunction with the cursor arrows; ALT-SHIFT gives you fine control, and
the two keys immediately above the left and right arrows work with ALT as
the left- and right-click.

You might want to try the Totally Unofficial ATW800 Page at:

http://plato.digiweb.com/kiffer/ATW/index.html

I spent a full hour or two checking specs and perusing circuits and OSs,
and I have no chance of ever owning one... I probably don't have the
time to own one, anyway.

The point is, there's a guide to getting started there, and hopefully a
link to other sites as well.

Hope it powers up and all that.

I agree! The SyQuest is faster and and holds more data. I use mine to
back up stuff on my Falcon and the BBS. Also, hooking it up between the
different systems is a breeze, its auto-recognized by ICD's Pro Utils.

I'm seriously contemplating getting a ZIP drive to go with my Falcon, and
just wondered how much I can expect to pay for one in the UK?

PC World have them for 149 quid, but this seems a little steep?
Does anyone know of anywhere else I can get one a little cheaper?

Also, how much should I expect to pay for a SCSI2 cable to go with it?

TIA, Gary

# 3943. Re: Help needed setting up "Thing" desktop

Newsgroup: comp.sys.atari.st
Date: 1997-02-25 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3312314e105d500@sn.no>
Source record: 127063

I've played around a bit with the "Thing" desktop and found out a few
things since I posted my last message:

-It seems that despite setting the "Ignore open window positions" in the
setup->windows menu, it won't save the setup with the windows open the next
time I start it up. I've got several replies from people mentioning that
this should work, but no matter what I try (ticking off other options as
well etc.) the desktop starts off with no windows open. It does however
"remember" the window positions, so that when I click on a drive icon the
windows cascade and are placed just as I've set it up before.

Having looked around in the help file (.HYP file) I found the following
comments in the "updating from an earlier version" section:

```
-------------------------------------
Unregistered copies of Thing now display 'Shareware' centre screen and
cannot save the positions of any open windows but is otherwise fully
functional.
-------------------------------------
```

I guess this answers my question.... sort of anyway- because *it does*
remember the window *positions*, it just doesn't let you have them open and
save them like that. I'd really like to know if anyone else has been able
to save the setup with any windows open, in the un-registered version.

The second thing I found out regards the icons. I wanted to add my own
icons to the "C:\thing\icons.rsc" file.
Several people mentioned that the reason I got problems with ORCS (Otto's
Resource Construction Set) was because the icons were in colour.
Well, I discovered that "Thing" had an alternative icon file called
"monoicns.rsc" (to be renamed to "icons.rsc" ofcourse).
I ran it through ORCS, added a new icon and imported a .ICN file to it,
then saved the whole file. It worked!!!!!! I was able to assign a new icon
to files/folders just as with the other icons in the "icons.rsc" file!
I did however mess up the order of the structure somehow as some previous
files had wrong icons.. all I did was to add the new icon last. Perhaps I'm
doing something wrong?
I found something about the "icons.rsc" file in the Thing help-file
("updating from an earlier version" section again):

```
---------------------------
Note: Thing (>=v1.0) now supports 'mini-icons'. These icons are
located in the second tree of the file ICONS.RSC which contains at
least the standard icons "FILE", "APPL" and "FOLDER". A selection
of mini-icons are included in ICONS.RSC and can be edited to suit your
requirements using a resource editor such as Interface or ORCS.
```

---

Doesn't really tell me much though. Does anyone know what those mini-icons
are for? How about the structure of the file?
It doesn't seem to be like the usual "deskicon.rsc" files for TOS 2.06, and
apparently "Icon juggler" won't work with Thing's icon file.
It sure would make things easier if it did, since I wouldn't need to save
the icons individually as .ICN files to be imported into "icons.rsc" later
with ORCS (or perhaps there's an easier way???).

Any comments regarding what I've written are welcomed..

# 3944. Looking for "DJ_on.CPX" (HP deskjet CPX module)

Newsgroup: comp.sys.atari.st
Date: 1997-02-25 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3312314e105dff1@sn.no>
Source record: 127064

I'm looking for a file package which contains a CPX module for the HP Deskjet 500 printer called "DJ_ON.CPX". I'm not sure what the package is called, and I couldn't find it anywhere, so could someone please lead me in the right direction?

Forsale
---

This system is cool since it is totally black with a grey keyboard
instead of being totaly grey.

Atari 1040STE
1mb RAM
1.44 FDD
External 720k FDD and PC 5.25 Drive
All cables included
Mouse
SCSI HDD adaptor (all you have to do is mount it in a case since it
is bare on a PC board)
blank 40mb SCSI HDD
TONS of software including GFA Basic.
SM124 monitor (the one I currently have is blown, so I am in the
process of getting a new one)

All this can be yours for $150 or B/O
I pay shipping within the US. I will sell over the boarder if YOU pay
shipping.

Thanks...

jfalcon@cybernex.net

Hi everyone!

I am using Atari 520 Ste 1Mb with Notoator. I by mistake deleted a file from within Notator. Is there anyway to recover this file? I had put a lot of work into this song, so I woud be most grateful for any advice?

Best Regards

Fredrik Jahn

## 3948. Atari ST as a music platform

Newsgroup: comp.sys.atari.st
Date: 1997-02-25 00:00:00 UTC
From: jlendino@panix.com
Message-ID: <5ett1s$85n@news1.panix.com>
Source record: 127068
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth

I'm looking for some information and resources on setting up a Mega 4STe for music. I know standard MIDI terminology and have been working with keyboards for some time now, but would like to get this particular machine rigged up to some keyboards.

1. What interfaces are available? I'm looking for at least 48 channels and a couple of MIDI ins.

2. What about software? Mainly I am interested in Cubase and Notator (Logic? is that the same thing).

Finally, does anyone have some equipment like this to sell? How much should I expect to pay?

Thanks in advance for any info.
Regards,
Jamie

l> basically everywhere I can think of, for Fastcopy, but have come up with
l> **nothing**. Arrrrggghhhh!!! I found Fastcopy 3 on Paderborn (sp). Could
l> not find any way to depack any disk images. Grrrr, guess I need a newer
l> version...

AFAIK, only Fastcopy Pro allowed streaming, but if your version has this go
to the streaming option and choose to write to partition. I'm sure that this
is an image function so i'd expect it to wipe everything else. Are you sure
its not an E-COPY file, that uses *.DIM images's.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

Quantity 104 Atari Magazines Available!!!!

$25 plus freight for all 104 magazines.....

Atari ST Informer (One of the longest active Atari magazines)
Issues #25, 32, 34 - 38, 40, 43, 45 - 48, 55 - 59, 62 - 68, 72, 74 - 76,
80 - 83. Total of 33 issues.

Current Notes (Another long time Atari magazine)
Volume 9 series #3, #6, & #7
Volume 10 series #7
Volume 11 series #5, & #9
Volume 15 series #1
Total 7 issues.

Atari User (Replaced Atari ST Journal)
May 91 thru Dec 91
Jan 92 thru July 92
Sept 92, Nov 92, & Oct 93
Total 18 issues.

STart (Nice glossy Atari magazine)
Special issues #1 & #2
Volume 1, #3 & #4
Volume 2, #1, #2, #3, & #5
Volume 4, #12
Volume 5, #1, #2, #3, & #6
Total 13 issues

Atari Advantage (Short lived but nice)
Volume 1, #1 & #5
Total 2 issues

Processor Direct (Nice glossy Tabloid, only one issue made it)
Premiere Issue (The one any only)

ST Log (Sprang from Analog magazine)
#12, 14, 15
Total 3 issues.

Atari ST Explorer (Atari's own magazine)
July/Aug 88, Nov/Dec 88, Jan/Feb 89, May/June 89, Nov/Dec 89, & Mar/Apr 91.
Total 6 issues

ST X-Press (Nice, I think from Canada???)
Volume 1, #10
Volume 2, #8

May 89
June/July 89, Oct/Nov 90
Total 5 issues

Compute!'s Atari ST
April 88
Total 1 issues

ST Format (Another awesome England magazine)
#22, 25
Total 2 issues

Atari ST User (Another hot England magazine)
#69
Total 1 issues

Total of 104 magazines available...

Hi fellow Atarians,

Mentioned a little while ago was a program which can save TOS
images from the ROM chip to disk.

Anyone know where I can get hold of this program?

Cheers,

Dave Woodley.

p.s. I need this program for LEGAL use, I'm not going to nick
other people's versions of TOS. I own a STE with TOS 1.62, and
an original ST with TOS (1.00) on disk. I want to try and get
1.62 to work on my oldie ST.

>don't keep backups :(. Now however I seem to have a more serious
>problem, when exiting from Nos, after a d/l session, a box appears, as
>normal saying 'Merging News Groups' the screen then bombs(3)

I've had this recently. There's seemingly something in the NG or
NEWGROUP file which it doesn't like.

As there are duplicate entries in both my files I passed them both
through a third party sort 'n' merge utility, overwrote NG with the
result and deleted NEWGROUP (as merge is supposed to do). Needless to
say the darn thing still crashes on merge!

I run Magic which means I have to execute Nos directly then implicitly
unbatch, thus I can void the automatic merge. Anyway ...

I then found if I tried to add a newsgroup the selector will only go
down so far through the groups. Thus I've come to the conclusion Oasis
has some hard coded limit on the size of the NG file.

I suggest you remove both files. If I'm right it will start working
again. You could then perhaps go through NG and chop out large
sections to reduce the filesize. Btw, I wouldn't be surpised to hear
it barfs if NG does not exist so you might have to cobble together a
few lines into a dummy NG to fool it.

>and
>colours look all smeary.

Wierd!

>I can rerun oasis, select internet and then
>news groups, which continues the sorting. I have a nasty feeling that
>Oasis is a ticking timebomb, just waiting to crash completely. I've
>tried Oasis 2.05 but that is naff, Icenet conf prog bombs, and you get
>loads of cheaksum errors. Has anyone any suggestions, what to do, if I
>need to completely reconfig prog, if so, where do I get an Oasis.tos
>from?

I had such immense trouble getting Oasis to work "just so" that I backed it up the moment I got it working (twice). I also expire both news and email regularly.

Check out hard disk space. I know for a fact that spool\articles\articles.txt needs at least as much free space as is its size to unbatch. There is no checking - it just barfs making a right mess of the "daily net". The only way round this is make enough space available and unbatch again after expiring every single article. The same probably applies to email.

If you've got version 133E then I can send you a little utility which marks all but the last 'n' emails for expire. It might work on other versions - it depends if the IDX file format is still the same. Try it at your own risk! <G>

> What type of ST are you using? What speed modem?
>
> Greg

I decided to give CAB a try again. I had good luck
with the earlier version, but with 1.5 (030) and
OVL1.21 almost all servers give me error #600.
My providers site works fine as does the Afterburner
support page. The STik page, Computer Direct and
Toad will always give the error #600. I have plenty
of cache (disk and memory) set aside. HSModem 6
for SCC drivers, and STik 1.12. Newsie ALWAYS works
fine. MGFTP works like it always did:). I might have
problems with the configuration file as I changed some
of the settings to what my provider recommended.
Most all of my Hotlist sites that use to work don't
now. I tried OVL 1.18 with no better luck.
Any ideas for this Falcon nut? This is all under TOS.

Mike

I use an MO-4 which is very good. SoundPool has still another unit, the MM-1,
which has 8 extra outputs - Imagine that: 144 midi channels!!!

Best regards,

Claes

I found that this feature just wouldn't work in Thing 1.09, maybe it's a
bug.

>Oh, so I *have to* assign some kind of viewer for it then?

Well yes, if there is nothing to show the file then you won't be able to
see it. It doesn't slow anything down.

>I was hoping to avoid it altogether to speed things up a bit. The desktop
>slows the machine down enough as it is (using the replacement desktop is a
>lot slower than using TOS) Hmmmmm..... makes me wonder- perhaps it would be
>possible to customize some EPROM chips and use this desktop instead of the
>old TOS desktop- I bet this would speed things up a bit!

I found Thing to be very fast, but if it is slower than the standard
desktop, well I can't see how putting it in EPROM would help. My
experience, though, is that Thing feels a lot faster than the standard
desktop.

>Oh, so it's colour icons...

>file with mono-only icons. I have loads of icons for TOS 2.06 which I'd
>like to use. I'm not really interested in buying "Interface" just for this
>purpose.

Alternatively you could get RCS 3 from ftp.cnam.fr. Then you don't have to
buy anything. Otherwise, just make a resource with mono icons. In fact, I
thought such a one was supplied with Thing by the name of monoicons.rsc. If
not, just create a resource with two forms, the first containing large

icons (usu. 32x32 pixel) and the second small icons (usu. 16x16 pixels).

Don't know anyhting about it myself but you posted this to the d.i.s.a
which is the internet support area for demon users with atari computers
:) I've copied this to c.s.a.s so hopefully someone will be able to
answer your question.

From: gary@the-gap.demon.co.uk
Message-ID: <82435440_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 126928

In article <5evhhn$b49@news.telebyte.com>
csilver@kendaco.telebyte.com.Spam.Th.is (Charles Silver) wrote:-

>Before you buy a ZIP drive you might consider a SyQuest EZ Drive(135meg cart)
>IMHO, the SyQuest is faster and uses a better technology. The price here
>in the US is the same as a ZIP drive, about $125. The cable to connect to a
>Falcon cost anywhere from $29 to $60 ;)

Hmm. I nearly bought one of these at the last UK Atari show, and was told
that the EZ135 was being discontinued! Is that true?

My latest trip to PC World showed no sign of EZ135's, but did show ZIP
drives, JAZ drives and something called a Ditto drive?

Any input would be much appreciated, as i don't want to buy a white
elephant!!

All very well, the EZ135 being better technology etc. but then so was the
Jaguar! Better, is not guaranteed to succeed in the computer industry :(
Marketing is the ALL IMPORTANT factor. I want to buy a drive that is cheap,
but also still going to be supported for some time yet!!
Time and again, it's been proven that it's marketing and not product
quality/technology that's important. I know this is a very cynical point of
view but it's true!!

Regards,

Gary

Source record: 126929
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth

: >Other options include:

: >Emagic/C-Lab Export (Not for Falcon) serial port - 3 MIDI Outs - $129
: >Steinberg MO-4 - Parallel Port - 4 MIDI Outs - $199

: Are these reliable? i.e. dropped notes, lockups, etc. It is
: promising that there are still many options available but it seems
: impossible to demo any of them without plunking down the cash first.

I have a C-Lab Export (which I can't currently use since I only have
Falcons at the moment) and it never behaved any differently than the
built-in MIDI port. Generally, the computer can send more MIDI
information than my instruments can handle (I have more than 15 MIDI
instruments).

PLEASE ;( Someone help me.

I need the original files that came with Cubase Audio Falcon. When I purchased mine (along with dongle, FDI, and FA-8) the original disks were not included and the software will not function properly. I would be very appreciative if one of you Cubase Audio users out there would contact me via e-mail.

Thanks!

From: please@no.spam.mail.here
Message-ID: <30109_please@no.spam.mail.here>
Source record: 126931

*Hi Gareth*, on 24 Feb 97 you wrote: ...respect, brethren

g>
g> I am an Amiga User, and have been for 4-5 years. However, a friend at
g> College (Or high school for you Americans.) owns an Atari 520 STe (1
g> Meg) and has been having some virus problems with it.
g>
g> Here is what he wrote:
g> "• Uncontrollable and randomly re-boots without consent.
g> • Swaps the mouse directions from left to right and vice-versa.
g> • Corrupts and destroys some files.
g> • Destroys anti-viral programs and perimeter blocks. (He did say the
g> checker was quite old. The V-Checker is unknown, it sounds a bit like
g> an Amiga program which installs itself onto the bootblocks though - I
g> think was called NUKE (The amiga one))

Many viruses can over-write bootsector virusguards. The signal that a virus
may've infected the disk is that the antivirus sign-on message fails to appea

g> • Destroys start-up on some games.
g> • Infected long-term computer memory. (I have no idea as to what this
g> is. If you don't know either, please mail me and I'll pass on your
g> question)

I think he means the virus reappears after he's had the machine switched of
for a while. This indicates that the virus is on the bootsector of the disk
that's in the machine when he starts up.

g> • Causes random system crashes.
g> • Plays around with the sound chip.
g> • Spreads like s***."

Pretty standard...

g> If you are aware of a program that can destroy this virus, please tell
g> me. If it is available from a company, please tell me how I can reach
g> it (Preferably a company in the UK).

To get rid of the viruses you could EMail Steve Delaney at Floppyshop on
sdelaney@steil.wintermute.co.uk - I think he's got one or two packages that
will deal with it. For something that stands a chance of reclaiming the
damaged game disks your only bet is to go for the Ultimate Virus Killer which
can restore bootsectors to nearly 800 games. It's available in the UK from:

Douglas Communications
PO Box 119

Stockport
Cheshire Tel: 01625 850270
SK2 6HW Fax: 01625 879541

Tell them how urgent it is because they have a reputation for being a
little.. err.. slow.

g> Also, if it is on the Internet, tell me how I can transfer the files
g> from my Amiga to his Atari.

Bit of a problem there. There's a util called cross-dos IIRC that's supposed
to be able to copy amiga disks onto IBM compatible disks. Your friend's ST
should be able to read a IBM disks without any trouble (double-sided only,
probably).

g> Thank you for your help

Hope it helps, Gareth...

: > definitely need the connectors to allow me to use a monitor and an
: > external SCSI device, namely my ICD AdSCSI+ adaptor.
:
: Well, you didn't see the SCSI connector as there is none, if it's not
: a Falcon MK-X which has an internal SCSI connector.

I came back from a user group meeting, and had one of our resident 'electronic specialists' take a look at it. This time I noticed more. It does have both the SCSI and IDE connectors. When he turned it on, the keyboard light came on fine. Seems I didn't see something on the underside of the case that prevented part of the light from coming on. We both agreed that the power supply was fine, after doing testing on the lines while it was on. The 12v lines seems a little low, around 11.5v or 11.2v, I believe, while the 5v lines are fine, though that shouldn't cause this problem. The floppy light doesn't come on, neither does the floppy run at all. The screen goes to white, and that's it.

Even our resident 'specialist' is a little stumped. He can usually repair a monitor at the meeting or somewhere else, but this one he said he hasn't heard of this problem. I'm open to ideas before I bring in the help of Toad for repairs.

: The standard falcon has only an external SCSI connector.

I know. The other Falcon owner in our group says mine has a LAN port, while his doesn't.

I've crossposted this to comp.sys.atari.st, for a more wider group, so if anyone doesn't wish to see it in both, can let us know to keep it in the comp.sys.atari.st.tech group. To those just now reading this, I came across this Falcon that has a problem or two, and you know the rest of the story. (jeez... am I becoming like Paul Harvey?)

A>> anything else but it doen't help ...
p>
p> Well when i use it in Papyrus, which aint often these days now, i set
p> Papyrus to print to a file, and point it to U:\DEV\FPRN when the F-
p> Selector opens.

Yep, done that!!

Using it with Papyrus and I do get a noticeable slowdown. It will print one
or two lines then pause .... without it it's pretty fast!

But Cab withut it is a real pita!!! It takes ages .... with the FPRN driver
it's a little quicker but I still get the above ..print/pause cycle ...

Hi Gary,

The EZ135 was replaced with a newer model EZ Flyer 230meg (~$272 US). It will
also read 135meg carts. SyQuest as a company isn't dropping their drives.
They have also released a 1.5gig SyJet portable for about $500 US.

The reason I and others I know who have SyQuest drives is that they are quite
and fast. Also, you can set the SCSI ID by a switch on the back so it's easy
to set up. Even AHDI can format the carts, a big plus for me :)

If you notice you don't see any posts about people having problems using a
SyQuest as you do with ZIP's.

P.S. I don't work for SyQuest :) More info @ http://www.syquest.com/

Charles

As there are no other versions than the german (if you don't want old
versions) and I do have the german, couldn't I get it from there as well?

Do you have the url to where I can get the update?

Couldn't they put up the english vesion as well. If I have understod it
correctly it's you who does the translation of the program and what is
causing all the dealys are the translation of the manual and you don't
need the manual for updates. A readme file would do.

BTW. What happened to the guy who said he would translate the developers
docs for MagiC to english? I have found the ST-Guide documentaion you
and some other guy has made. It's _much_ better than the manaul. Couldn't
someone, you, translate that as well? I treid to look for the new undocumented
appl_write calls, but I couldn't find them (for hiding/unhiding apps).

Yup. I guess ftp.cnam.fr has a rather big HD to start with. :-)

The thing is I have no adresses of publishers or which game they
have done and english isn't my native english so someone who can
write proper english in a way that doesn't piss people of is
needed.

I'm glad to help however I can, but I don't know how yet.
I don't have many old games, if any and as most doesn't work on
my box anyway so I'm not the right person to do it.

But as I have already said, I'm happy to help out with something if
it's needed.

Source record: 126947

Here is some info I have about ATW.

1988-03-16 (CE-bit)

Transputer:
T800 from Inmos, 20 MHz (32-bit RISC)

Memory: 4 Mb - 64 Mb

Graphics:
1 Mb video-RAM
1280x960 x 4-bit with palette 4096
1024x768 x 8-bit with palette 16.7 mill
640x480 x 8-bit with palette 16.7 mill
512x480 x 32-bit real color

Fill square: 128 Mpixels/s
Fill charc: 64 Mpixels/s
other op : 16 Mpixels/s

External memory:
40 Mb harddisk via DMA SCSI-port

In/out:
Atari mega ST keyboard
mouse
diskdrive
RS-232
Centronics
MIDI

LAN:
4-ports (ECL-buffert = RS-422)

Expansions:
3 internal expansions (such as X25, Ethernet)

Programs:
Helios operativesystem with X-windows
C with UNIX komp library
Fortran77

120 mips or 20 Mflop

Maximal 12-processor boards = 500 mips

Intel 80286/80287 8 MHz 300 KWhetstones/s
National 322332/32081 15 MHz 728 -"-

```
Motorola 68020/68881 16/-12 Mhz 755 -"-
Fairchild Clipper 33 Mhz 2200 -"-
Inmos T800 20 Mhz 4000 -"- ~ 6700 Drystones/s
```

I haven't tried it with MagiC, but Outburst blows away the NVDI
fastprint.
The software is still supported, (I would have to dig up the address in
the
U.S). The guy was very nice to deal with, helped with a couple of
questions,
and supplys updates for a nominal fee. Toad carried it, but they cannot
perform
the updates, and do not carry the current version. Best to buy direct
anyway.

Ok, you talked me into it. The company is called Straight Edge Software.

I have Logic 2.01 on my Falcon and I wouldn't call it sluggish. Also,
it works nicely with large resolutions (I have about 800x600 with
Videl Inside) and NVDI. If you have MagiC you can also run it fast
together with the SoundDiver universal synth editor.

I used to have KCS Omega II as my sequencer. I tried it on my Falcon
and it is _very_ fast with screen updates etc. But when you go to a
menu to select a function the playback interrupts. Logic plays pretty
seamlessly all the time whatever you do with it!

Logic can be a bit confusing at first but when you use it for a while
you notice how incredibly flexible it is. Cubase is supposedly easier
to use for beginners, but it lacks all the configuralibity of Logic.

>
>It appers that Logic has since been revamped extensively for the
>PC/Mac versions, whereas Cubase is largely intact but with new
>features.

Emagic has recently released a 2.5 upgrade for the Atari Logic it is
said to include some features from the Mac Logic 2.6 and since the
newest Mac/PC versions are 2.6.x I think that for MIDI-only work the
Atari Logic just about rivals the best versions for Mac/PC. Of course
the non-Atari versions have the audio features, which are missing from
the Atari version. (Except for the Logic Audio Falcon 2.01, which is
the last version - it is not very good for audio stuff...)

BTW, I paid around $200 for my Logic 2.01 second hand (I had to get it
from the US even if I live in Finland). Also, I have ordered the 2.5
upgrade which will cost me another $150.

I guess my distributor is System Solutions, but surely they don't
produce the patch. You guys do. Unless you supply them with the patch
files they won't be able to help me will they. And if you do supply them
with a patch, surely you could make it available via a web site, or ftp.

Would the german patches work with the english version?

Out of curiosity, does anyone know the url for ASH?

Regards, Gary

## 3990. Advice on replacing MegaSte motherboard

Newsgroup: comp.sys.atari.st
Date: 1997-02-26 00:00:00 UTC
From: Alyre Chiasson <chiassa@umoncton.ca>
Message-ID: <33143C02.4829@umoncton.ca>
Source record: 126952

I have had a number of problems with attaching peripherals to my MegaSte (SLM605 doesn't always work, Cartmaster only works with one device, second drive with the LinkII only works if the SLM605 isn't connected). The bottom line is that I've been told that a qualified technician would have to look at it and there are none available for miles not to mention delays and shipping. So I bought a new motherboard from Toad a while back when they were on sale and am planning to do replacement surgery.

I have some experience from replacing the floppy drive, the TOS chips and the hard drive in my MegaSte. Apart from protecting everything from static electricity are there and particular pitfalls I should watch for or is it just a question of releasing all screws that appear to fix the motherboard to the housing, pop it out and put the new one back in and transfer the hard drive components and floppy drive components? There are already TOS 2.6 chips and Sims on the new motherboard.

Thanks

Alyre Chiasson

Hehehe... no, I was just being vague... I'm waiting for a response to an
email before definate release of version 1.0 (which is complete).
Version 0.5 is definately going to be available on friday if V1.0 isn't.
(the only thing remaining to be done to either version is drawing an icon)

Yes, marketing is important. But Syquest has been around for a long time, so
has Iomega actually, but Syquests are the standard for service bureaus, which I deal
with, along with Mac users. :^)
For about the same money you get solid technology, faster access, less expensive storage
(SyJet is almost half the cost of the Jaz on a per MB basis)
The reason I believe Zip is so popular is because it was parallel port, and so IBM folks
could
use it. (Scuzzy, what do ya mean scuzzy, I ain't scuzzy!) Just 6 months ago I called
up about 30 service bureaus here, (a friend was considering an IBM for graphics work,
so I was looking to see if the Zip drive was in use professionally) and I only found
one(1) service bureau using Zip, they and _everyone_ else were using Syquest. No one
has a *lock* on the technology, but Syquest will probably be around for many more years.

> P.S. I don't work for SyQuest :) More info @ http://www.syquest.com/
> Charles

Jeez, you guys are paying too much!
EZ230 is about 280$Cdn[215U$A] and SyJets are 500$Cdn[390U$A]
lots of things are less expensive here though.

Hello,

Before my TT I had a megaste and I had opened it a lot of times to
replace the floppy, to put a coprocessor, to add pals, to change TOS
ics ... and even to place a 10 Mb ram expansion and also to replace
the cartridge fuses ...

Opening the Mega ste to extract the power supply is not so difficult,
you will have to unscrew only two screws from it.
Be also carefull with the power supply connector it is well attached
to the main board ... dont be too brutal.

When it's done, the only thing you have to do is to unscrew the
motherboard ... a lot of screws.

Now be very carefull ... when you attempt to extract the motherboard
from the case, you will have a problem ... with the reset button ...
unfortunately there is no good way to extract the board without
bending the reset button case a little ... this is the most difficult
part during your disassemble project ...

Everything else is easy, only put marks on each connectors like the
floppy connector, the power led connector and the internal scsi card
..

You definitely should follow other's directions and download the latest
version, 2.06. But I don't believe it comes with MROS, mixer maps,
etc. Let me know if you need copies of all the original disks.

>good luck.bonne chance
>

I understand and agree with this statment and this seems to confirm the suspicions/problems I am having: the IBM refuses to read the tos formated disk, instructing me to check for formating and or disk errors. This is the case no matter what type of file formate is used (standard midi or native sequencer formate), and no matter the # of sectors/track used on the Atari disk. IBM machines do not read tos formated disks.

The only other solution I can see is plugging the two machines together via midi, using external sync and re recording the sequence on the IBM one track at a time... anyone who can save me from this task is a true hero and shale earn amounts of respect usually reserved for the Holy.

Greetings to all,

Alas and alack, a PC beckoned and I succumbed.

So now I have a TT for sale:

4Mb ST RAM
20Mb TT RAM
Crazy Dots 2 Video card (great 1024x768x256)
Dell Ultrascan 14" monitor
512MB SCSI HDD
Software coming out of it's ears (Most of the best utilities
and applications)

I would prefer to sell it as a complete setup, I think it is a very
good setup and it has served me very well. All kit is like new and has
been well looked after.

What is it worth?

hi, hmm obviously you didn't read the doc well enough.
Mint is not click and run.
With this installation, 95% of the person who tried it(regular people,
not wiz) did it. It is very easy.
Just have to answer few question, and wait for few min for the
installation. Isn't that easy?
Everything is in English, even easier.
The hardest part(which is still very easy if you can read/type) is to
finnish the installation.
bye :)

## 4019. Problem with 520STfm

Newsgroup: comp.sys.atari.st
Date: 1997-02-27 00:00:00 UTC
From: kparks1@osf1.gmu.edu
Message-ID: <5f3134$6b5@portal.gmu.edu>
Source record: 126781

Just purchased this machine and having problems. Machine won't boot. The manual mentions a language
disk for booting but I thought ST's has TOS in ROM....? Anyway, when I turn the machine on, the floppy
disk seeks (I don't have any disks for this machine) and the screen is black with a white border.

Is this normal behavior or do I have a broken machine on my hands?

I should also note that I don't have a mouse either. This couldn't be the cause of my problem could
it? Where can I get a mouse?

TIA,
-KP

jperez@Hawaii.Edu (John Perez) said:-

>Currently, most of the DSP effects will not function, and I am under the
>impression that I am missing something important here. I just recently
>ran across the driver for the FDI, which I also didn't know about
>previously.

Check Hardware Set-up for the right FX i.e.: 16trk, EQ end so on.
You have to have the right one...
Secnd check object Out in appropriate MIXMAP by double clicking on it,
very often it's wrong (should be DSP).
You can change Outs for the whole map by holding down ALT key while
selecting.

Cheers,

There is one on Steinberg's US site in some folder..
I think it's called MROS_3.43 or something.
Dev. drivers and MROS itself.

Regs,

Got mine from Sys Solutions....got a bum copy...finally works with a new copy
of 2.4A

It's nice to see the author is still supporting the product....(He replied to
my email for help within 2 days)

I've downloaded Thing v1.00 and v1.09 but neither is in English. I take it you're all either living with German menus or you're using v0.59? I'd like to try Thing to see how it stacks up against Ease. I like the look of NoDesk but I don't like their RS232 intercept - it screws up comms programs to have the "WAHL" window open when I'm trying to log onto Genie through either Connect or StarCall. Otherwise, NoDesk looks terrific, although the lack of support for it anymore may send me towards Thing instead.

Dunno where you can find it, but I have it here if you want it.
I can mail it to you as it's a pretty small file (2 Kbytes or something)
It's called "Romdump.prg".

>p.s. I need this program for LEGAL use, I'm not going to nick

Good! there are enough people out there who want to get it for free, and
it's action like that which kills the platform.

Thing 1.09 DOES exist in English, at least for those who have a
subscription with disk for Atari Computing, which is BTW an excellent
magazine.
I've use Nodesk, Gemini, Tera, Neodesk and Ease for a while, and right
you're if you're saying that Nodesk looks terrific. I love the look of
it. But IMHO Thing is the best choice as it's still under developement
which can't be said of Tera and Nodesk and maybe Gemini.
Neodesk is a good desktop too but it has some troubles if you use it
with MiNT.

You lucky basterd :)

>adapter of some sort and a daughter board (called a Farm Card, I
>think) with 4 transputers on it.
>I gather that the ST is really just a front end for programming the
>transputer bit.

The farmcard is more of a motherboard; There is one transputer who is coordinating the stuff, (I don't remember if it was on the farmcard as well), and the other transputers help him. The more transputers, the faster. The ST is indeed more of a front end, or as Atari calls it; an I/O-board.

>I am posting here to request if anyone has any info on the ATW

I found a large textfile on a local BBS long ago. I haven't got it anymore, but I'll try to find it again. It had very useful information, but as it was written at the start of the atw-project, there is not much info on the software that came out. There is probably not much software, but if you do find something, you'll see the ATW (especially if you have 4 transputers!) is an extremely powerful machine!

Hello,

Good news for everyone who need to build his home pages without any knowledge of HTML language ... Matthias Jaap has made the program you need and now it exist with english, german and even french.rsc (made by your present friend Jo).

If you want to try this nice piece of software, then go to :
http://www.hh.schule.de/hhs/mjaap/program.htm
Though this page is in german, you will easily find the link to download the program in ZIP format.

You won't be deceived by the soft which is now optimized for Geneva 3D dialogs ...

Don't forget to pay to the author.

: I have Logic 2.01 on my Falcon and I wouldn't call it sluggish. Also,
: it works nicely with large resolutions (I have about 800x600 with
: Videl Inside) and NVDI. If you have MagiC you can also run it fast
: together with the SoundDiver universal synth editor.

Im speaking in comparison to Notator. With Notator on an Atari ST, I could save, load, format a disk, etc... without interrupting MIDI playback. Logic hiccups and pauses during file operations. In addition, transport operations in Notator were clean and seamless. At least half of the time that I stop a song to reset the pointer to the beginning of the song, I get the message "MIDI interface would not respond" or something along those lines - then I have to click to clear the message.

Screen redraws are also required frequently on Logic, and take a fair amount of time.

: menu to select a function the playback interrupts. Logic plays pretty
: seamlessly all the time whatever you do with it!

I wish that mine was...

: Logic can be a bit confusing at first but when you use it for a while
: you notice how incredibly flexible it is. Cubase is supposedly easier
: to use for beginners, but it lacks all the configuralibity of Logic.

I agree that Logic appears to be an inherently more configurable and powerful program. It allows you to set it up for your specific system, and the way that you want to write music.

Hello,

CAB 2.0 seems to be ready ... but ...
CAB 2.0 will not be shareware anymore, what I have read on the net is
the proof ... it will be distributed by Applications Systems
Heidelberg let's have a look at :
http://www5.tripnet.se/~mille/english/cab.html

Also I have tried to go to the ASH web pages, but CAB refuses to show
this page because there is no title !!!!! a pity !!!!!
Then, try it if you don't use CAB :
http://members.aol.com/ashinfo/index.html

That's all for today ...
It's enough ... I think ...

...
>problem. The floppy light doesn't come on, neither does the floppy run at
>all. The screen goes to white, and that's it.

If you get a white screen, things are at least partly working or the video
circuitry would never get properly setup.

(One way to get a white screen is to remove your afterburner card, try to
get everything else back in order, but be unable to solder two surface
mounted '030 pins back. I have personal experience with this...)

The white screen means that the processor is running, the lack of a logo
means that the blitter hasn't put it there for some reason.
In my case that was most likely caused by the bus arbitration lines being
disconnected causing the blitter to never receive the bus, while the '030
kept waiting for it to finish...

So, one guess is that the blitter might be dead. I'd hope not, though,
since that would require the replacing of a surface mounted chip.
I'll take a quick look at the startup code to see if there's anything
else obvious that's happening there.

>I know. The other Falcon owner in our group says mine has a LAN port,

Are there Falcon's without LAN port?
(Not that it's very useful.)

Message-ID: <30281_please@no.spam.mail.here.mettav>
Source record: 126839

This message from postmaster@bassment.demon.nl to All came in on a wing and a prayer...

Hi Maurits!

p> I'm having trouble getting an SLM804 laser printer to work. Naturally
p> I switch it on before the computer, have connected all cables correctly
p> and there's no device conflict.

I can't give you specific advice, but have you had this printer working before

You don't say which host adaptor you're using, if it's one with a DMA through port then you could try swapping the order of the devices round, ie DMA-Host-SLM controller or DMA-SLM controller-Host.

You could also try ICD's IDCheck prog, that should tell you whether the controller is being recognised or not (set to device 7 as a default). You do NOT need to enable this ID in the disk driver s/w BTW, as it isn't a bootable device.

p> Is there a definite way to see if the controller is busted? Shouldn't
p> the TEST.PRG be able to print without any other driver-software

IIRC the test.prg requires the Diablo emulator to be present, the other progs that you mention have their own drivers and don't require the Diablo emulator.

p> installed, in other words, is this a hardware problem? Any help is
p> greatly appreciated!

If you've tried all the above, then I'd check the cable between the controller and the printer for open circuit wires (the handbook has the pinouts BTW).

HTH.

Hi Harry!

h>>> Andreas is here to answer some issues, and obviously he understands
h>>> a lot of issues surrounding Magic, but it's clear that he's not
h>>> responsible Magic itself - just MagxDesk.

[cut]
HS> 6. Magic crashes if the floppy drive contains a disk containing the
HS> FCopy Pro antivirus bootsector. Why?
Ditto with the boot sector that I use(d) to poll the SCSI bus until the drive
responds and boots - the MagiC booter runs and the system hangs after this
bootsector runs again and boots the remainder of the autofolder.

Speak to 'ya later!

Ofcourse it's good! (I always make good things.) It's a platform game. It's something like Tony Greenwoods Heartland, only a bit better.

It seems that the SyQuest EZ135s have disappeared from the UK market,
I now wish that I'd bought one for 90 UKP, which was their recently
discounted price - no wonder they sold out :-(

They now have the EZ Flyer 230, but the drive is twice the RRP of the
135, and the disks (almost twice the capacity of the 130) are more
expensive, too.

However, I'd have to agree that the SyQuest drives seem to be better
than the Iomega ones. The Zip drive has a *very* slow transfer rate
and isn't too robust, according to some people.

Regarding the Zip, buy any PC/computer mag and you'll find them for
about 100 UKP excluding VAT. As for SCSI cables, the cheapest I've
seen is about 30 UKP, from the ever reliable Maplin catalogue.

Hmmm... I just unarchived Thing v0.59 off cnam but it's in German too!
Ok, so give with the URL for English versions already!!!

>with CAB on www.dejanews.com?

Yes but only under certain circumstances - iirc trying to locate
articles posted by a particular person might be one of them. Most
apparent failures are not though (and this happens on some other sites
as well (Yahoo?)). Anyway stuff gets received after you submit
something but the page stays the same. If you click on some other link
then go back the details appear. Going back again does not put you
back where you started but at the page before. 'Tis odd!

From what I understand the only way to remove the copy protection is to
'crack' the program. This is why a lot of the 8 bit software is
usuable. If the authors are willing to let their software be
distributed for free, I don't see the problem with distributing it
without the copy protection. Don't quote me on that one. :]

LAst time I checked, Toad had one using SIMMs that was going for about $50
brand new - with the cost of RAM now in the cellar, you could easily get
your 520 or 1040 up to 4 megs for well under $100 using all new parts.

(posted and mailed) If it's working right, you can stick any formatted disk
in the drive and the desktop should come up in a few seconds. However, if
it's a single-sided drive, you want a 360k floppy, and if it's double-sided,
you want 720k. The PC standard 1.44mb won't do you a bit of good.

If it's not working, then you'll never get past the blank screen. It would
probably be cheaper to try the "drop fix" than to buy hardware manuals -
just lift one end of the 'puter about 6 inches (10 cm) off the desk and drop
it (with the power OFF, of course!), then repeat for the other end. The
socket chips suffer from "thermal creep" and try to climb out fo their
sockets in early model STs - the drop fix reseats them about 99 percent of
the time.

>Please email to hutchinj@orlando.veda.com

Good heavens, John, go to Radio Shack and get a standard video dubbing cable (RCA plug at both ends of a 75-ohm coax cable). Plug one end into the ST and the other into the antenna connector on your TV - you may need an adapter to do that last part, so it's a female RCA jack to male RG-59 (I think is the right designation) adapter.

Or get a standard coax antenna cable (up to about 50 feet long) and a female RG-59 to male RCA adapter for the ST end - same concept, just longer.

Daron, I don't know if the postal regulations are the same over there as over here - but a couple of years back, the FBI seized the hardware at Steve Jackson Games, and Steve was able to not only force them to give them back, but the Feds had to pay damages because there was undelivered email on the hard drives, and interfering with private email delivery is illegal here. You got any NeST email/netmail on that system? <G>

Can't help with the file structure, but the "mini icons" are just that -
when a file type is assigned to an icon and you have the desktop set to
display mini-icons in open windows, you see the small version of the icon
next to the file name. It REALLY looks good in 16 colors or more, and
allows very fast visual identification of file types if (like me) you have
folders full of unsorted "stuff."

Thing is fantastic - all the good parts of Win95, and none of the cr*p. I
plan to register it as soon as I can sell this 2 gig EIDE drive.

(posted and mailed)

I believe Midi Music Maker will convert - I know it will play, at the very
least.

Look for MMM at one fo the search engines.

# 4067. Re: Cubase Audio Disks

Newsgroup: comp.sys.atari.st
Date: 1997-02-27 00:00:00 UTC
From: maurits@bassment.demon.nl
Message-ID: <857081348_OASIS_@bassment.demon.nl>
Source record: 126865

Hi :)

>Surely someone out there has Cubase Audio Falcon on diskette? Even a
>directory listing from each diskette would be very helpful, as I may have
>all of the files, but they are probably not in the correct
>places/directories.

Here's the structure for a start:

Disk 1:

CUBASE.DAT <DIR>
Contains all *.FNT and *.SYS files

DOC <DIR>
Contains all textfiles

MIXERMAP <DIR>
Contains all *.MIX files (can be downloaded from Steinberg on the web)

MODULES <DIR>
Contains all *.MOD files (no, not music mods) :)

MROS <DIR>
Contains MROS (downloadable from Steinberg) and all *.DR(V) files

CAF_206.PRG
DEF .ALL

Disk 2:

DRUMSETS <DIR>
Contains *.DRM-files, ordered in different folders for Yamaha, Roland
etc.

FONTS.LS <DIR>
Contains all ??????LS.FNT files

FONTS.SP <DIR>
Contains all ??????.FNT and ??????SP.FNT files

GERAMONT <DIR>
Contains all GARA????.FNT files (no, not a typing error, the dir is
called gEramont and the files gAra..)

IPS <DIR>
Contains all *.COM-files

PRINTERS <DIR>
Contains all *.PRN-files sorted in folders for different printer brands.

SCORES <DIR>
Contains:
4SHUFFEL.GRV
8SHUFFEL.GRV
GEN_MIDI.SET
TUTOR_2.ARR

KEYSLOT.AC(C)
SPOOLER.AC(C)

Well, that's it. If you want to receive the disks completely, get back to me on email (maurits@bassment.demon.nl) and I'll mail them to you (if your mailserver can take it) ;^)

Good luck,

Maurits.

You're doing better than I am - I use FastSerial, but even after I isntalled
HSmodem (again - version 7 I think) I can't get it to dial out using the TT
Modem2 port. Sometimes it will do it if I enter the dial commands manually,
but never from the dialer dialog. Too bad, I'd register it in a heartbeat
if it worked properly, it looks absolutely smashing in 16 color TT medium
rez.

Yes. Whichever program is the first one there, set the fastload bit to OFF
and it will then clear all RAM upon loading. Wastes a second or so, but
that's the price you pay for clean RAM.

>... the IBM refuses to read the tos formated disk, instructing me to check for formating and or disk errors. This is the case no matter what type of file formate is used (standard midi or native sequencer formate), and no matter the # of sectors/track used on the Atari disk. IBM machines do not read tos formated disks.

Assuming the disk is formatted to either 360k (single-sided double-density) or 720k (DSDD) by the GEM dekstop, all you need to do is "fix" the boot sector. You can use ST2PC or Norton Untilities (ther are some others but I can't recall the names ATM) to write a new boot sector that DumbDOS can then read, at which point it will suddenly realize that the disk really IS formatted and contains valid data.

DO NOT EVER do this with a copy-protected or self-booting ST program disk, however - it will never work right on the ST again. Period, full stop.

EK>Does anyone know where to get the CAB modul "GEMjing" for playing
EK>soundsampels, midi files etc.

It is not available yet because it is still beta. Midi file playing is not implemented (and never will). GEMJing is playing:

- WAV (Windows WAVE samples)
- DVS (Winrec samples, unpacked)
- au (Sun/NeXT samples)

on all ST, STE, TT, Falcon and MagiCMac. When released you can get it from ftp.maus.de (pub/incoming), several Maus mailboxes in Germany, my home page and every CAB and Texel release.

Having seen how Teradesk handles it (with a built-in GEM text browser, very nice), I thought perhaps using 1ST Guide as the "default" viewer (e.g., display *.* using drag & drop) would be nice. Problem, though. When I double-click a program file, I expect it to run, not to be displayed in 1ST Guide. So much for that idea...

Well, I hope it works when the program is registered. And for DM 25,-
(approx 13 UK pounds?) I think it's worth it.
Anyone registered it and seen if it really does save the desktop with the
windows open?

>>Oh, so I *have to* assign some kind of viewer for it then?
>
>Well yes, if there is nothing to show the file then you won't be able to

Done it! I assigned "ST-guide.ACC" to do it. Works really fast as I have it
in memory already to be able to use all those nice .HYP guides.

>>I was hoping to avoid it altogether to speed things up a bit. The desktop

You're right!!! What I did was that I set the "unload Thing from memory"
when an application was started, so every time I returned to Thing it had
to be reloaded. No wonder I thought it was slow!
But it seems like opening a window/folder with many files is slower than
TOS. Perhaps there's something I've done to slow this down as well! Anyone?

>>Oh, so it's colour icons...

Downloaded it! And yes- you're right about the mono icons. I'm using them
now.
I got ORCS to do the job, but after having a look at RCS-3 I'll probably
end up using that program to do the rough work, especially since I didn't
find any "copy icon" in ORCS. (It's really unnecessary work to resize a
blank icon each time when this can simply be copied). Is there a "copy"
function in ORCS that I might have overlooked?

But I do however like the "edit icon" part of ORCS a whole lot better than
the one in RCS-3. Perhaps I'll have to go for Interface some time to get
the best of everything.

Well, I already have the ACCessory for it, and I think I have the
executable as well (it came on a disk with a whole lot of Deskjet
utilities), but I'm specifically looking for the CPX module as it doesn't
take up an extra ACCessory slot... and I do like those cute little CPX
modules as whole lot better too.

So, can anyone help me find this CPX module which "resets" the HP Deskjet-500
printer?

# 4076. AUTO program to clear memory? (warm boot=bombs)

Newsgroup: comp.sys.atari.st
Date: 1997-02-27 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3314e97038edd62@sn.no>
Source record: 126884

Is there some kind of program which can be put in the AUTO folder which clears everything in memory?

I seem to have a problem with bombs when I reboot the machine sometimes- when doing a cold-reboot <CTRL-ALT-RIGHTSHIFT-DEL> all's well, but if I do a normal warm-reboot <CTRL-ALT-DEL> I often get bombs in the boot-phase, and messages that certain programs are already installed (such as "TOS2GEM"). "HSmodem" also seems to be pretty picky at times about this.

So.... is there some kind of program I could put in my AUTO folder (naturally making it the first program to run) which properly clears all memory in the machine, so the computer starts off "fresh" each time?

I though a reset would clear all memory anyway, but obviously not.
Has anyone else experienced the same problem?

Max Farina (massimo@irfmn.mnegri.it) wrote:
: > I need the original files that came with Cubase Audio Falcon. When I

: Try FTP.STEINBERG-US.COM in \dist\product_updates\atari\cubase_audio\

I'm sorry to be such a big pain :| but I downloaded every update and other related Cubase Audio Falcon file that I could find, and there are still files that appear on the non-factory disks that were not included in those updates.

Currently, most of the DSP effects will not function, and I am under the impression that I am missing something important here. I just recently ran across the driver for the FDI, which I also didn't know about previously.

Surely someone out there has Cubase Audio Falcon on diskette? Even a directory listing from each diskette would be very helpful, as I may have all of the files, but they are probably not in the correct places/directories.

Thanks again ;)

OK, listen up. If you want to do some kind of campaign like this, I'll lend support. I'd rather see old games out in the open for all to play with rather than starting more piracy arguments.

If anything can come of this idea, I can provide ftpspace on a fast UK server with no access restictions.

I'd need to be 110% SURE that you had written permission from the author to distribute the game, though, before I'd add it to the site.

Ken Macdonald <macdonald@cfcsc.dnd.ca> wrote:

> P.S. you could muck around with DCFormat, I think it had a way to format
> MFS or/and HFS disks.

It did, but only for use with Spectre 128, before the GCR version arrived. FWIW, I did try formatting a disk, copying some files under my old Spectre 128 setup, and putting the resultant disk in the Mac.

First thought was that it had worked - the disk is readable, and icons do appear. Sadly, the real Mac then proceeds to choke to death at any attempt to read a file from this disk. It would seem that the Spectre128 HFS and MacOS HFS formats are different - probably as the real Mac uses Group Code Recording (GCR), whereas the disks produced by DCFormat don't, since they can't vary the drive spin speed. :/

ATB, Frank.

# 4085. Re: Spreadsheet required

Newsgroup: comp.sys.atari.st
Date: 1997-02-27 00:00:00 UTC
From: please@no.spam.mail.here
Message-ID: <30182_please@no.spam.mail.here>
Source record: 126893

*Hi Keith*, on 25 Feb 97 you wrote: ...respect, brethren

n>
n> Harry..... it appears LDW will do just as good a job at Lotus
n> conversions as Texel could do...

I heard LDW 2 was actually a very good program.

n> last I read here from Mr. Much was that it only handled WK1/WKS files.
n> That's *OLD* Lotus files! I wanted Texel to be able to print my
n> GDOS/Speedo/NVDI printer (in my case, an SLM605) and I suppose I can
n> handle Texel if that's all it does

At the Atari Show price it was actually a very good deal for a modern GEM interface and support for Speedo fonts et al. I've been impressed since I saw the very first demo and the example printouts.

n> but jeez I was hopin' n prayin' there would be some decent
n> import/export facilities for Lotus/Excel.

I know one guy whose decision to stick with Atari machines rests entirely with Texel and its ability to import/export Excel compatible files. The look and feel is only part of the story - I'd hoped that file compatibility would be one of the easier features, but it seems I'm very mistaken... B^{<

n> It appears not at this stage!

At least its still on the to-do list.

Regards,
Sid Celery

# 4086. 16 Meg Falcon FS

Newsgroup: comp.sys.atari.st
Date: 1997-02-27 00:00:00 UTC
From: michaelk@pacifier.com
Message-ID: <5f36sp$1ik$1@news.pacifier.com>
Source record: 126894

Atari Falcon 030 TOS 4.04
16 Megs Ram (factory upgrade)
84 meg IDE Hard Drive
Bass boost & Input gain "fixes" to audio jacks
Mouse Included
Compo Digital Audio Interface : allows high quality digital recording
via DSP Port with included software -- record direct from cd or use your DAT
Deck
Midi Cables

Software:

(manuals included)
Dr. T's KCS OMEGA
MusicoM: Compo's Hard Disc recording software -- can record to IDE Drive
Photo Show Pro 2.31
Image Copy 4.0
Stalker
Falcon System Discs
True Paint
Diamond Back III
Pagestream

& more...

Best Offer over $500

Buyer pays all shipping costs

BTW: I live in Vancouver, Washington NOT Canada

# 4087. WTB: 1040STe Memory Upgrade

Newsgroup: comp.sys.atari.st
Date: 1997-02-27 00:00:00 UTC
From: lr172@aol.com
Message-ID: <19970227063201.BAA23951@ladder02.news.aol.com>
Source record: 126895

I'd like to upgrade my STe from 1meg. to 4megs. & I have no clue as what
to do
since I'm totally unfamiliar with this machine. (I just purchased it)
Somebody
please help. I need to know where to get SIMMS and all that.

Thank you much!

Please E-mail LR172@aol.com

# 4088. FAQ: Frequently Asked Questions about Linux/m68k

Newsgroup: comp.sys.atari.st

Linux/m68k Frequently Asked Questions
Chris Lawrence, quango@ix.netcom.com
Version 2.0.12, 26 February 1997

This is the Frequently Asked Questions file for the port of the Linux
operating system to Motorola 680x0-based systems. This is version
2.0.12 of this FAQ, which corresponds with Linux/m68k versions 2.0.28
(stable) and 2.1.26 (developmental).
------------------------------------------------------------------------

1. Introduction

1.1. Newsflash

What's new since FAQ 2.0.11 (February 13):

o Linux/m68k 2.1.26 released.

o Fixes for X11 on 2.0.28 released.

o Maintainer has new email address: quango@ix.netcom.com

What's new since FAQ 2.0.10 (February 8):

o Scouted out some more (hopefully relevant) newsgroups for this FAQ
to be posted to.

o Removed Infomagic information pending a discussion with them.
Their December 1996 LDR claims that a CD set retailing for
approximately $10.00 US will include non-Intel content, but I have
not been able to verify this with a human.

o Added David Cure's FTP site in France.

o Console palette setting patches from Geert.

o Cybervision 64 3D is incompatible with Linux/m68k CV64 driver.

What's new since FAQ 2.0.9 (February 7):
```

o Added links to non-HTML versions of the FAQ.

o New amiboot and mainstream kernel versions.

What's new since FAQ 2.0.8 (February 6):

o Added the Magazines and Books sections

o XFree68 3.2A (beta) is now available, including Broadway (X11R6.3).

What's new since FAQ 2.0.7 (February 3):

o The Linux/m68k bootstraps have been modified to support compressed kernel images.

o A SVGA framebuffer device is being worked on.

o GGI is the current hot topic on linux-m68k@phil.uni-sb.de.

o Jes is moving to CERN (the European Laboratory for Particle Physics) near Geneva, Switzerland.

1.2. What is this document?

This is an updated version of the Linux/m68k Frequently Asked Questions file (or FAQ). Since it probably contains errors (typographical and logical), outdated and missing information, and other significant problems, I ask that you send feedback and corrections to me.

This document is not intended to describe what Linux or Unix is or how to administrate it. To find out more about that read the standard Linux books and manuals. I particularly recommend Matt Welsh's "Linux Installation and Getting Started" published by the LDP and available in print from SSC <http://www.ssc.com/> (or its commercial counterpart, "Running Linux, Second Edition" available from O'Reilly and Associates <http://www.ora.com/>).

For questions about Linux in general, I recommend that you read the Linux INFO-SHEET. This document, along with many others about Linux, is available at the Linux Documentation Project's home page <http://sunsite.unc.edu/LDP/>.

1.3. Who Are You? What Do You Want?

This FAQ was originally maintained by Joerg Mayer <jmayer@informatik.uni-kl.de>. It is now maintained by Chris Lawrence <quango@ix.netcom.com>.

If you have a link to a previous version (1.x) of the FAQ, please change it to the new location as listed below.

1.4. Where to get the latest version of this FAQ

This FAQ is posted every two weeks to the Usenet newsgroups comp.os.linux.m68k, comp.os.linux.answers, comp.unix.amiga, maus.os.linux68k, comp.arch.bus.vmebus, comp.sys.amiga.misc

comp.sys.atari.st, and comp.sys.m68k.

The latest revision is available in HTML format, suitable for reading with a World Wide Web browser (such as Netscape, Lynx, Arena, etc.), at <http://www.clark.net/pub/lawrencc/linux/faq/>. It is also available in plain text format at all major Linux/m68k FTP sites.

Linuxdoc-SGML source for this FAQ, as well as PostScript, DVI and LaTeX conversions, are available at <ftp://ftp.clark.net/pub/lawrencc/linux/faq/>.

### 1.5. FAQ Numbering System

From now on, the first two parts of the version number of this FAQ will follow the mainstream kernel version number (i.e. when 2.2 is released, the next FAQ will be version 2.2.0). This has the side effect of skipping the developmental kernel versions numbered 2.1.x, 2.3.x, etc. The third portion of the version number is incremented (almost) every time this FAQ is revised.

### 1.6. Linux/m68k Versions Covered

This FAQ documents the 2.0 series of kernels. If you are currently using a 0.x or 1.2 series kernel, I recommend that you read the Linux/m68k 2.0 announcement <http://www.clark.net/pub/lawrencc/linux/announce-2.html> (and all the documents it says to read) and then upgrade to a 2.0 kernel. The 0.x and 1.2 series of kernels are pretty much obsolete.

Most things said about 2.0 kernels apply also to the 2.1 development series, unless otherwise noted. I strongly recommend against trying to use the 2.1 kernels until you are accustomed to using Linux. On the other hand if you like kernel hacking, join the 2.1 party.

The latest versions of the kernel and boot loaders:

o Linux/i386 kernel:

o Old stable: 1.0.9 and 1.2.13

o Current stable: 2.0.29

o Experimental: 2.1.26

o "Official" Linux/m68k kernel:

o Old stable: 0.9.13 and 1.2.13pl10

o Current stable: 2.0.28

o Experimental: 2.1.26

o Amiboot (AmigaOS bootstrap): 5.4

o Ataboot (Atari bootstrap): 2.2

o Amiga LILO (low-level bootstrap): 2.2

2. A Brief History of Linux and Linux/m68k

More details on the history of Linux can be found the book "Inside Linux" by Randolph Bentson <bentson@grieg.seaslug.org> (ISBN 0-916151-89-1).

2.1. MonoCPUism: Linus creates Linux

Linux is a freely available operating system for PCs: to be more precise, it is one of many flavors of Unix. Linux is being developed on the Internet by several thousand people, first and foremost by Linus Torvalds <torvalds@cs.helsinki.fi>, who created Linux for the 80386 in 1991. Linux is being tested and used by many more (the total is thought to be in the hundreds of thousands, perhaps millions).

2.2. The Linux/m68k Trinity: Hamish, Roman and Jes

The fun and success of Linux on Intel inspired Hamish Macdonald <hamish@border.ocunix.on.ca> and Greg Harp to port it to another platform: the Amiga. The first version released to the general public was 005. While 008 was current, a few enthusiasts ported that version to the Atari and the two versions have been successfully merged with 0.9pl3 (this reads version 0.9 patchlevel 3).

After releasing 1.2.13pl3, Hamish handed the coordination over to Roman Hodek <rnhodek@informatik.uni-erlangen.de>. Starting with Hamish's unfinished 1.3.20 port, Jes Degn Soerensen <Jes.Sorensen@cern.ch> started to work on integrating the m68k stuff into 1.3. With 1.3.94 the majority of the m68k stuff was put into the official kernel tree.

The present 2.0 series releases are of "production quality" and are suitable for general use on the Amiga, Atari and supported Motorola VME (162, 166 and 167) platforms. The versions of the 2.1 series are generally as stable as their counterparts on Intel platforms (probably even more stable, as there is more testing between releases).

2.3. In Their Own Words

Here's the story about the beginning in Hamish's words:

I decided to port Linux to my Amiga for a variety of rea-
sons. I have always had an interest in operating systems
(my work is in embedded systems for telecommunications).
After finishing my Master's thesis, I needed some project to
keep me busy, and justify keeping my Amiga. Linux was just
getting popular at the time, and I thought it would be fun
to port it to my Amiga. So I did. Greg Harp and a few oth-
ers had been talking for a while about porting Linux to the
Amiga. They'd only got a little way into it when I got
involved, bringing the work I'd already done myself....

And here about the port to the Atari in Roman's words:

I'm an old Atari user, but in some dark age of Atari, I also bought a PC... running only Linux, of course! Some time later, I noticed that there was a Linux for m68k (was a version about 0.06 or so), but learned that it was for Amiga only. Already at that time, I thought that it can't be that hard to port this to the Atari, but after some browsing in the sources, I gave up. I just didn't find a point where to start. But at least I subscribed to the MausNet newsgroup "LINUX68K". Several months later, in April '94, Bjoern Brauel posted an article there, that he has adapted Linux's head.S so it ran on his Falcon (until the first console output :-). I again was interested and asked Bjoern for the sources. In the next time, we two built some very basic driver, so we could at least see some output on the screen, and the kernel booted until the "unable to mount root". There was no HD driver yet... So I started to write a SCSI driver, and Bjoern went to IDE.

At that time, we heard that there was another group working on an Atari port. The most important members of this group were Robert de Vries and Andreas Schwab. They've never announced that they're working or how far they are, so we didn't know about them. And we communicated over the MausNet, not the Internet, so they didn't notice us... So we finally had two versions of an Atari port at the same time. Fortunately, we've mostly worked on different parts, so the merged version 0.01pl3 made a big jump in respect to what drivers were available.

The next story is about Martin Schaller: He also ported Linux to the Atari, starting directly from PC Linux, not from the Amiga version. (He didn't have a modem at that time, so no Internet, not even MausNet...) For that he worked totally on his own, he came very far and did a great job. In fall 1994, a German Atari magazine published an article about Linux/m68k. By this Martin heard that there were some more Atari Linux hackers and joined us.

## 3. Requirements to run Linux/m68k

### 3.1. Processor

You need a Motorola 680x0 processor with a programmable memory management unit (PMMU). There is no way to run it without one. This reduces the list of possible processors to 68020+68851, 68030, 68040, 68LC040, 68060. All of these processors are supported as of 1.2.13pl10. This list of processors excludes the 68000, 68010, 68EC020, 68EC030, 68EC040. Linux/m68k can never run on these processors as they lack a PMMU and an interface for an external one (this is true for all machines but some pretty old Suns :-).

The following Amigas have the "right" processor built-in: A3000, A3000T, A4000/040 (not the A4000/030, which has a 68EC030 processor)

and A2500. There has been a report that the last A4000/40s produced by Commodore were shipped with 68LC040's. In that case, you will need a kernel with FPU emulation compiled in (see ``the FTP site list'' for the correct location).

The following Ataris (or clones) have the "right" processor built-in: Atari Falcon, Atari Falcon with Afterburner 040, Atari TT, and Medusa. The standard Falcon does not have an FPU built in. In this case you will need a kernel with FPU emulation compiled in. Any processor upgrade card with a 68040 or 68030 (like PAK/3 with or without 68881 or 68882) is able to run Linux.
Notes:

1. In some of the older TTs there is a bug in the PAL controlling the access to the FPU. This may cause a crash (see ``Known Bugs'').

2. On the Amiga, there exists a program called "lawbreaker" (part of the Enforcer package). This program allows you to check whether you have a working PMMU or not (it needs to generate 5 hits in combination with Enforcer, where the last one is an alert).

3. The FPU emulation does not yet support all transcendent functions and not all supported functions have full precision implemented.

4. The standard 2.0.28 kernel which can be found via FTP will not work with FPU emulation (FPU emulation is not distributed in the main kernel due to copyright concerns, see ``the FTP sites list'' for the location of kernels with FPU emulation).

3.2. RAM

It is possible (but very difficult) to boot Linux/m68k with as little as 2 MB. Now you know that the kernel works on your system: that's it. If you want to work with it you should have at least 4 MB (8 MB with an X server).

Notes:

o On the Amiga only the size of your Fast RAM is relevant. The Chip RAM is only used internally for graphics, sound and floppy data; it is not used by normal programs.

o If you have an Amiga with 16-bit expansion RAM on a GVP card, see the ``16-bit RAM'' section.

3.3. Hard Disk

If you want to do more than just boot Linux/m68k you will need 60 MB or more of free space on your hard disk and a supported hard disk controller. Add another 20 MB to the base requirements to use X.

In addition, you'll need some swap space. Any amount will do (and you will need less if you have more RAM). 16 MB of swap space is a fairly reasonable size for most systems.

3.4. Software

Amiga: In order to run amiboot you need AmigaOS 2.0 or higher (expansion.library V36 or later).

Amiga: amiboot works with SetPatch and RsrvMem (part of Emplant) running. you can start amiboot with VMM running (see ``Known Bugs'' for how to do this).

4. Similarities and differences between Linux/m68k implementations

4.1. Similarities

All code that depends only on the processor (i.e. paging, system calls, parts of the interrupt handling and of course those parts of Linux that were hand optimized by writing the code in assembler) has to be ported to Linux/m68k only once. This means that, with enough memory, the Amiga and the Atari may use the same kernel image. Another big bonus is that all user programs (= binaries) should work on any machine running Linux/m68k no matter whether the machine is an Amiga, Atari or VME system (or any future platform) as long as no machine-specific devices are used (see below).

4.2. Differences

All code that depends on the hardware is machine dependent and with very few exceptions which are in the kernel (timer, a small part of interrupt handling, startup code) has been put into modules called device drivers. Writing device drivers makes up most of the porting work.

5. The current status of Linux/m68k

5.1. General

What has been done?

The kernel (this means all the processor-, MMU- and FPU-specific stuff) has been ported.

Almost all of the hardware-independent drivers have been ported: Ram disk, memory, pty, tty, vt, (C)SLIP, PPP, multi-disk (MD), networking, and general SCSI and IDE stuff.

Also the following filesystems have been done: minix, ext2, msdos (including umsdos and Win95 VFAT), proc, isofs, affs, nfs, and ufs (affs = Amiga file system). Both Amiga and MS-DOS partitions can be used.

Starting with the 1.05 release of e2fsprogs, new filesystems are created using the common ext2 format (as used by Linux/i386). Filesystems compatible with kernel 1.2.13pl4 and later can be used in Linux/m68k 2.0, but before upgrading to 2.2 it will be necessary to byteswap your filesystem (see ``How To Byteswap Your Filesystems'') to put it into the common format. The common format can be read from and written to by Linux on all processors, as well as the GNU Hurd.

An X server exists that uses the frame buffer device interface. Frame buffer devices exist for both native Amiga and Atari graphics in the kernel. The list of supported hardware should be exhaustive, i.e. if it isn't in here or in ``Work In Progess'' it isn't supported at all. If you find omissions, please report them.

5.2. Amiga

Supported built-in hardware:

A3000 SCSI, A4000 IDE, A1200 IDE, serial port, parallel port, mouse, keyboard, built-in graphics (OCS, ECS and AGA), timer, floppy disk drive (DD/HD, Amiga and PC formatted disks), sound, and real-time clock of A2000, A3000 and A4000.

All RAM expansions are supported (but see notes on ``16 bit RAM expansions'').

Supported SCSI cards: A2091, A590, GVP Series II (including HC+8, A4008), Phase5 Cyberstorm and Cyberstorm II SCSI options, Phase5 Blizzard 1230IV/1260 SCSI options, Phase5 Blizzard 2060 68060+SCSI card and Phase5 Fastlane Z3 SCSI card. If you have an A4000/040, see the section about the ``A3640 Zorro II Bug''.

Supported Ethernet cards: Ariadne, Hydra, A2065

Supported IO cards: BSC Alfa Data MultiFaceCard III, GVP IO-Extender.

Supported graphics cards: Phase5 Cybervision64 (not including 3D version)

5.3. Atari

SCSI, ACSI, Falcon IDE, all built-in serial ports, keyboard, Atari mouse, parallel printer port, RTC clock, floppy disk (DD/HD/ED), built-in Atari graphics (ST/TT/Falcon/Medusa), beep (all) and sound (Falcon/TT) are supported. The ET4000 and the Mach64 cards used in the Medusa are partially supported (you can't change the resolution).

Linux's Minix FS is compatible with the Minix V2 FS used with MiNT.

Supported RAM cards: FX-card (Falcon), Magnum (Falcon)

Supported Ethernet cards: RieblCard, PAM's VME boards (most Lance-based Ethernet cards should work)

Screen extenders: Screenblaster, Onscreen work, others should work too.

Other peripherals: Atari Laser Printer

5.4. VME

5.4.1. Motorola MVME166 and MVME167 boards

(provided by Richard Hirst)

There are multiple VME boards out there on which Linux/m68k could run. There is currently one port for the Motorola MVME166 and MVME167 boards. These are complete systems on a card, so there's no need to support any external controller cards:

o 68040 at 25 or 33MHz (at least)

o 4 to 32MB DRAM (maybe more)

o CD2401 four channel serial controller

o NCR53C710 SCSI controller

o Parallel port (currently unsupported)

o Intel 82596CA Ethernet controller (under construction)

o VMEchip2 VME interface chip

o PCCchip2 local controller chip

o VSBchip2 (MVME166 only)

o MK48T08 BBRAM and TOD clock

o 68230 PIT

The source is based on 2.0.8 at present. The system will happily loop building the kernel for hours on end with no problems (no '040 MMU bug here!) It takes about 20 minutes to build a kernel.

More information can be found at Richard's VMEbus port page <http://www.sleepie.demon.co.uk/mvme166.html>.

5.4.2. MVME 162

A port to the MVME162 board has been made by Vaughn Skinner <vaughn@solid.net>. It is based on Richard Hirst's port to the MVME 166 and 167.

5.4.3. Other VME Boards

Please see the ``VME Projects'' section.

5.5. Unsupported

There is currently no Linux/m68k port for several 680x0 based computers that would be able to run Linux. The reason for this is rather simple: Nobody has written it. The reasons for that are many: The people who already have most/all of the knowledge on the Linux side of the port are usually busy maintaining/improving one of the existing ports. Another quite common reason is that no or only insufficient documentation on the hardware of that platform exists. Sun 3s are an even more special case: Unlike all other machines mentioned here, they don't use Motorola MMUs (except the Sun 3/80, which has an 68030).

See the ``Other Systems'' section of this FAQ for details on progress (or lack thereof) toward completing ports to these systems.

As far as I know, you can run NetBSD <http://www.netbsd.org/> on most Sun 3s and Macs with 680x0 processors (see the NetBSD FAQ).

5.6. Other processors

Linux also runs on several other platforms in varying states of usability:

o Alpha (Linux/AXP): <http://www.azstarnet.com/~axplinux/>

o PowerPC processors (Linux/PPC): <http://www.linuxppc.org/>

o PowerMacs using OSF Mach microkernel:
<http://www.mklinux.apple.com/>
o Sparc processors (SparcLinux):
<http://www.geog.ubc.ca/sparclinux.html>

o I think I heard some rumors about an Intel version too ;-)

This list is not exhaustive: More complete and more current versions of this information can be found at the Linux Mailing List Archives <http://www.linux.ncm.com/> (which now appears to be dead).

5.7. Misconceptions about Linux/m68k

5.7.1. The Linux/m68k port is "under development" or "experimental"

False. Linux/m68k is at least as stable as Linux on Intel, Alpha and Sparc systems. Furthermore, Linux/m68k was the first stable port of Linux to any other (non-Intel) processor.

There is development on additional hardware drivers and additional machine ports (like implementations for the Macintosh, Apollo and Sun 3), but this is the same "development" that is underway on other platforms.

5.7.2. Linux/m68k isn't popular

False. Over 440 people have registered using Linux/m68k (and this is strictly optional). Many hundreds more are using it on systems without Internet connections.

Linux/m68k's usage on systems capable of running it is probably equivalent to that of Linux on Intel platforms (on a percentage basis).

Over 350 people participated in the call for votes for comp.os.linux.m68k, which took place over a year ago (when Linux/m68k was in less widespread use).

5.7.3. Porting Linux/m68k to my system is useless because there is *BSD for my system

False. Linux has many features that make it preferable to NetBSD or OpenBSD or SpinoffGroupOfTheWeekBSD. The most impressive feature is that there is virtually no Berkeley code in the kernel: it is written from the ground up to comply with POSIX and other standards (XPG, SVID, etc.).

Linux is also highly popular on Intel platforms (to a much greater degree than BSD). This popularity, combined with 99.9% source compatibility, means that virtually any program that runs on Linux/i386 (and doesn't use non-portable features like SVGAlib) can be compiled and run on Linux/m68k.

6. Installing Linux/m68k

Get one of the ``installation guides'' available and follow the procedures. You shouldn't have any problems, just bear in mind that many of them were written for 1.2 and some of the filenames have changed.

When you're done, register yourself at the Linux/m68k Registration Site <http://www.cs.kuleuven.ac.be/~geert/Linux/m68k/>.

7. Sources for information, sources and binaries

7.1. Installation Guides

An installation guide for the Amiga is available at <http://www.informatik.uni-oldenburg.de/~amigo/inst.html>. It is also available in various formats from <ftp://ftp.informatik.uni-oldenburg.de/pub/amiga/linux/local/docs/>. Although the guide was written for the Amiga, many things are also useful for Atari users.

An Atari-specific install guide can be found at <http://www.gti.net/azog/linux68k.html>; another one can be found at <http://zippy.spods.dcs.kcl.ac.uk/~tomlin/flinux.html>.

7.2. Other Documents

Further documents can be found at the Linux Documentation Project's Home Page <http://sunsite.unc.edu/LDP/>. These documents were originally written for Linux/i386, but many are useful for Linux/m68k users too (e.g. HOWTOs on UUCP, PPP and the general Linux FAQ).

A FAQ on Motorola chips (including the 680x0 microprocessors) is available at <http://www.oise.on.ca/~rboys/m68kfaq.html>.

Last but not least: Look into the Documentation directory of the 2.x kernel trees.

7.3. Newsgroups

comp.os.linux.m68k
The group comp.os.linux.m68k is intended to further interest in, and development of, the port of the Linux operating system to the 680x0 architecture. All discussion in the newsgroup should be in English.

comp.os.linux.development.system
This group is on Linux kernel development only. From time to
time it contains messages dealing with the Linux/m68k kernel.

comp.os.linux.announce
This group announces new Linux-related products. Announcements
for new versions of Linux/m68k may be found there.

maus.os.linux68k
This group deals with Linux/m68k only. The languages currently
used are German and English. This newsgroup is also available
via FidoNet (LINUX-68K.GER).

comp.unix.amiga
This group is for discussions on Amiga Unix, NetBSD and
Linux/m68k on the Amiga.
de.comp.sys.amiga.unix
Similar to comp.unix.amiga, but in German.

7.4. Mailing Lists

There is one mailing list for Linux/m68k, which is named linux-m68k.
As there is a newsgroup for Linux/m68k, topics on this list should be
restricted to development issues if possible.

(provided by Benjamin Lorenz)

You can subscribe to linux-m68k@phil.uni-sb.de by sending a mail to
majordomo@phil.uni-sb.de, with a random subject and a single line in
the mail body containing "subscribe linux-m68k". You may want to
subscribe to linux-m68k-digest@phil.uni-sb.de instead: in this case,
you will receive one mail per day containing all mails to the list
from the last 24 hours. If you prefer to read mail in this way, please
unsubscribe from linux-m68k to reduce net load!

You can download archives from the digest mails! They are stored at
<ftp://ftp.phil.uni-sb.de/pub/linux-m68k/mailinglist>.

Another mailing list archive that supports searching can be found at
<http://aire.ncl.ac.uk/Atari/Mailing-Lists/Linux-m68k-phil-
List.index.html>.

The kernel list is also available from sunsite.auc.dk as a nntp news
feed ( <nntp://sunsite.auc.dk/sunsite.linux.m68k>). It is the fifth or
so member on the mailing list so it's fast.

Other mailing lists are available for more specialized purposes; I
recommend visiting the Linux/m68k Home Pages
<http://www.clark.net/pub/lawrencc/linux/> for further details.

7.5. WWW sites

o The Linux/m68k Home Pages (Chris Lawrence):
<http://www.clark.net/pub/lawrencc/linux/>

o Linux/m68k Registration Site (Geert Uytterhoeven):
<http://www.cs.kuleuven.ac.be/~geert/Linux/m68k/>

o Dirk Wetter's Linux/m68k WWW page: <http://bunsen.pci.uni-
hannover.de/linux68k.html>

7.6. FTP sites

o Linux/m68k 2.0 and 2.1 kernels:
<ftp://sunsite.auc.dk/local/os/linux/680x0/> or
<http://sunsite.auc.dk/ftp/local/os/linux/680x0/>.

o The Linux/m68k server: <ftp://ftp.uni-
erlangen.de/pub/Linux/LOCAL/680x0/>.

o Mirrors of this server include (please use the one nearest to you,
most of these mirrors are updated daily):

o <ftp://ftp.belnet.be/packages/Linux-680x0/>

o <ftp://ftp.fu-berlin.de/pub/atari/linux/>

o <ftp://ftp.funet.fi/pub/Linux/BETA/680x0/>

o <ftp://ftp.germany.eu.net/pub/os/Linux/Mirror.SunSITE/>

o <ftp://ftp.informatik.tu-muenchen.de/pub/comp/os/linux/680x0/>

o <ftp://ftp.informatik.uni-oldenburg.de/pub/linux/680x0/>

o <ftp://ftp.nvg.unit.no/pub/linux/680x0/>

o <ftp://ftp.phil.uni-sb.de/pub/linux-m68k/erl/>

o <ftp://ftp.spc.uchicago.edu/pub/linux/680x0/>

o <ftp://ftp.tu-clausthal.de/pub/systems/Linux/680x0/>

o <ftp://sunsite.cnam.fr/pub/Atari/Linux68k/mirror/erl/>

o <ftp://ftp.twi.tudelft.nl/pub/Linux/680x0/>

o <ftp://ftp.unina.it/pub/linux/linux68k/>

o <ftp://src.doc.ic.ac.uk/computing/operating-
systems/Linux/tsx-11-mirror/680x0/>

o <ftp://tsx-11.mit.edu/pub/linux/680x0/>

o Please tell me if your favorite mirror is not on this list.

o The kernel source for Linux/m68k can be found in 680x0/v2.0/ and
680x0/v2.1/, a lot of binaries in 680x0/bin/. A few more tools
reside in 680x0/tools/.

o Other Linux/m68k FTP sites include:

o <ftp://ftp.phil.uni-sb.de/pub/linux-m68k/>

o <ftp://sunsite.cnam.fr/pub/Atari/Linux68k/>

o The two Linux servers (sources for you to port to/compile on Linux/m68k):

o <ftp://tsx-11.mit.edu/pub/linux/sources/>

o <ftp://sunsite.unc.edu/pub/Linux/system/>

o Linux on Amiga: <ftp://ftp.informatik.uni-oldenburg.de/pub/amiga/linux/local/>

o Various stuff: <ftp://ftp.phil.uni-sb.de/pub/linux-m68k/>

o Kernels with FPU emulation are available from <ftp://ftp.nocrew.pp.se/pub/linux/>.

The following addresses are known to offer FTP via e-mail:

o ftpmail@info2.rus.uni-stuttgart.de <mailto:ftpmail@info2.rus.uni-stuttgart.de>
o ftpmail@ftp.inf.tu-dresden.de <mailto:ftpmail@ftp.inf.tu-dresden.de>

o ftpmail@informatik.uni-oldenburg.de <mailto:ftpmail@informatik.uni-oldenburg.de>

To get more info on FTP-mail send a mail with subject "help" to one of the addresses mentioned above.

7.7. Modem

If you have a modem, you can get Linux/m68k from the following location in Germany:

System name: nasim
Phone: +49 89 5469593, ZyX19200
Login: Anon-uucp: nuucp - no password / ZModem: gast - no password
Contents: full 680x0-tree of tsx-11 in /pub/linux-68k
Get first: index file /pub/linux-68k/ls-lR.nasim.linux-68k.gz
Other features: provides uucp access to 680X0 channel (read only) and the linux.act.* news-groups
Admin: Frank Bartels <knarf@nasim.cube.net>

7.8. Distributions

There are no distributions available via FTP at the moment. ALD (= Autoren Linux68K Distribution) for Atari is available from Whiteline.

7.9. IRC (Internet Relay Chat)

An IRC channel for Linux/m68k exists, called #Linux68k. Start irc and select one of the servers of LinuxNET, such as irc.blackdown.org. A list of servers can be found at <http://www.blackdown.org/LinuxNET/LinuxNET.html>. Just do a

/join #Linux68k

and look out for others. If nobody is there, there is a simple reason for this: you are the first to join this channel (actually, the first one to join a channel creates this channel). There already is a well established #Linux.

Note: The attempt to establish a channel #Linux68k via the "regular" IRC servers more or less failed because of many, many net splits. LinuxNET is much more reliable.

7.10. Magazines

Linux Journal <http://www.ssc.com/lj/> (ISSN 1075-3583) is the monthly magazine of the Linux community. It is aimed at everyone from the casual user to die-hard kernel hacker. In the US, most large booksellers carry the magazine.

Linux Gazette <http://www.ssc.com/lg/> is a monthly on-line publication with tricks and tips from ordinary users, along with longer how-to articles. You can read it on the World Wide Web at the location above; issues are also available as Debian packages.

7.11. Books

There are a gazillion Linux books on the market these days. In my opinion, you can't go wrong with the books publised by SSC and O'Reilly: they are two "class acts" in the Unix community.

A few particular selections:

Running Linux by Matt Welsh and Lar Kaufmann (O'Reilly) is probably the definitive book for new Linux users. It includes extensive coverage of virtually every topic under the sun. Welsh's earlier book Linux Installation and Getting Started (LDP and SSC) is also good (and is less expensive).

The Linux Network Administrator's Guide by Olaf Kirch (LDP, O'Reilly and SSC) is a good companion to Running Linux. The title is something of a misnomer, as it is handy even for single-user workstations connected by Ethernet or a serial link.

Inside Linux by Randolph Bentson (SSC) is aimed at the Linux user who wants to know more about the history of Linux and the internals of Unix in general.

The Linux Sampler (SSC) is a selection of articles from the early issues of Linux Journal, including many of historical interest.

The Linux Bible (Yggdrasil) is big. It includes hard copy of Linux Installation and Getting Started, The Linux Network Administrator's Guide, other LDP manuals and a selection of HOWTO's. An accompanying CD-ROM contains all these documents and more. A very cost-effective way to get started with Linux.

Linux in a Nutshell by Jessica Perry Hekman (O'Reilly) is a desktop handbook that contains a brief reference to virtually every Linux

command, as well as sections on the bash and tcsh shells and regular expressions.

Books distributed by the LDP can be found at the LDP's home page <http://sunsite.unc.edu/LDP/>.

## 8. Recompiling Linux

(Much of this section provided by Jesper Skov)

Since the release kernels found at the various Linux/m68k sites are compiled for the average user, they contain drivers for just about every piece of hardware supported by Linux. They will also be compiled so they can be run on all the processors in the Motorola 68000 family.

This scheme enables everybody to boot Linux, but it also reduces the performance of Linux: drivers for hardware you don't have or use take up (non-swapable) memory, and in case of processor specific programming, it is required to check which set of instructions to run.

Therefore, if you are a bit adventurous and have time to spare, you should recompile a kernel for your machine configuration. Especially if you are not a kernel hacker (i.e., you don't care about all those 2-3 line patches :) and use the same kernel for several days/weeks, the time will be well spent.

Recompiling your own kernel will make it possible to configure it to your exact machine configuration, thus giving the best performance possible.

### 8.1. Finding The Sources

The Linux/m68k sources are available by ftp from sunsite.auc.dk in "/local/os/linux/680x0/vx.x", x.x denoting the latest version numbers.

The sources are also mirrored at the sites listed in ``FTP Sites''.

### 8.2. What You Need to Recompile

You will need at least gcc version 2.7.2 (preferably 2.7.2.1 or later) to compile the kernel.

Recompiling the kernel for the MC68060 processor requires binutils 2.7.0.3 or later, fixing a linking problem with the ifpsp files.

Linux 2.1.x and later require binutils 2.7.0.3 (or later) with the CHIP fix. This makes it possible to specify which processor (chip) the instructions should be assembled for. Thus it is now possible to write mnemonics instead of opcodes for the bigger processors which eases the reading of the code and removes the problem of wrong mnemonic/opcode translations.

GCC can be found at any of the ``Linux/m68k ftp sites''. The required version of the binutils package can be found at <ftp://sunsite.auc.dk/local/os/linux/680x0/bin/>.

8.3. Submitting Changes

Linux/m68k releases are built and released by Jes Degn Soerensen. "Built" means that you can write a patch against the current version or patchlevel and send it to them or the mailing list and they will integrate it into one of the next releases. Make sure you state against which version the patch was made. Please note that Jes has no way to test Atari-specific patches.

Note: If you patch processor-specific code (e.g. 68030 vs. 68040 MMU or FPU) make sure that you document the dependencies.

8.4. Bug Reports

Send bug reports to the author of the code or to Jes. Probably a better approach is to post it to the linux-m68k mailing list or to the appropriate newsgroup. If there are bugs that will probably stay in the code for an extended period of time let me know so I may publish them here.

8.5. Known bugs

8.5.1. TT-FPU bug

Problem:

Linux reports *** COPROCESSOR PROTOCOL VIOLATION *** FORMAT=9 or something similar.

Fix:

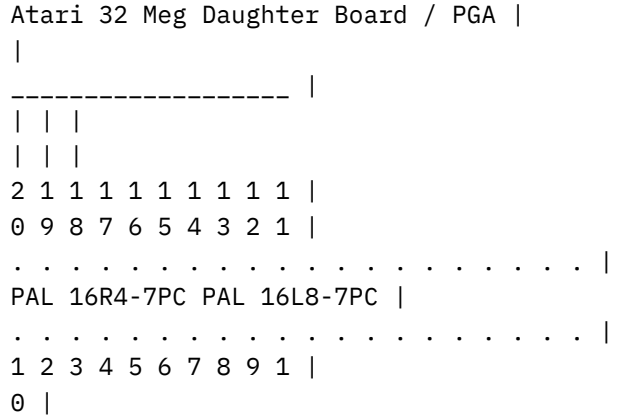
Pull the 16L8 PAL's pin 11 free (this is the signal 'XBG') and solder it to +5V. This prevents the PAL from tri-stating AS and DS until XBGACK has gone low.

To make your 32 MHz daughter-card work:

1. Pull pin 11 of the 16L8 PAL out of the board

2. Solder pin 11 of the IC to +5V (pin 20 of 16L8)

****This applies to the CA400771 32 MHz daughter board****
**********Other boards should not have this bug**********



CA400771 |
_____|
|
|
___|

8.5.2. Amiga with GVP 16-bit RAM

Problem:

When using a GVP card with 16 bit RAM on an Amiga with 68040
Linux/m68k dies.

Fix:

Unfortunately, there is no known solution to that problem. So your
best bet is to get some real 32 bit RAM. The 16-bit RAM may still be
used as a ramdisk using the z2ram device, but you must disable it as
normal RAM (-m option of amiboot).

Quoting from the README for amiboot:

If you have some non-AutoConfig memory you want to use under Linux, or if you
want to disable some parts of your memory (e.g. Zorro II RAM on '040 based
systems), you have to use a memory file and the --memfile option. This file
contains information about the memory chunks you want to use under Linux. The
format for the file is:

```
chipramsize
[0xfastchunkaddr fastchunksize]
[0xfastchunkaddr fastchunksize]
...
```

For example, if you don't want Linux to use your 2nd meg of chipram, you would
create a file that looks contains only:

```
1048576
```

If you had 1M of chip ram, 2M of 16 bit FAST ram at address 0x200000 and 16M of
32 bit FAST ram at address 0x80000000, and you didn't want Linux to use the
slow 16 bit FAST ram, you'd create a file that looks like:

```
1048576
0x80000000 16777216
```

The memory file can also be used to specify in which block of memory the kernel
will be put. Normally Amiboot will put the kernel in the first block of Fast
RAM it will find. If you use a memory file, it will put the kernel in the first
block of fast RAM you specify.

8.5.3. Zorro II DMA Bug on A3640 rev 3.0

Problem:

You get strange system crashes and segmentation faults with a SCSI controller and an Amiga 3000 or 4000 with a Commodore A3640 revision 3.0.

Fix:

The immediate fix is to make your SCSI controller stop using DMA. Add the kernel parameter wd33c93=nodma:1 to the boot command you are using.

A better solution is to replace the A3640 with a newer version of the card or a third-party card like the Phase5 Cyberstorm, Warp Engine, QuikPak 4060T, or Apollo 4060.

8.5.4. MC68060 performance issues

(provided by Jesper Skov)

Problem:

In order to streamline the design of the MC68060, Motorola left out the implementation of a few addressing modes and instructions. The '060 remains user-level compatible with the other family members by emulating these addressing modes and instructions in software.

Whenever the '060 encounter an unimplemented instruction, a special exception is taken that enters the ifpsp (Integer & Floating Point Software Package) part of the kernel. Here the instruction is emulated and processing is resumed.

Obviously, this adds an overhead to the use of the system and since gcc 2.7.2 uses the unimplemented instructions for 64 bit multiplication and division there is reason for concern. Judging from my tests (highly inaccurate :) I expect a boost of at least 10% when applications can be recompiled with an 060 aware gcc (that would be release 2.8.0, due out last year ;)

Fix:

Recompile applications with an 060-aware gcc when available.

9. Future Development

I would like a list of projects planned/started, similar to the Linux Projects FAQ. If you send me info, I will put it into this section.

Please note that a lot of these are rather old. I have marked the ones that haven't had any recent activity with ? (these may revert to unclaimed status if I don't get mail from someone saying that they are being done).

9.1. General

o Creation of a freely available Debian distribution for Linux/m68k. Send mail to debian-68k-request@lists.debian.org with the word "subscribe" in the message body. Mails should be sent to

debian-68k@lists.debian.org. Please do not join the list if you are not able to actually work on the packages. Testers are not yet needed (it's too early for that).

o A port of the Generalized Graphics Interface <http://synergy.caltech.edu/~ggi/> (a kernel-level I/O abstraction) to Linux/m68k: Geert Uytterhoeven <Geert.Uytterhoeven@cs.kuleuven.ac.be> (?). (Neat side effect: A GGI port would make it fairly easy to provide SVGAlib emulation for Linux/m68k.)

o ? Integration of VME stuff into main kernel tree: Richard Hirst <srh@gpt.co.uk> and Jes Degn Soerensen <Jes.Sorensen@cern.ch>.

o Atari TOS emulation: The OSIS Project <http://www.nocrew.pp.se/osis/>.

o AmigaOS emulation: The Amiga Replacement OS project <http://www.lysator.liu.se/amiga/aros/>.

o (Unclaimed) Rewrite of 68882 FPU emulation under GPL or under a less restrictive BSD-style license (like the MIT license).

o (Unclaimed) Macintosh emulator (based on Shapeshifter, perhaps?)

9.2. Amiga

o ? Drivers for Arcnet cards are in alpha/beta: Frank Neumann <Frank.Neumann@informatik.uni-oldenburg.de>.

o ? Support for the Oktagon SCSI controller is planned: <kcozens@io.org> and <shermane@ct.picker.com>.

o A frame buffer device for the Spectrum, Piccolo, Picasso II and SD64 graphics cards is in the works: Frank Neumann <Frank.Neumann@informatik.uni-oldenburg.de>.

o ? Support for the A2410 and DMI Resolver graphics boards is planned: Topi Kanerva <topi@susanna.oulu.fi> and Jes Degn Soerensen <Jes.Sorensen@cern.ch>.

o Support for the Commodore A2232 7-port serial card is under development: Eric van Dijken <E.vanDijken@PTT-Telecom.nl>.

o Support for the Commodore A2024 monitor (a high resolution grayscale monitor): Frank Eibisch <ergocat@minet.uni-jena.de>.

o Support for Phase5 PowerPC/68060 (PowerUp) boards: Roman Zippel <zippel@fh-brandenburg.de>, Jes Degn Soerensen <Jes.Sorensen@cern.ch> and Jesper Skov <jskov@cs.auc.dk> (Phase5 contact person).

The following drivers were asked about (or I thought of them) but nobody has reported interest in writing them:

o Concept and code for the use of chip ram and the blitter from user space.

o Support for Utilities Unlimited Emplant serial and SCSI.

o Support for the Commodore/DKB A4091 SCSI card and the A4000T built-in SCSI controller (could be based on the NCR53C710 driver for the MVME166/167 boards?)

o BSC Alfa Data MultiFaceCard II support. Docs available from Joerg Dorchain <dorchain@mpi-sb.mpg.de>.

o Improved Cybervision support (on-the-fly mode changes, 15/16/24 bits-per-pixel framebuffer support, 3.2-based XF68_Cyber, new 3D version, etc.). Perhaps part of GGI effort?

o Warp Engine SCSI controller support.

o Prodev Merlin graphics card.

o Commodore A2090 SCSI controller.

o Commodore Bridgeboards (A2286 in particular).

o Access to ISA cards via GoldenGate/BridgeBoard (as in OpenBSD <http://www.openbsd.org/>)

9.3. Atari

o Port to Hades: (I can't remember)

9.4. VME

9.4.1. Motorola MVME147 board

A port to the MVME147 board has been started by Dave Frascone <chaos@mindspring.com>. It is currently in alpha testing.

9.4.2. Motorola MVME17? boards

These are MVME systems with 68060s. A port of a relatively recent kernel should be pretty simple, starting from the MVME 166/167 port.

9.5. Other Systems

9.5.1. Apple Macintosh

Rob Pelkey <rpelkey@bates.edu> is coordinating the Linux/Mac68k project, a fresh effort to port Linux/m68k to the Mac. More information on this project is available at the Linux/Mac68k Home Page <http://www.bates.edu/~rpelkey/linux-mac68k/>.

9.5.2. Hewlett-Packard/Apollo Domain Workstations

The first pre-alpha is now available at <ftp://www.ba.be/pub/apollo/>. It apparently only runs from a ramdisk, but it does support the monochrome framebuffer and the keyboard. Contact Peter De Schrijver <p2@linux.cc.kuleuven.ac.be> for

more details.

9.5.3. Sun 3 Workstations

Pekka Pietikaeinen <pp@netppl.fi> is the point of contact for this port. A patch relative to 2.0.25 is available from him.

9.5.4. HP 9000/300

(provided by Jim Partan)

Philip Blundell <pjb27@hermes.cam.ac.uk> is apparently working on a port to this system. More details can be obtained from him.

9.5.5. NeXT, etc.

As far as I know, there is nobody working on ports to these systems at the present time, but there has been some interest from users.

10. Common problems

A lot of these no longer apply to new users, but may be of interest to people who have been running Linux/m68k for a while.

This is by no means an exhaustive list. If you have any suggestions for entries, please send them to me.

10.1. I can't find the man page for XXX

There is a *wealth* of Linux documentation out there for the original PC Linux which almost always applies to Linux/m68k. Check out the documentation at your favorite Linux FTP site.

10.2. How can I access my SCSI tape drive?

Use /dev/st0. Be aware that your tape drive must be up and running at boot time so that Linux can recognize it and you can use it.

10.3. Where did all my Amiga's chip memory go?

It's still there, but the kernel doesn't offer it to the user. It is used by drivers that use the custom chips (like floppy, framebuffer, and sound).

10.4. How do I access Linux partitions from AmigaOS?

There is an ext2 filesystem for AmigaOS (available at <http://titan.cs.bonn.edu/~fasten/>). It allows you to read/write ext2 partitions. Not all write operations are currently (version 0.3) supported. Important: Do read the "Known bugs" section.

Other ways to transfer files from Linux to AmigaOS are to use an msdos partition, an Amiga/PC formatted floppy with msdos file system (this requires a Mountlist entry on AmigaOS side), use of a partition with minix file system and the minix file handler on AmigaOS side (the driver is somewhat unstable) or by accessing the floppy / any (empty!)

partition directly via GNU tar.

You can also read and write Amiga partitions from within Linux (using the affs filesystem).

10.5. My SCSI bus locks up when I want to use my DAT drive

(provided by Frank Neumann)

This problem seems to be related to certain A3000 Amigas: probably only those with BootROMs. It has been discovered that if you have a DAT drive connected whose SCSI address is smaller than the smallest SCSI address of a hard disk in your Amiga, the bus will lock up very early (under AmigaOS, while the SCSI bus is being scanned: you can notice this by seeing that the SCSI LED is constantly lit and nothing happens). The solution is to use higher address for DAT drives (and maybe also for CD-ROMs) and the lower ones for direct-access media (read that as "hard disks").

10.6. My SCSI bus locks up when the kernel probes for devices

(provided by Frank Neumann)

Some devices dislike being polled on LUNs (logical units) other than 0. What can happen here is that the SCSI bus just locks up because the device does not answer the inquiry. Quite a couple of drives have already been added to the blacklist of "bad" devices in the kernel, but there are probably more. If you discover this behavior on one of your SCSI devices, you might try adding it to the blacklist (in drivers/scsi/scsi.c) yourself or ask someone to do it for you if you are sure about it.

If you think you're adventurous and want to fix the kernel for a specific SCSI device yourself, here is what you could do:

Under AmigaOS, use the scsiutil command (on Aminet) and its -i option to send an Inquiry command to that particular device. Write down its vendor identification, product identification and Product revision level. For instance, an Apple CD-300 CD-ROM drive might give (at the bottom) this output:

```
Vendor identification: SONY
Product identification: CD-ROM CDU-8003A
Product revision level: 1.9a
```

Now go into the kernel source tree and (under drivers/scsi/scsi.c) add your drive to the blacklist of drives that have problems (just search for "blacklist"). Recompile the kernel and try it out without the wd33c93= options you probably used so far.

If it works, you might want to send your change as a GNU context diff to one of the Linux/m68k maintainers.

10.7. I displayed a binary file, and now my console is totally screwed up

(provided by Frank Neumann)

Once in a while, it may happen to you that you try to read a binary file. Text viewers like more will interpret the input they get as control characters, to for instance change to an alternate character set. This may result in a strange looking prompt, made up of special characters. In such a case, you need to reset the terminal to its initial state. There are several ways to do this, here's what I use: You have to type (blindly):

echo ^V^O

Read this as: Control-V, Control-O. The sequence "Control-O" does just what we want: It resets the text attributes and character set, and also clears the screen. You have to mask the control character with Control-V, otherwise the shell would directly try to use the "Control-O" for its purposes.

You can also avoid this problem by replacing more with less.

10.8. Can I use both ELF and a.out libraries/binaries in my system?

(provided by Frank Neumann and Jesper Skov)

No problem. If you moved to ELF according to Andreas Schwab's hints (<ftp://tsx-11.mit.edu/pub/linux/680x0/ELF/README>), you already have a mixed system. All old a.out shared libraries, stubs, static libraries and simple object files (*.so, *.sa, *.o, *.a) are now in /usr/m68k-linuxaout/lib, except for libc and libm which remain in /lib. The ELF shared libraries are in the usual places (/lib, /usr/lib and maybe /usr/X11R6/lib and /usr/local/lib) and don't interfere with the a.out libraries.

When starting a program which is either a.out or ELF, the corresponding link loader (ld.so and ld-linux.so respectively) will determine what shared libraries are required and load them on the fly. This of course works for both a.out and ELF binaries. You only have to keep in mind that with a mixed system (using some binaries which require ELF libraries while others which require a.out libraries) both ELF and a.out libraries have to be kept in memory (in particular, but not limited to, libc and libm). This certainly costs valuable memory. So, the long-term solution will be a pure ELF installation (libraries and binaries).

You can download the ELF versions of the programs via FTP, download sources and recompile, or "Debianize" your system (I really don't recommend the latter unless you really know what you are doing).

If you install from Watchtower-2, you will have the a.out compatibility libraries but (hopefully) no a.out binaries.

Debian/m68k will support a.out compatibility libraries, but does not include any a.out programs.

Note: Concerning a.out libraries, a couple of people had problems with the last libc that was created (4.7.2). So we recommend staying with 4.6.27 which most people were using.

10.9. After installing a patch, the new files are in the current directory

Do a man patch. Understand what the -p option does. In case the rest of the patches install ok, add a -p0 to your command options. I usually use "patch -s -E -p0 < patchfile" (s: only report errors, E: remove empty files).

If you are in the linux directory, almost all kernel patches will apply with either -p1 (this covers all official Linux patches) or -p0.

10.10. I can't mount MS-DOS diskettes on my Amiga

On the Amiga, the floppy minor numbers are 0-3 for drives 0-3 using Amiga formatted disk and 4-7 for drives 4-7 using MS-DOS formatted disks (drive+4). Please name them mfd0-mfd3. Just in case you don't know how to create the device files: Do a mknod /dev/mfd(0-3) b 2 (4-7) and please read a book about Linux (even PC :-). Now you can do a "mount -t msdos /dev/mfd0 /mnt". In case this still doesn't work: Do a "cat /proc/filesystems" and check whether the kernel was configured to support msdos filesystems.
Alternatively you can use the mtools package. You can find a correctly configured and pre-compiled package on tsx-11 in the bin directory.

10.11. Less behaves weird when I press a key

The older versions of the root-filesys have the wrong device numbers for /dev/tty. Delete it and do a MAKEDEV std (you do have a somewhat current /dev/MAKEDEV, don't you?)

10.12. What are the current major/minor device numbers for /dev/xxx?

The address of the "official" version of MAKEDEV for Linux/i386 can be found at sunsite and mirrors in <http://sunsite.unc.edu/pub/Linux/system/Admin/>. A list of the major/minor device numbers can also be found in the kernel tree as Documentation/devices.txt.

Debian/m68k will include a MAKEDEV that is preconfigured for Linux/m68k.

10.13. How can I tell an a.out binary from an ELF one?

Use the file command. It will either tell you 'mc68020 demand paged' if it is an a.out binary, and give a longer (self-explanatory) description if it is ELF.

You can also use ldd. If it says something about a "DLL jump", the binary is in a.out format; otherwise, it's in ELF.

For statically linked binaries, ldd reports statically linked (ELF)
for ELF binaries. I have no idea what it says for a.out binaries,
because I don't have anything statically linked a.out any more (at
least, not that I can find).

10.14. GCC complains that it can't find shared libs while linking

(provided by Geert Uytterhoeven)

The current ld requires you to create links from *.so to *.so.6 for
all libs, so you should have e.g. libX11.so -> libX11.so.6,
libX11.so.6 -> libX11.so.6.0

Recent versions of ldconfig seem to take care of this automatically.

10.15. Linux recognizes my Amiga's XXX board, but it doesn't work

Linux/m68k can detect the Amiga's AutoConfig devices. That it is able
to detect and correctly classify these devices does not mean that the
kernel has an actual driver for that device. The list of supported
hardware given earlier should be exhaustive, i.e. anything that is not
listed is not supported. Note: turbo boards that appear as AutoConfig
devices are almost always supported (except for the SCSI controller,
if they house one).

10.16. I can't use ttyS3 and ttyS4 simultaneously on my Atari

This is perfectly normal: ttyS3 and ttyS4 correspond to different
physical external connectors on the Atari, but these connectors use
the same internal hardware (Channel A of the SCC).

10.17. Amiboot dies when I start it with VMM running

(provided by Martin Apel)

What happens is that amiboot gets loaded into virtual memory and
shoots itself out of accessible memory when disabling the MMU. But
fortunately there's an easy way to solve this:

Enter amiboot into the task list of VMM with code and data set to "No
VM". Then amiboot (version 3.0 or higher) should work correctly.

10.18. How do I byte-swap an ext2 filesystem?

Note: Michael Schmitz has written a mini-HOWTO on this topic, which is
more suited to people who are new to Linux. It is available at
<http://www.clark.net/pub/lawrencc/linux/ext2swap.html>.

IMPORTANT: Make sure you are using e2fsprogs-1.06-swapfixed or later!
The 1.05 and original 1.06 versions of e2fsprogs had serious bugs that
can corrupt your disks while byte swapping.

There are three reasons why you'd want to do this:

1. You want to share some sort of mass storage medium (Jaz or Zip
disks, hard disks, SyQuest media etc.) between Linux/i386 (or
another Linux port) and Linux/m68k.

2. You want to use ``the ext2 filesystem for AmigaOS''.

3. You want to use Linux/m68k 2.1.21 or later.

For the purposes of this discussion, "big-endian" refers to the ext2 filesystem format used by default by Linux/m68k 1.2.13 (pl4-10) and "little-endian" or "common" refers to the Linux/i386 ext2fs format.

Unless you have a lot of memory, you'll need to activate some swap space before doing the byteswap (if you haven't done so already).

There are two steps. First, you must run e2fsck -f on the partition to make sure it is completely error-free. Then use e2fsck -s to do the byteswap to the common format. Note that e2fsck -s will have no effect on a common format partition (so it's OK to use it if you're not sure).

You can see whether or not a partition is in the common format by running dumpe2fs on it. A warning message will be displayed if it is in the big-endian format.

Recent versions of e2fsprogs (1.05 and later) will create partitions in the little-endian format by default.

Linux/m68k 2.0.28 includes a warning about big-endian format filesystems. Note that Linux/m68k 2.1.21 and later 2.1 series kernels can't mount the big-endian format (support for them has been removed). You will have to convert your filesystems before upgrading to 2.2, when it is released. (However, it is possible to convert your filesystem while running 2.1.21 or later from a ramdisk.)

10.19. My kernel hangs at the login prompt

It is possible that you have an IDE controller on your system without any IDE devices attached to it. If you have been experiencing problems like this, you should upgrade to kernel 2.0.28. If upgrading doesn't fix the problem, ask for help in the newsgroup.

10.20. I just upgraded to 2.1.21 (or later) and modules don't work

You need modutils-2.1.23 or later. Note that these modutils are incompatible with kernels from 2.1.0 to 2.1.17, so you'll need to keep a copy of modutils-2.1.13 around if you plan on switching back and forth. The sources for modutils can be found at <ftp://ftp.redhat.com/pub/alphabits/>.

Make sure you apply the patch in the modutils archive. You will also need to apply Andreas Schwab's 2.1.21 patch, available on the mailing list. Note that some of the patches do overlap.

Modules in 2.1 series kernels also require running libc 5.4.17 or later (which in turn requires ld.so 1.8.5 or later). Don't run anything called libc 6 (aka glibc) unless you're Andreas Schwab (or really like life on the bleeding edge).

10.21. Where can I get Linux/m68k on CD-ROM?

(S.u.S.E. info provided by Christian Steigies)

In Europe, S.u.S.E. distributes a 4 CD set called "SuSE Aktuell 4.4". The latest edition is also dated December 1996. In addition to a direct mirror of erlangen's 680x0 tree, a mirror of ftp.phil.uni-sb.de's linux-m68k tree is included. Each set is 45 DM, or you can get 6 for 209 DM in Germany and 259 DM in "Ausland" (which I'm guessing means "outside of Germany": my only foreign language is French, sorry). S.u.S.E.'s web site is at <http://www.suse.de/> (German language only).

If you have already started using the Debian packaging system, iConnect Corporation distributes CDs of master.debian.org which are updated every 2-3 days and should include the unstable/binary-m68k tree. 2.0 (aka 1.3) snapshot CD's are $25.00 US (plus $5.00 US shipping and handling inside the US and $10.00 US elsewhere). Check out <http://www.i-connect.net/> for details.

10.22. How do I patch my kernel?

Once you have a copy of the Linux/m68k kernel, you should rarely need to get a completely new tree. Instead, you can patch the kernel to the next released version.

For example, if you have the 2.0.25 kernel tree already, you need to get the file linux-2.0.28.diff.gz via FTP (don't get the file with the word "native" in it unless you have the same version kernel tree for Linux/i386). Then use cd to get to the directory above your kernel tree (probably /usr/src), and make a copy using hard links to save some space:

```
cp -rl linux-2.0.25 linux-2.0.28
```

You may also want to change your symbolic link linux -> linux-2.0.25 to point to the new tree:

```
ln -sf linux-2.0.28 linux
```

This way, your links in /usr/include don't have to be changed every time you upgrade your kernel (i.e. you can link /usr/include/linux -> /usr/src/linux/include/linux instead of using the kernel version number hard-coded). Then, cd to linux-2.0.28 and type the following 2 commands:

```
rm -rf include/asm
zcat (path of linux-2.0.28.diff.gz) | patch -p1 -s
```

If all goes well, it will work for a minute or two and then return you to your shell's prompt. Make sure the patch applied correctly by typing find . -name '*.rej'. If no filenames are listed, everything worked perfectly.

Now do a make clean to delete all the backup .orig files left by patch, and then do a normal make config, make dep and finally make.

Once you've successfully made a copy of the new kernel, you can safely delete the previous version's tree using rm -r.

Miniproject: Someone with a bit of spare time might want to adapt scripts/patch-kernel to understand Linux/m68k diffs.

Please note that you will get rejected patches if you patch a kernel tree that you patched from the Linux/m68k mailing list (or from any other source). The easiest way to avoid this is to make a "clean" (i.e. distribution) kernel tree and another tree which you apply the patches from the mailing list to.

10.23. How do I choose what video mode to use with Linux?

This is done with the 'video' boot parameter. For details on what resolutions are supported, you'll want to read Documentation/m68k/framebuffer.txt and Documentation/m68k/kernel-options.txt in the Linux/m68k kernel source tree (the former document only appeared in 2.0.28).

You can also specify what font you want to use with the font option to 'video'.

For example, to boot into 640x480x4 mode on an Amiga with a 31 kHz or multiscan monitor, use video=vga.

10.24. How can I get my Jaz drive to work with Linux (or another OS...)?

Recent models of the Jaz drive (with firmware version H.71 and later) are shipped in a so-called "write-verify" mode. This mode causes problems for operating systems (like Linux) that can't run Iomega's proprietary drivers.

I (Chris) have been in touch with Iomega tech support, and they provided me with the low-level commands that allegedly get the Jaz drive into the correct mode. However, the commands they provided don't seem to work (probably (ab)user error, knowing my level of SCSI programming knowledge).

In the meantime, the only thing to do is find a Mac or PC with a SCSI interface and use Iomega's Jaz Tools software to disable the write verify mode. This can also be done with a registered copy of Shapeshifter on the Amiga.

More information about the Jaz drive and Linux (including the Jaz mini-HOWTO) can be found at Bob Willmot's Jaz-Linux information page <http://www.cnct.com/~bwillmot/jaztool/>.

10.25. When I use dpkg or tar, I get messages about a "broken pipe"

This usually means that you are running a buggy version of getty. The agetty and mingetty versions of getty are known not to have this problem, so replace your current getty with one of these.

10.26. Where can I get kernels with FPU emulation?

Kernels with FPU emulation are available from
<ftp://ftp.nocrew.pp.se/pub/linux/>. Hopefully, in the near future,
an FPU emulator will be written with a less restrictive license that
can be integrated into the main source tree.

10.27. I can't seem to boot from a ramdisk

Make sure you specify on the boot line "-r <ramdisk-name>
root=/dev/ram".

10.28. I can't execute programs in my current directory

As a security precaution, most systems come preconfigured to not
include the current directory in your path. The lazy way out is to
add '.' to your path, but I strongly recommend against doing that
(particularly if you are running as root).

The right way to handle this situation is to preface the program name
with "./".

10.29. When I run X, it complains about invalid modes

The easiest way to fix this is to change the "Modes" line in your
/etc/XF86Config to read:
Modes "default"

Later on, you can get Geert Uytterhoeven's fbset program and customize
your video modes.

10.30. When I run X on 2.0.28, I get Oopses

There is a minor bug in the 2.0.28 transparent translation code that
breaks framebuffer access. You should be able to obtain a patch for
this bug at James Troup's Linux/m68k pages
<http://thor.lib.chalmers.se/~jamest/>.

10.31. Kernel 2.1.X doesn't compile out of the box for me

This is usually because Jes doesn't have the time to test every single
configuration before releasing the kernel sources. Monitor the
mailing lists for patches (usually all the fixes have been posted
after about two days).

In addition, James Troup maintains a set of pages with the latest
patches and release announcements at
<http://thor.lib.chalmers.se/~jamest/>.

11. Famous last words

11.1. Credits

I want to thank everyone who contributed to this FAQ. There are many
people who did so by answering questions or by asking those questions.
Some sections are marked "provided by"; this means that the text was
originally written by that person but has been edited by Joerg or
myself.

Extra thanks to the following people for their suggestions and submissions:

o Martin Apel <apel@tecmath.de>

o Richard Hirst <srh@gpt.co.uk>

o Benjamin Lorenz <benni@phil.uni-sb.de>

o Frank Neumann <Frank.Neumann@informatik.uni-oldenburg.de>

o Jim Partan <jimp@waves1.whoi.edu>

o Raoul van Putten <rlputten@cip.informatik.uni-erlangen.de>

o Jesper Skov <jskov@cs.auc.dk>

o Christian Steigies <steigies@physik.uni-kiel.de>

o Geert Uytterhoeven <Geert.Uytterhoeven@cs.kuleuven.ac.be>

o Last, but certainly not least, Joerg Mayer <jmayer@informatik.uni-kl.de>, who started the ball rolling and wrote about 85% of this.

Opps, sorry. I don't use SAA files at all. I just play the sound.
Not that exciting.

For all? I want them for my self. ;-)

Seriously, is there someone who wants to help? Maybe we could try to
put togheter a list with games, publisher and if they doesn't excist
anymore, the progrmmer? Then we could try to get hold of who ever owns
the rights for them and contact them.

> with rather than starting more piracy arguments.

Exactly my point. We would get rid of all this talk about piracy and we
could also make the Atari more atractive because of alot of free good
games are available for it.

> If anything can come of this idea, I can provide ftpspace on a fast UK
> server with no access restictions.

Great. I will need help though and I would like not to to be in charge of
all this as I don't realy have the time to do it. This is if anyone want
anything to be done.

> I'd need to be 110% SURE that you had written permission from the author
> to distribute the game, though, before I'd add it to the site.

Another slight problem is that most games have some kind of nasty
copy protection. How would that be solved? Are there any games that
doesn't have it? :-\

Nope but I know of a good sound player (works on all falcons including the
Afterburner040 which some other don't). Mail: dave.murphy@zetnet.co.uk
about it. He might even add midi support if you ask nicely. He has
got a webpages as well where you can download it, but I don't have it
right here.

Some people just don't get it do they?
The point of asking permission to distribute ST games is to avoid stupid prats posting their "warez".
Sad. It really is.

Several days ago I attempted to contact a few programmers and software houses to gauge their
thoughts on making their old Atari software available for free distribution, as of yet I have
had no replies. If someone was to organise an attempt to contact programmers of Atari ST software
I would be happy to help. I contacted a few software groups that have put other old software
into 'public domain' such as Gremlin who have their old software on their website. Perhaps this would be a good place to start. If they reply i'll pass on their response.

Cheers
Rick.

You sounds like our man. :-)

A mailinglist could be a good idea so that we can get in touch with each
others in a easy way and pass information.

I will try to help as much as I only can.

Cool. Maybe setting up that mailinglist could be a good start which Frank talked
about. Then we could start to collect addresses and game titles to do a list
and then try to contact them. Maybe the best thing would be to use both email
and regular mail as well and why not fax if possible.

I don't know what kind of software you have! :^)
Try getting a hold of FastCopy, DCFormat, TLCFormat, etc. FastCopy is good.
You should be able to format the disk to 80 tracks @ 9 sectors per track,
_and_ put an IBM boot sector onto it.
The easiest way though is to format your disk on the IBM, TOS will read it,
so you can then write to that disk, and if the IBM can't read a disk it
has formatted then you are not the one with the problem! :^)

Any video game store should be able to supply it, since it's the same
cable used to connect a SNES, Megadrive/Genesis, Jaguar etc to a TV - in
the UK, at least.

Source record: 126911

Hi, anyone here who knows if it's possible to
make a postscript output (to printer or disk) with
GDOS (NVDI). I got an old sys driver but it doesn't
work properly, it can't find the `header.ps` file, even
if I copy it to every partion of the harddrive...

I have a +65 pages dokument in Papyrus format that I
want to send a friend, but he hasn't got an Atari
computer. Can I in some way print the dokument
to file in postscript format if I use NVDI?

Yeah it's a kind of problem to say atleast. I guess the chance
for getting a version without the copy protection is a bit to
small as well. :-\

## 4108. CAB Bug?

Newsgroup: comp.sys.atari.st
Date: 1997-02-27 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.95.970227101508.4705B-100000@moose.erie.net>
Source record: 126916

After getting the STiK configuration sorted out, CAB 1.5 has been working prettty reliably. But for some reason, the search function at www.dejanews.com does not recognize anything entered in the search box. It always comes back iwth a "null query" response. That is, it thinks you didn't type anything into the search box. Other web search engines (Lycos, Alta Vista) seem to work okay. Has anyone else had this problem with CAB on www.dejanews.com?

I'd also appreciate recommendations for the best supporting programs to use with CAB for the different file types (sound, graphics viewers, etc.)

The only patches I seen on the ASH site were for Calamus SL and
I <think> a patch for MagiC 4-5. A friend in Germany is always able
to get the latest and greatest, but it isn't from the ASH Web page.
It seems there is an ASH BBS that registered users can download updates
from. I know he always gets MagiC for TOS and Mac for no charge from
here. He is now using MagiC Mac 2. The upgrade from 1.2X didn't cost
a dime. Toad i'm sure will make out on this when it arrives. I know
that System Solutions offers a "freshen-up" for NVDI 4r3 to r6 for
free, but Toad is charging $20.00 for this (and I can't even get it
from them after I paid). But that is another story:(. I think that
most all of ASH's products are supported on this BBS. I almost
wish I had the number. For about $10.00 I can get the latest upgrade.
That is cheaper than the importers are getting.
Andres, do us a favor and post the BBS number:)

Mike

Hi John,

Same problem here. The MROS files are not included with the
upgrade at the Steinberg web site. I purchased Cubase second
hand as well, but the person that used it before me decided to
put the "upgrade" over the original files on the supplied disk:(.
I think there are some other files missing as well, but I don't
really know.

Mike

>use?

On my TT and under plain TOS (3.06) this option doesn't work at all.
As soon as I open a second window I get two bombs and that's it. Since
I had troubles with this option it never came in my mind to use it
with N.AES (yes I'm using that too). I just tried it now and yes
indeed with N.AES this option works fine.
But as I've said before, under plain TOS (and on my TT) it seems not to
work.
Nevertheless IMHO it's the best replacement desktop available for the
moment.

Get in touch with Chris Krowchuk of Computer Direct
(chris@compdirect.com). They manufacture the Direct60 clone that uses
the Hades board, and he's done extensive testing on just what works on
it - the compatability list is fairly long.

And for people in the Toronto area and surrounding, Chris will be
the special guest at TAF's March meeting (March 19th), at which he will
be demonstrating the Direct60, as well as making available a variety of
software and hardware as well as software upgrades. Time is 6:30 PM at
North York Centre in the Rose Room below the library.

>found on the ZIP and JAZ that require special cables) - that was VERY

Are you saying that the ZIP drive does not have a standard SCSII
connector? I thought it did? I thought I could just buy a ZIP drive and
buy a SCSII 2 cable from Maplins. And hey presto!!

I think I am going to get a zip drive, EZ135's are no longer produced,
and I don't want to go to the expense of a EZ230 :(

I have got a Falcon, running AHDI 6. Can someone please confirm that all
I need to do is buy the ZIP drive and a SCSII 2 cable (from Maplins
probably) and plug and go???

The above comment has me rather worried :(

On my TV, the border is black , the screen is white.

If the disk drive seeks, why not put a blank (formatted floppy) in it to speed up booting. STFM's should have TOS inside (ROM).
>
> Is this normal behavior or do I have a broken machine on my hands?

I'm using TOS 2.06.
And as for Auto programs and ACCessories, this is what I have installed:

AUTO PROGRAMS:

## 4125. spc to gif/jpg?

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: ae900@FreeNet.Carleton.CA
Message-ID: <5f7892$dae@freenet-news.carleton.ca>
Source record: 126733

I was wondering what if any software is available to convert spc image files to gif or jpg files. Any suggestions?

Highly unlikely. Time goes by, source gets lost, disks go bad. Memories fade!

It is likely that cracked versions of games will be the way to go with this;
raising that problem with authors is going to be an interesting one.

Or how about cracking original copies ourselves - it isn't that difficult. I
was employed for a short while to remove protection from older games when they
were rereleased as budget titles; I also had to use similar compression
routines that pirates used in order to cut the number of disks in the
re-release down (thereby keeping costs lower). Didn't get a jot of help from
the game authors or the guy who originally put the protection on (even though
it was him employing me :). I did change the odd cheat-code to get my revenge
though... but that's another story.

# 4127. JPEG image manipulation

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <857148954_OASIS_@husbands.demon.co.uk>
Source record: 126735

Hi to all out there.....

Could anyone suggest a program that will allow me to view JPG files and then alter the sizes ( I have some scanned JPG files and want to be able to trim them, and also to be able to produce thumbnail versions for my site )? I'm hoping for something without too many frills - cheap and cheerful! Any ideas?

Thanks in advance.

Simon

Shared libraries are really only useful in a multitasking environment,
otherwise only a single process would ever use them at a time anyway.
Of course there are benefits of being able to fix bugs without re-linking
the executable.

You may want to look at MiNT--it may have support for shared libs.

Also, shared libs, if not implemented correctly, may cause problems in
a multitasking environment with memory protection between processes.
Generally, shared lib code will reside in "shared, read-only executable"
memory space.

# 4130. Re: ATARI<-->PC MIDI files via 3.5" floppy

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: Sophie Delorme <sdelorme@netcom.ca>
Message-ID: <5f7bsj$t7a@tor-nn1-hb0.netcom.ca>
Source record: 126738

Boy is my face red! This turned out to be too simple, but it did require a bit of stick-to-itness. Thanks for all the help and as it turned out everybody had a little piece of the truth. This is what I learned:

It is true that a DOS machine cannot read a TOS disk, and it is equally true that an Atari cannot read DOS disx, but (and this is a big but) Atari can _write_ to a DOS preformatted disk providing it is 720k DD. This next part could be particular to my situation, but as it turns out the native software (in this case MTPro) needs to "export" the standard midi file and not just "save" it to disk. This takes a bit longer than a regular save to disk command (so long that for a while I thought something was wrong with the Atari) but it is crucial to the process in my case.

So now I'm off to move files and shuffle disks, make directories etc... with my faith in Atari fully intack.

So anyway... whatever you do, don't let anyone try to sell you some utility to convert midi files from Atari to PC.

Many thanks,

Andrew H.

The cable will need to be a 25-pin D connection on one end for the zip
drive otherwise you will need an adaptor. I got an adaptor for my zip
drive from Hisoft so you could give them a try if you need one.

# 4133. SILIconvention´97 Party

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: Tino Gietschel <t_gietschel@mail.netwave.de>
Message-ID: <3317B782.6CEB@mail.netwave.de>
Source record: 126741

```
================================================================================
SILIconvention'97 - Germany//Bremen - http://www.siliconvention.com
OFFICIAL INFO TEXTFILE v4.5
================================================================================

The Organizers of the FRIED BITS I-III,SILICONVENTION'94,BB SYMPOSIUM'96,
YELLING JAM PARTY and INTERCON'96 Party bring you the biggest computer-
party at Easter 1997.

The Siliconvention follows the very successful Fried Bits partys that were
held during the last years on the same time and location.

All Systems are welcome! That means we have lots of Competitions for the
following computers: ACORN, AMIGA, ATARI, C64, PC.

The SILIconvention should be seen as an alternative to the usual style of
taking parties.

In our opinion just renting a hall and putting a video-beamer and
some music-boxes into it isn't enough, there should be something more about
it.

Therefore we decided to organize a party which offers what we missed
at other parties so far :
Seperated competition-hall and sleeping rooms.
Showers, live acts, food and drinks at reasonable prices.
The seperation of rooms has the advantage that you may :
Sleep when you want to, watch any competition you like, go shopping,
or stay at the party-area and enjoy the great spirit of the demo-scene.

We think that having fun is much more important than stupid warfares
between groups, systems, parties, people ...
We don't like the arrogant attitude some groups and organizers of other
parties exhibit towards other people, groups, systems, ...

So our party will differ in that !

There are some rumours about the SILIconvention being a "commercial" party,
this is not the case. Of course we have sponsors (all other partys we know
of have sponsors) because without them it wouldn't be possible to keep the
entrance-fee as small as possible and have nice competition-prizes as well.

But there will be NO sales on the SILIconvention !
It is not a sales exhibition but a demo-party where people from all systems
may have fun together.

All of our sponsors are only providing equipment for the party, or prizes
for the competitions. So we have excellent prizes,as you can see in the
```

list below.
Our prizes will fit the competitions, so there won't be any PC-group
winning an Amiga turbo-card and no Amiga-crew will win software for the PC.
We have either prizes that fit the system, or things everyone
can use (for example video-game-consoles).

Some people wonder why they haven't heard of the main-organizers, the reason
for this may be that we are from the Acorn and Atari Falcon scene , if you
are involved in one of these scenes you know us , otherwise you probably
don't.
But we are not unexperienced in organizing parties (the list at the top is
not exaggerated) since we organized many parties and took part in much more,
so we know what we are doing.

And we have well known organizers from all systems, so you can be sure
no system will be neglected.

As you can see, we are keeping the promises other parties make (and made) !

Who?
---

The Organizers are: ADM (Atari)
Arsenic (Amiga)
Blank (PC)
Complex (PC)
Fairlight (C64)
Icebird (Acorn)
Inter (Atari)
Plush (C64)
Talent (C64)
TSCC (Atari)

Where?
---

Gemeinschaftszentrum Obervieland
Alfred-Faust-Str.4
28277 Bremen // Germany

Check out the best partyplace you've ever been to. How about a big building
complex with showers, kitchens, lots of party halls and rooms and a nice
presentation hall with the greatest video beam and brainblasting sound
equipment ? Nice,isnt it ?!

There also is a seperate disco-room on the partyplace. There will be a
great RAVE-Act and SID-Act during the SILIconvention'97! No entrance fee
will be charged from party guests. Have a nice Rave?!

When / Timetable:
---

...during Easter 1997...

Friday 03-28-1997 12:00 CET official opening
20:00 C64-music disco

Saturday 03-29-1997 18:00 competitions part 1
22:00 RAVER's Night:
-1 hour Liveact (Techno / House)
-10 hours Rave with 2 DJ's

Sunday 03-30-1997 17:00 competitions part 2

Monday 03-31-1997 09:00 prize-winning ceremony for the
competitions
12:00 CET official ending

What do you need?
---

All you need is a computer(including Monitor), a warm sleeping bag,
extension leads with multiple sockets(!) and 30 DM entry.
If you wanna save money, then reserve your coming until March 20th 1997:
transfer 20 DM (for each person) to:

Bank : SPARKASSE Bremen (Germany)
Account number : 1247 0308
Bank code number : 290 501 01

DONT FORGET TO STATE YOUR FULL NAME ON THE TRANSFER FORM!!!

IF you have problems or questions dial this number:
+0049-421-8498236. From 19:00 to 23:00 (CET).

What can you expect?
---

-Room for 2000 people
-Quiet, seperate halls for sleeping
-Extremely powerful PA equipment
-Competitions presented with 2 videobeamers, we have
3 videobeamers on the party
-RAVER's NIGHT: 10 hours RAVE with 2 DJ's and one hour liveact in our
seperate disco (entry free for party visitors)
-C64-Tune disco
-Internet terminals with 24h access
-A room full of brainblasting videogame-consoles like N64,PSX,Saturn..
where you can play the latest games..
-Pizza-Service (in the evening)
-We will offer fair prices for food and drinks. You can also bring your
own food to the party.
-Discount shops, about 200m from the partyplace, McDonalds 1.5km
-A big easterfire next to the partyplace
-Party T-Shirt's. The best T-Shirt printing techniques you've ever seen.
The shirts will glow in the dark !

Prizes you may expect:
---

-9 Nintendo 64 game consoles
-State of the art PC system
-200 computer magazines with CD's (bestseller games series)
-SuperCPU (c64)
-Swift Link RS232 (c64)
-Jiffy DOS (c64)
-Modem
-Risc PC hardware
-A digital video camera in a special competition.
-PC games and software
-OS/2 Stuff
-Videos,CDs
-Jackets,t-shirts,rucksacks,mousepads...
-.....

..and many more prizes we are currently negotiating about.

How to reach the SILIconvention'97?!
---

by car: Drive to Bremen using the highway and exit at
"Bremen - Brinkum". Then follow the signs that will show
you the way to the SILIconvention'97. Should you have
trouble finding the partyplace, just call this number:
8498329.

by train: Get off at "Bremen Hbf" (main station) and take the tram
number 1 direction "Arsten" , exit at "Kattenturm - MITTE"
and follow the signs... Should you arrive after 23:15
or have troubles to find your way, call this number:
8498329.

by plane: After reaching the Airport Bremen call this number:
8498329.
Please state the number of people who arrived - thanx!

Competitions and Rules?
---

The main attraction will be the competitions. Anybody may take part with
graphics, musics or programing. The entries will be shown on two
videobeamers in a big presentation hall. The best ones will win prizes.

ACORN Demo Competition:
-configurations: RiscPC SA200, 16MB, 2MB VRAM, Risc OS 3.7
-changes of display freqencies (HSYNC/VSYNC) are not allowed
-the definitions of all screen resolutions used in the demo must be
included in the form of an extra information file.
-own musik has to be included
-no interaction (like mousebuttons/keys to be pressed to continue,etc.)
-maximum size of the demo: 8 MB on disc
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

AMIGA Demo Competition:
-configuration: Amiga 1200 Blizzard CPU 1230, 50 Mhz, 8 MB Fast
-maximum size of the demo: 8 MB on disc
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

ATARI Falcon Demo Competition:
-configuration: standard ATARI Falcon030, 4 MB RAM, RGB
-maximum size of the demo: 8 MB on disc
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

C64 Demo Competition:
-configuration: standard C64 I or II with Action Replay V
-maximum size of the demo: 2 disksides (1541)
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

PC Demo Competition:
-configuration: Pentium 133, 16 MB RAM, GUS or SB Pro
-(minumum configuration 486 DX 4/100, 8 MB RAM, GUS or SB Pro)
-maximum size of the demo: 8 MB on disc
-playing time: max. 15 minutes
-deadline: sunday, 03-30-1997, 08:00

ACORN 64Ktro Competition:
For detailed info see Acorn Demo Competition
-one file max. 64k = 65536 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

AMIGA 40Ktro Competition:
-configuration: Amiga 1200 Blizzard CPU 1230, 50 Mhz, 8 MB Fast
-one file max. 40k = 40960 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

ATARI Falcon 96Ktro Competition:
-configuration: standard ATARI Falcon030, 4 MB RAM, RGB
-one file max. 96k = 98304 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

PC 64Ktro Competition:
-configuration: Pentium 133, 16 MB RAM, GUS or SB Pro
-(minumum configuration 486 DX 4/100, 8 MB RAM, GUS or SB Pro)
-one file max. 64k = 65536 bytes
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 08:00

Coding Competition:
-code the best effect in 4 Kb
-all systems allowed
-maximum filesize = 4096 bytes

-playing time: max. 5 minutes
-deadline: sunday, 03-30-1997, 08:00

Graphics Competition:
-picture should be completely hand pixeled. Retouching is allowed
-800x600 pixel max.
-max. 24 Bit
-use general filetypes
-deadline: saturday, 03-29-1997, 09:00

Render Competition:
-picture should be completely rendered. Retouching is allowed
-800x600 pixel max.
-max. 24 Bit
-use general filetypes
-deadline: saturday, 03-29-1997, 09:00

C64 Graphics Competition:
-picture should be completely hand pixeled
-picture must be executable
-scrolling is not allowed
-no music
-deadline: saturday, 03-29-1997, 09:00

4 Channel Protracker Competition:
-player: Protracker V2.3 (Amiga)
-maximum filesize 1.44 MB
-playing time: max. 4 minutes
-deadline: saturday, 03-29-1997, 09:00

Multichannel Music Competition:
-player: Cubic Player (PC)
-maximum filesize 1.44 MB
-playing time: max. 4 minutes
-deadline: saturday, 03-29-1997, 09:00

C64 Music Competition:
-choose between new SID and old SID
-music must be executable
-graphics and other effects will not be shown
-playing time: max. 4 minutes
-deadline: saturday, 03-29-1997, 09:00

Wild Competition:
-description: anything that does not fit into the other categories.
theme: all about computers.
-playing time: max. 10 minutes
-deadline: saturday, 03-29-1997, 11:00

Fake Demo Competition:
-description: produce the worst demo
-all systems
-maximum size of the demos: 2 MB

-playing time: max. 5 minutes
-deadline: saturday, 03-29-1997, 11:00

Netwave-Internet Game Competition:
-description: code an internet game
-must be working on Netscape or Microsoft-browser
-the rights of every entry will go to Netwave
-prize: a state of the art PC-system
-deadline: sunday, 03-30-1997, 11:00

Lariviere-Homepage-Design Competition:
-description: design the new homepages for the company Lariviere
-Please ask for further details of the requirements per email!
-use the text-contents of the old homepage
-use product-photos, ask for them
-maximum resolution mode: 800 x 600
-must be running with Netscape- and Mircosoft-browsers
-maximum size of the whole homepage: 1 MB
-Java or Animated-Gifs are allowed
-the homepage-design must look seriously (no freak-design)
-Lariviere gets the rights on each entry after the competiton
-Info: Get more info and support:
Email : lariviere@is-bremen.de
Homepage: http://www.lariviere.de
-Prize: Win a digital camera!
-Vote: The Competition will be voted by Lariviere.
-deadline: Sunday, 03-30-1997, 11:00

Surprise Competition:
-desciption: surprise, surprise!
-rules will be announced on the party
-deadline: sunday, 03-30-1997, 11:00

General Rules
-no pornographic or racial discriminating stuff will be accepted
-the playing time may be shortened
-we preserve the rights necessary to publish all entries
(for example on CD-Rom).

Many competitions - lots of prices. Our sponsors will donate lots of
prices and money for this party. Be sure!

Please note this:
---

- Smoking is generally allowed. In some rooms, smoking is absolutely
forbidden (for example in sleeping rooms).

- Drinking of alcohol is allowed. If somebody causes trouble he will be
kicked out.

- Please don't park your car in front of the entrance door or emergency
escape doors.

## 4135. Atari 520ST w- monitor

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: Jorge Barrios Sanchez <sjbarrio@hamlet.uncg.edu>
Message-ID: <Pine.GSO.3.93.970228153559.23535A-100000@hamlet.uncg.edu>
Source record: 126743

HI all!

I have an Atari 520 ST and a monitor with cables but no software for sale.
I will sell both for $150 obo + shipping COD.
Please reply via e-mail if intersted.

Thanks

Veej

# 4136. Atari ST FTP site list

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <331724fa2f99d1@sn.no>
Source record: 126744
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Here's this months update to the FTP site list.
As you'll probably notice, this list is a lot smaller than the previous ones. I'm happy to say that it's *not* because sites having closed down or anything, but because I've chosen to omit the "How to use FTP" part from this update and onwards.

Most of you already know how to get hold of files via FTP, either by using FTP/ncFTP etc. or WWW. For those of you who don't know (or would like to learn more about it) you can still get hold of this documentation as a separate file. It's available from my Atari section web pages, or directly at:

ftp://ftp.sn.no/user/hallvart/atari/info/ftp_info.txt (16 Kbytes)

(which incidently is in the same directory as the FTP site list)

There's one change to the list this time- a new site, from Karl Samyn of Belgium: ftp://193.190.205.13/archive/atari/

Hallvard

MIRROR SITES
---
FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS
---
Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any

message (and with a certain amount of errors no response to your requests
will be given at all).

>the text appeared on the screen!! Why do normal addresses, ie.
>
>http://www.brocku.ca
>
>not work????? I know that once in a while RESOLVING HOST should take

This MUST be in your Domain Name Server settings. In default.cfg, have you set the variable "NAMESERVER" to the NUMERIC address of your provider's domain name server? (so not ns.whatever.com but xxx.xxx.xxx.xx) I can't imagine anything else being the problem. Unless other STiK programs ARE able to resolve hostnames (like Finger, MG-FTP or AtarIRC), then you seem to have discovered a new bug in CAB.

Good luck,

Maurits.

Source record: 126747

>Also I have tried to go to the ASH web pages, but CAB refuses to show
>this page because there is no title !!!!! a pity !!!!!

Actually this is not quite the case. If you get an empty Window with the
"bad smiley" saying "<title></title> missing", you have received an empty
document, which, according to CAB, is perfect html-code except for the fact
it doesn't have a title :)

So compare this with the "document contains no data"-message from Nutscrape
(which I've seen much more than the CAB-phenomenon actually) :)
The fact that you receive an empty document could be a bug in CAB as well as
in STiK.

Cya,

Maurits.

Source record: 126748

>This message from postmaster@bassment.demon.nl to All came in on a wing and a
>prayer...

Wow... this Internet is really amazing... :)

>You don't say which host adaptor you're using, if it's one with a DMA through
>port then you could try swapping the order of the devices round, ie
>DMA-Host-SLM controller or DMA-SLM controller-Host.

Well, I use it together with a Megafile. Swapping them gives a scary result:
If the megafile is in the thruport of the controller, it doesn't work
anymore. If the controller is in the thruport of the megafile, only the
printer doesn't work. This, together with the fact that the Calamus driver
doesn't work points to the scary conclusion that the controller is indeed
busted (or the cable is).

>If you've tried all the above, then I'd check the cable between the
>controller and the printer for open circuit wires (the handbook has the
>pinouts BTW).

I guess that's all that's left.. :(
Thanks for your help!

Maurits.

> buy a SCSII 2 cable from Maplins. And hey presto!!

1)I think that the ZIP drive are stuck with either 6 or 7 as a SCSI id.
2)I've heard (perhaps whomever pointed it out could butt in here and explain again) that you may need to hook up a seperate wire for termination power - but that may have only been for those using the Link, and you have a Falcon.
3)give it a shot, what the eh, you can always return it, or spend the extra and get the EZ230

> I think I am going to get a zip drive, EZ135's are no longer produced,
> and I don't want to go to the expense of a EZ230 :(

you might be able to get an EZ135 2nd hand? I know your dilemma though.
I want to get a SyJet (1.5 GB) and like the EZ230 versus the Zip, it is slightly more money than the Iomega Jaz. but When you compare cost per MB,
Syquests are much less expensive, but the price
you pay at the gate sometimes counts for more. *sigh*

"Jakob" <jnass@metronet.de> writes:
>How can I create an TOS-Imagefile from my old ATARI ST? TOS 1.2!

You need a program like the following (the addresses are for tos 2.06; you
need to change them for older versions, I can't remember what to):

```
/* sucktos.c - program to save copy of atari ROM to disc */

#include <stdio.h>

int main( void ) ;

int main( void )
{
char *p ;
FILE *f ;

f = fopen( "tos.img", "wb" ) ;

for( p = (char *)0xE00000; p < (char *)0xE40000; p++ )
fputc( *p, f ) ;

fclose( f ) ;

return 0 ;
}
```

Hello Atari ST enthusiasts!

I have the following Atari ST hardware for sale. All of
these are in good condition, most with original boxes. Prices are as
marked (+ shipping), but I'll negotiate for large orders. I would
prefer to sell these locally, i.e. Sacramento or S.F. bay area, but it
will be first come, first serve.
Email me at pope@rrwilson.ucdavis.edu with your order!

> Presumably he must have some details about the format to decode it ;)

I have a program (from Electronic Images) that simply takes a bunch of SPC or SPU spectrum images, loads them all in memory, and concatinates them all together for the SPX file... Using Photochrome or speed of light, you can take any GIF image, and split it up into multiple 320x200 spectrum pictures, and make your own SPX!

I highly doubt that ANY emulator could run those at least half-ass!
They make so many undocumented hardware calls, time the video inturrupts
so accurately its not funny.. Remember that the whole point of those
demos was to show the processing power in the ST, and they used EVERY
bit of processor power (including any coprocessors) they could utilize!!

Interesting, as there is about 5-6mb of undelivered mail on one of the
drives. I might look into this once the matter is over to see what wee
can do.

>I've downloaded Thing v1.00 and v1.09 but neither is in English. I take
>it you're all either living with German menus or you're using v0.59?

Nope. I've certainly got the English version 1.09!
I can't remember where I got it from, but from the "help" file it says the
following:

---
The following FTP Servers hold the latest archives:

1) ftp.uni-kl.de im Verzeichnis /pub/atari/shell
2) ftp.uni-oldenburg.de im Verzeichnis /pub/atari/desktop

Independent of the source of supply the archivess always have the
following names:

THINxxxD.LZH ... German version x.xx
THINxxxE.LZH ... English version x.xx
---

Good luck!

Hallvard

# 4153. Farewell Atarians

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: Alexander Pope <app@pope.demon.co.uk>
Message-ID: <331624A0.1965@pope.demon.co.uk>
Source record: 126787

Hi,

Merlin is sad to say that we are leaving the Atari PD scene
from this Friday (Feb.28th).

We would like to thank everyone for their support and
enthusiasm which has kept us going for the past 5 years but
all good things must come to an end. Unfortunately it has
become unviable to continue this side of the business with
the new avenues that we are pursuing.

As a result of closing down we have many items to offer for
sale with all prices excluding carriage.

STFM 1 meg (with tracker ball) £75.00
External disk drive £25.00
100 meg HD wth loads of PD programs on it £100.00
800 PD disks including boxes £200.00
Falcon 4 meg no internal HD £300.00
Wide selection of commercial games
(no boxes or manuals) original disks - £50.00
Complete set POV demo disks (140 approx) £30.00
500+ PD disks £120.00
SCSI connector cable £30.00
7 Black Box games (Obsession & Substation) £15.00 each
Complete STOS code to Dave Cobbledick's games £25.00
ESLA football manager type games 1 meg only £5.00 each
1 Killing Impact (Falcon only) £15.00
6 Pong (Falcon only Ping type game) £5.00 each
9 Plonker 1 meg only £2.00 each
Parasol Stars (boxed & shrink wrapped) £17.00
2 Joystick extenders £5.00 each
23 single disk boxes £10.00
2 40 disk disk boxes (very robust) £3.50 each
Falcon mini SCSI cable £10.00

All prices are based on a near offer basis (ono) and
exclude carriage.

e-mail us at st@pope.demon.co.uk
or snail mail us at:
Norwich House, Bisley, Stroud, Glos. GL6 7AA
Tel: +44 (0)1452 770133 Fax: +44(0)452 770872

We are sorry to be leaving such a friendly group and sadly
say goodbye to all our customers and friends we have made.

All the best.

Phineas and Alison

# 4156. DLLs for Atari?

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: gmiller@inca.co.nz
Message-ID: <21c7cd$f362d.10@HERMES>
Source record: 126790
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.ech,comp.sys.atari.programmer

Has anyone ever seen any DLLs for the Atari?

Or know of any programs that use them?

I have been working on a TSR that allows the loading of modules and "DLL"
like extensions or plug-ins. It will be released later this year, and will
be freely distributable (within reason).

(More details will be forthcoming - I am still debugging the Load/Free
funcs, as well as make it somewhat more "intelligent")

# 4157. Wild & Wacky Atari Auction (Update #5)

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970228043900.XAA22943@ladder02.news.aol.com>
Source record: 126791

Wild & Wacky Atari Auction (Update #5)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
Everything has been tested except the Intv carts.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 8th.

One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

# 4160. Atari Works and Speedo

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <857100470@acpu.com>
Source record: 126794

CJ439@FREENET.CARLETON.CA (Robert Wills) danced the two-step and said:
|After years of craving it, I picked up Atari Works and Speedo GDOS
|ver.4.x? AW looks fine, but I can't print anything. I just get
|gobbledegook ASCII, along with pitiful beeps. I'm using a MegaSTe
|TOS 2.05, Canon BJ5 in Epson LQ emulation. I vaguely remembered
something
|about Speedo clashing with Warp 9, so I disabled W9. Still no go. In
fact,
|it locks up so completely, that a CTRL-ALT-DEL warm boot won't work!
|Any ideas?
Actually, I think Speedo 4.1 works with W9, but I have disabled
(using the W9.dat file) screen acceleration for most (or all) programs
that use Speedo, so I could be wrong. This is my Warp 9.dat file:
W935
RECIPE.PRG A0 B0 J0
M_READER.PRG B0 J0
MARCEL.PRG A0 B0 J0
WORKS.PRG A0
DCAD3TTF.PRG B0 J0
EZ_MONEY.PRG A0 B0 J0
PRISMPNT.PRG B0 J0
TOUCHUP.PRG B0 J0
DB3.PRG B0 J0
PAINT.PRG B0 J0
LANDMINE.PRG B0 J0
The A0 kills off the screen acceleration for the specified program.
That lockup sounds like your Speedo caches are too small. Try running
drivers.app and outline.app, and messing around with the cache sizes
(I really don't remember what I did, but reading the manual helped me
(surprise!).

Neil Martin told us all:
|LDW power falls over on the tt (in all resolutions).
|I've been looking for LDW power 2 to see if it will solve the problem,
but
|so far to no avail.
Hmm... this doesn't agree with my experience. I received a
copy of LDW Power with the first TT that I bought. Seemed to work fine
in TT Med, including the demos; it says that it is v1.03.

# 4162. Please help with STik/Cab

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: rszermin@freenet.npiec.on.ca
Message-ID: <5f5qv1$aaf@brain.npiec.on.ca>
Source record: 126796

I am hoping someone can help me getting stik/cab to work on my ATARI ST.

I downloaded the www130 pack from micros.hensa hoping to get a slip connection. I am able to get the Stik software to work fine (ie. it dials, logs on, finds the IP address that is assigned. (I know this because it displays it in the box, the software says "Connected" and the window closes). Then, when I go into cab, it says "Resolving host" when I try to go to some local addresses and just sits there (every few seconds the RecieveData and SendData lights flash on my modem). I read all the documentation and I am quite confident that the software is configured with the right DNS. The server after I enter SLIP (using a terminal prg like STalker) says:

Annex address is 139.57.65.9. Your address is 139.57.65.1xx

where xx varies. In the configuration for Stik the annex address is entered in the correct line, and the ASSIGNED address, I know it finds it properly because it displays it upon connection (Stik that is). In cab, when I tried to type in a numerical address such as:

http://204.192.121.205

(its the only one I know) it **** did ***** manage to go there. ie. the text appeared on the screen!! Why do normal addresses, ie.

http://www.brocku.ca

not work????? I know that once in a while RESOLVING HOST should take more than 30sec., but generally it is rather quick (under 10 sec.), right?

Initially I was using the Cab 1.1x that came with the WWW130 package, but then I downloaded the latest Cab 1.5 and STik 1.12 thinking some bugs may have been fixed. I get the same thing. My CAB.OVL file (from the origingal WWW130 archive of course resides in the same directory as CAB.APP and again was updated to 1.21). I am running a 1040STe with 4Mb ram and mono or color set up. I have a GVC 14.4 Fax/Modem and a 44Mb HardDrive. Again, the problem is it just sits there saying RESOLVING HOST with the modem lights flashing every 5 sec. or so. I am running nothing else (other than Stik, a replacement file selector, SerialFix 2.00).

P.S. Slip connections work just fine for my friends who have PC's on this server (which is called ANNEX, it is a University server for the university I attend: Brock University in Canada). They run Netscape and it works fine.

Can anyone help me?

Just thought it needed saying. ST Format was known as 'Saint Format' among many of my friends for the obvious anti-piracy stance in the mag and then all the contact ads at the back. Gave us all a laugh and destroyed any credibility the anti-piracy editorial may have had.

It's dead already. Some life could be breathed back if TOS was distributable
freely. But that would make sense, and Atari were never known for that.

<snip>
with CAB on www.dejanews.com?

Hi Kemosabe,

There is nothing wrong with CAB connecting with DejaNews. I've been using it for about a year as my servers NG link is poor, to say the least.

DejaNews is one of the most amazing connections on the Net. Here is the best way I've found to connect without problems:

http://www.dejanews.com/forms/dnq.html (Hotlist it!) It's called Power Search. As an example type in the search box [ comp.sys.atari.st ]
Change the following settings:

Number of matches (100)
Sort by per page (Date)
Articles date weight (Great)

You'll get everything posted to this NG. If you want to find an individual's posts, just type in there name or e-mail address in the search box and change the (Date) setting to (Author). Bingo...
There are many other features to numerous to mention. Just try them out. You'll learn something new all the time.

To paraphrase a famous song, "Every move you make, every post you place, DejaNews is recording you!"

Something to keep in mind before you post a bawdy flame...

Charles

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Salut,
I have just been given a 1040STe and I would like to know which jumpers I must enable/disable to put TOS 2.06 (32 pins Eprom chips) instead of TOS 1.4 (28 pins ROM chips); can anyone help me ?
Why TOS 2.06 ? because my other ST has TOS 2.06 and the disks are formatted for that TOS AND it has a much nicer desktop.

Thank you for your help.

And I just got the news that ASH has bought the rights for CAB 2 as well.
:-((((

I still hope that we will be able to get hold a swedish version as we have
done so far (support has been excellent), but seeing how it has gone with
MagiC (which doesn't even excist in swedish) I realy doubt it.
I guess we will have to stick with german update for CAB 2 as well in the
future. :-(((

Maybe CAB 2 will come for the PC as well? looks like most ASH software
is heading against the PC market these days.

I don't blame that author of CAB, but if ASH (or maybe it's System Solution
we should blame) doesn't treat CAB better than MagiC I will go for
WebSpace (if any).

## 4175. DLLs for Atari?

Newsgroup: comp.sys.atari.st
Date: 1997-02-28 00:00:00 UTC
From: gmiller@inca.co.nz
Message-ID: <317cd$017f.152@HERMES>
Source record: 126809
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

Has anyone ever seen any DLLs for the Atari?

Or know of any programs that use them?

I have been working on a TSR that allows the loading of modules and "DLL"
like extensions or plug-ins. It will be released later this year, and will
be freely distributable (within reason).

(More details will be forthcoming - I am still debugging the Load/Free
funcs, as well as make it somewhat more "intelligent")

I can understand this and to an extent agree. I have known people with loads of pirate games. They never played them, most were crap and I certainly don't think they would have bought them in any case. I have gone out and bought several games after playing a pirate version and thinking it was dead cool, so in my case it has helped the good developers, which were in the minority unfortunately.

>So, don't tar us all with the same pre-feathered brush, please :)

Awe, come on. What success the ST did have was almost entirely based on piracy of games, with the exception of use in the music industry and a few other small niches. Not only that, but the old magazines were an absolute breeding ground for it with the contacts pages.

Now tell me, you reckon that all this helped kill off the ST right? Some much was being copied that the publishers couldn't make good money out of the platform and so abandoned it. No way. If you take 2 ST users, Mr. Straight who never had a copy of anything and owned all original software, and Mr. Blackbeard who had a large copied collection, I'll tell you that old Blackbeard would have on average spent much more money in the ST industry than Mr. Straight, on both hardware and software. We are not talking about large scale pirates here who sell copies of games as originals on market stalls and the like. 95+% of piracy is done by friends handing the stuff round.

If you think that copied software is doing the publishers out of a lot of money, I think you are mistaken. Granted some people would have purchased some software that they instead copied. However, many people, if they thought a game was good (after they'd copy it), they would often buy the same game, and others from the same company. It was poor software that did most damage to the gaming software industry in the 80's. That's why Nintendo cleaned up on the game industry in the late 80's, it provided quality software.

Game copying was just a prelude to all the cover disk junk you get now (which is just a reaction by the publishers to cut down on piracy). It showed you how good the game was (or more usually how bad) and if the publisher wrote games

that were worth buying. Without priacy of software the ST would have been nowhere near as successful as it was. Gamers would have bought too many bad games and so would have stopped buying them altogether.

My line is this: free the software up, let the ST live on emulated, don't let it die a second death.

Jamie

Does anyone use the program X-Change from The ST Club? Is it any good? I need to convert some Postscript files (%!PS-Adobe-2.0 EPSF-1.2 to be precise) to some Atari format (CVG, GEM, etc.) but if there is another program with more functions I might consider it.

You must have an RF(sp) adapter(same type as for the Atari 2600 or Atari Jaguar) and plug it into your 'antenna' input on your TV. Or alternatively you could get the monitor master which enables you to plug into the audio in jack of your TV.

Hope that helps.
Curtis

I believe the authors of the 'Alternate Reality' games have give
permission to distribute their games. Someone may want to check the
Alternate Reality homepages to check on this. I know they have the Atari
800 and PC versions of the games posted on the sites.

Hi Martin,

you can't upgrade an ST computer only with sim modules.

(Of course it is possibly if you like soldering a lot of wires)

A very easy way to expand the memory is using the MAGNUM ST
memory expansion board.
The Magnum breaks down the 4MB limit.
You can use ps/2 sims and have only to sold on _one_ wire.
You need a socket on you cpu.

I've been using an EZ135 drive since December, and can highly
recommend it for anyone who wants some sort of removable backup - so
have a number of my fellow TAF members. One of the nice things about it
is that it has standard SCSI connectors (not those propriety connectors
found on the ZIP and JAZ that require special cables) - that was VERY
important to me. As for support, Syquest is well known for their
support of their older drives - and as for cartridges, at least two
companies make generic cartridges, which can be picked up at any Mac
dealer. They now make a replacement drive, the EZ Flyer, that's 230
megs and will also take the 135 cartridges.

>on the NEC monitor).

The 2V can handle quite a few different rezzes (I'm typing this in front of a NEC Multisync II and the 2V is a little more versatile). You need a VGA adapter block for the Falcon - I imagine it probably costs about $15 retail. Toad Computers (emal info@toad.net) or Computer Direct (email info@compdirect.com) will likely have one in stock and can ship just about any way you like. You can build one yourself, of course, but my time is worth at least $20/hour (according to my agency - I happen to know that Intel is paying $32.50/hour for me, though <G> ) and it will take at least 2 hours to gather all the parts and make the assembly...

>I'll probably have some more Falcon-related questions coming up!

Bring 'em on - my Falcon should be arriving no later than Thursday ("Real Soon Now" was getting old so I paid for the shipping myself) and I'll be able to provide some hands-on answers.

Software emulator? With TOS 2.06 or Magic, yes, but not otherwise. No other ST emulator needs a pointless hardware card to use TOS ROMs; choosing to concentrate on the least accessible of all the emulators seems odd to me.

[snip list of sites to go to]

Why no mention of Pacifist? It's far better than Gemulator from what I've seen.

> This chapter features a list - as complete as we could make it - of various
>programs that *do* work on the GEMulator.

I've had most of the ones mentioned there work fine on Pacifist too; I can not say 100% of those listed work because I don't have all those programs. But none of the ones I tried failed.

> END OF FILE RECOGNITION
>
> Q: In "GfA Basic", the EOF(#x) command doesn't find the end of a file.

This may be a TOS version problem; I remember I had some GfA BASIC code that relied on EOF detection and it failed on a friend's TOS 1.4 machine but was fine on my 1.2 machine. Pretty sure GfA brought out a slight update and the problem didn't occur from then on; however, this was GfA 2.x not version 3.

> Q: Can joysticks be emulated?
> A: ?

A: Yes, they can. Pacifist does it, though it doesn't work with all programs.

>Predictably, due to the direct access on addresses FFFF8604 and FFFF8606,
>this doesn't work on the GEMulator. How can this be solved?
> A: ?

Get Pacifist which seems to be emulating the FDC quite well (though not by using the PC's drive, but by using virtual disk images). Presumably these are always write-enabled, I haven't checked.

>- Floppy: media change is seldom recognized. I have to reboot when changing
>floppies.
> A: ?

Something real STs often have problems with because of a bug in TOS as I recall; however Gemulator is much worse in this area - makes you wonder if they are bothering to check if the disk is changed at all.

> MS-DOS VS. ATARI-FORMAT DISKS
>
> Q: I cannot read all Atari disks on the PC.

>compatible with PCs, MS-DOS and Windows require very specific values to be
>present in a disk's bootsector.

They do? Most of my ST disks that can be read at all show up files OK when looked at, and have a variety of strange bootsectors. I find most problems are due to disks simply being unreadable full stop; you can check this in most cases by trying to make a disk image with the IMGBUILD program that comes with Pacifist. If it fails to read a disk, you'll need to make another copy using a real ST. I've only had one disk show up a directory full of rubbish characters, and to be honest I forget if it actually had a file structure on it or not.

> Together with GEMulator you should get a
>program by the name of MOSDOS.PRG. This Atari program will transform Atari-
>formatted disks into ones that MS-DOS and Windows can read. Do note that
>this does not work with non-standard Atari format (such as 10 sectors per
>track 'FAT' disks, hyper-formatted disks, etc.).

IMGBUILD with Pacifist is quite happy with 10 sector, 11 sector, 81-83 track disks and so on.

> A: ?

Probably didn't get a form feed at the end. Some printer drivers have an option to add a form feed at the end of a job. Otherwise, try printing an empty page from another program afterwards.

Nice FAQ otherwise, keep up the good work.

And, totally off-topic, but I have to ask... presuming Ultimate Virus Killer is a descendant of AVK... when did it move on from being 'A' Virus Killer to being the 'Ultimate' Virus Killer? :-)

I can tell you *exactly* how many methods that will get past: 0.
MSA merely copies the disk to a file. Any protected sectors don't get read. And
then the game won't work.

> A much
>bigger problem is games with 'manual' protection and manuals in

Ask for permision for the manuals too. No big problem I would have thought;
even if you can't get the original documents from the publishers someone will
have an original that can be scanned in and looking up a scanned page image (or
OCRed page) at the appropriate time on a multi-tasking PC won't be a problem.

[snip off-topic stuff]

I can't see any data loss being caused if only used on an emulator; even on a real ST how is a single floppy game going to cause problems? As for viruses, there are virus checkers. A virus, however, is the least likely problem to rear its head. Pirates don't like risking software collections and are usually the most virus-aware people about.

> In agreeing they could
>also be accused of condoning the use of pirated stuff. It's a bit of a

Yeah... I'll have to find some friendly author to have a chat about this and see what he thinks before talking to authors and maybe getting bad results.

## 4198. Falcon IDE drive speed

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: dest@freenet.edmonton.ab.ca
Message-ID: <5fae5u$c8q$1@news.sas.ab.ca>
Source record: 126632

I just reformatted my Falcon hard drive (Quantum GLS85). When it was empty, ICD's RateHD gave rates up to 1063 K/s at 19ms. After copying back all the files, RateHD reports about 150 K/s at 17ms.

Is this normal? Do all IDE drives slow down as they fill up?

hmm pretty easy :)
just get shellbuffer, file might be called SHBUF8
If you can't find it, tell me I'll see what I can do.
But I think it shoudl be found on several ftp sites.

I have the MagiC Mac 2 demo and will try this out. Printing from the Mac
serial port works fine to the Stylus as it has a serial and parallel
interface.
I have Powerprint, but it is to slow. Calamus SL also works fine under
MagiC Mac
for printing from the serial port on the Mac. Pretty fast.

Thank you,

Mike

# 4202. Thank you all RE:FS Atari and Falcon items

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <3318ACE8.4896@owens.ridgecrest.ca.us>
Source record: 126636

A quick thank you to those that purchased items from me. It's really nice to have things go smoothly. Everyone seems happy with their purchases, and as always, if not, send it back for a refund.(same condition of course and within a reasonable amout of time).

For those that bawked on sending the payment for the items you requested, don't bother to reply to the next Atari sale coming up. You guys really missed some good deals. I didn't have to sell the stuff, I don't need the cash, just though I would get it out to ones who could use it.

Thanks again,

Mike Grove

>otherwise only a single process would ever use them at a time anyway.

Yes, but I don't think you should look at the above as shared libraries
in the normal sense. DLL, after all, stands for Demand Loaded Library.
That is, a library that is only loaded when it's needed. It doesn't
necessarily have to be sharable by definition.

IMO this would be a generalized way of dealing with for example load/save
modules in image or word processing programs.
If it's released soon enough, I'll definitely consider using it for the
module system that will go into the next version of MGIF. Otherwise I'd
have to write something similar myself.

>Of course there are benefits of being able to fix bugs without re-linking
>the executable.

Perhaps, but for that to be really useful your executable would, IMHO, need
to be partitioned into relatively small 'library chunks'.
It's after all not that often that serious bugs are found in the standard
libraries themselves.

Well, if you change the Canadian dollar signs for pounds, that's what
we pay in the UK (about 280 for an EZ230 and 500 for the SyJet).

Has anybody in the UK tried buying hardware from the US/Canada?

Jim

# 4211. connecting falcon scc port to st rs-232 via null modem cable

I'm wanting to connect my 1040sftm serial to the the LAN port on my Falcon (the modem port is already occupied by a modem).

Looking at the pinouts for the falcon lan socket, doesnt give me any clear idea on how to connect the two together.

Anyone know how I can do this?? Or if it is possible at all? I don't want to fry the serial chip on the falcon :)

Cheers,
Dave

# 4212. FS: Atari Computer Goods! More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5f8tva$lm8$1@kelly.teleport.com>
Source record: 126674
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, MonoChrome Monitors, Monitor Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials.

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

# 4213. How? Limit memory under MagiC Mac 1.2.5

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: mgrove@owens.ridgecrest.ca.us
Message-ID: <5f8mhd$jbj@ash.ridgecrest.ca.us>
Source record: 126675

I finally was able to obtain an application that
I have wanted since I had seen it advertised in
STart many years ago. I have been running Dynacadd
V2.04.06 under MagiC Mac with pretty good luck.
You can print out through the serial port direct
without problems. There is no driver for my Stylus
Color, but the Epson LQ driver gets a black and
white drawing out with good quality. Dosen't like
multasking mode. The main problem is that it hogs
all the ram, and dosen't release it upon exit. I
tried limitmem, but that didn't work. This version
of MagiC dosen't allow (or have) the limit memory
option in the install application drop down menu.
I tried loading a few apps before start Dynacadd
but that didn't make any difference.
Is there a way to limit the amout of ram it takes
upon start up?

Thanks

Mike

>one.

Too many problems with that, not least of which is an author may not
wish to be associated with code which _might_ cause damage of some
sort - data loss, virus etc due to the "crack". In agreeing they could
also be accused of condoning the use of pirated stuff. It's a bit of a
no go situation imo.

>Or how about cracking original copies ourselves - it isn't that
>difficult.

I thinking about that approach but working to it backwards. Naturally
you cannot expect anybody to remember the exact method used but being
given a general idea would help produce an executable without
introducing problems. And, hacking the code _after_ being given
permission would leave the author free from accusations and criticism.

>I was employed for a short while to remove protection from
>older games when they were rereleased as budget titles; I also had to
>use similar compression routines that pirates used in order to cut the
>number of disks in the re-release down (thereby keeping costs lower).
>Didn't get a jot of help from the game authors or the guy who
>originally put the protection on (even though it was him employing me
>:). I did change the odd cheat-code to get my revenge though... but
>that's another story.

So, basically to do this, you need to approach the publisher first,
then the author if the rights have reverted back?

>more than 30sec., but generally it is rather quick (under 10 sec.),
>right?

Yes, this is almost certainly a resolver problem. You need to look at the NAMESERVER variable again - it's value must be wrong. It should be a dotted decimal address like 158.152.1.58 (if there is more than one specified then only the first is used currently).

Incidentally, that is my DNS and I've heard it is possible (but haven't tried it) to use "3rd party" DNS servers so you might even be able to use the one above! Obviously, if it works you will want to use one nearer 'cos it'll be damn slow, and if it doesn't work then you are non the wiser. I'm just curious to know if it is possible.

>I'm looking for info on how to upgrade my 520ST to 1 meg Ram.

Best thing to do is locate one of those ram expansion kits that will accept simm modules. For what it costs, you might as well plug in the whole 4Mb then.

>Also, can the 360K atari formatted disks be accessed by a PC?

Put simply, the hardware is the same, the data organisation is the same but the firmware isn't (usually).

If you can find a way of convincing the PC to format to the old PC 360Kb standard then the ST will be able to read and write to it. You can format on the ST but you need to use a PC compatible formatting program which can modify the boot sector contents so the buggy PC code does not reject the disk.

Btw, the ST will make full use of a 720K drive if you fit one and the above still applies. Most old 720K PC drives can be made to fit - its just that the connectors tend to be in the wrong places but they are the same electrically.

> Shopper... :)

And for those who really don't want to fight the crowds of gamers getting their latest glossy paper fix at the newsstand, or for those who don't care to give themselves indigestion by accidentally glancing at the color scheme of Wired, you can read it on the web at:

http://www5.zdnet.com/cshopper/content/9703/cshp0049.html

Two observations about it. First, Mr. Dvorak gets the 520ST wrong, calling it a 560ST. Not too weird, except that he had just mentioned the 260ST and then names the 1040ST. Kind of a basic pattern recognition... Or it could just be a typo.

Second, he notes that Nolan Bushnell(!), "among others," are interested in getting the Atari name back. That opens up a whole new slew of "what if?" scenarios. Maybe if some sent a few kind, informative, and encouraging emails, and passed around a collections plate... Not that I'm looking for a saviour, but it might be interesting to find new supported Jag games and maybe even new TOS development. But of course I have not the slightest clue what he wants to do with the name. Could be used for a T-shirt to be worn by Chuck E. Cheese.

You can't print anything? Where are the beeps happening? It sounds to me like you are trying to print the file from the desktop. Firstly, use the BJ-10e printer driver for you BJ-5 (I use AW and Speedo 4.x with a 1040 STe, printing out to a BJ-5e, so I know it works), secondly, if you're not, print out from in Atari Works. In fact, from reading it again, I can see that you are printing out from in AW, but you're obviously using the wrong printer driver - switch to the BJ-10e driver. It works - I used it just tonight, so I know it works.
If it still won't work, send me email.

That's not true. If you use DD-Disks there's no Problem at all changing
disks between an Atari an PC. I'm doing that all the time especially with
midi-files and I haven't had any problems at all. The PC does read my old
Atari-disks without any problems. And my Atari does read my PC-disks as
well (of course they have to be DD-formated Disks cause I haven't got an
HD-Disk-Drive in my Atari). If you do use HD-Disks, just put something on
the small hole on the upper left of the HD-Disk - so it'll be recognized
as DD-Disk. Of course it still has to be formatted in DD-mode.

# 4223. Monitor for Falcon?

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: Robert Aries <robaries@ix.netcom.com>
Message-ID: <33182CE4.18F5@ix.netcom.com>
Source record: 126685

I just got my hands on a Falcon--a buddy of mine is letting me check it out as I might be able to use it in my music studio. Anyway, I have an NEC MultiSync 2V monitor that I use with my Mac. Will this monitor work with the Falcon? The connectors don't match but I can probably get some adapters to correct that. I know the Falcon can do VGA or SVGA...can multisync monitors handle this? (Unfortunately I lost the documentation on the NEC monitor).

I'll probably have some more Falcon-related questions coming up!

TX,

Rob Aries

## I: INITIAL PROCEEDINGS

---

### 1.0 WELCOME!

The GEMulator has been around for a while, yet all this time nobody ever got their noses down to the grindstone in order to create a means for GEMulator users to exchange hints and tips, in other words to conceive a basic document that contains information that GEMulator users would no doubt value like life itself. Well, this is it.
In case you are not familiar with the concept of FAQs, please read the next paragraph.

### 1.1 What the FAQ?!

FAQ simply stands for "Frequently Asked Question", but as of late it has come to indicate a text file full of information about a certain subject. And somewhere in the infinite nooks and crannies of the vastly obscure Internet you can find FAQs for just about anything at all: Sitcoms, rock groups, bomb-building, hallucinogenic substances, Amigas, Serbo-Croatian bonsai tree aficionados, you name it!

### 1.2 How and where to get updated FAQ versions

The idea for this FAQ came into existence somewhere around the end of 1996, at which instant its creators both started to collect the various messages pertaining to GEMulator that made their way onto the various Atari Usenet groups, most particularly onto the group they quite regularly frequent, comp.sys.atari.st.
There will also be more or less frequent updates of this document, of course, which will be posted to comp.sys.atari.st and comp.emulators.misc and put up on the Web at http://members.iglou.com/rsg0910/gemul8r.faq. If you want to receive the current version of the FAQ in your email box every time a new one is released, just email to cronos@worldaccess.com with the subject line "Subscribe GEMulator FAQ".
There are plans to create a GEMulator newsgroup, but so far nothing tangible has materialized.

1.3 How to help improving the FAQ

First of all, please distribute this FAQ to FTP sites, WWW sites, bulletin boards and whichever other places you deem fit. The word must get around so that this FAQ will quickly improve drastically. Right now it contains rather more questions than it does replies, which is a thing that must change.
Second, if you notice anything - anything AT ALL - that is either incorrect or incomplete, please feel free to fill in the gaps (possibly with source reference). Even typo reports are welcome. Most of all, however, we would appreciate your sending in solutions to the problems posed in this document, or submitting procedures that people would need to undertake to render compatible a program so far included in the 'no way' list. Also, we would simply like to know of programs you are using successfully that aren't yet mentioned in chapter 4 (ones that *do* work), or ones you've tried (and failed at) not yet mentioned in chapter 3 (ones that do not work).
Cheers!

1.4 Author information

1.4a Richard Karsmakers

A teacher of English since January 1997, some of you may recognise Richard from some things he's done on the Atari platform, which include the "Ultimate Virus Killer" and the disk magazine "ST News". Although he has in the mean time rounded off the latter, he has vouched to continue developing the former. This, together with his disinclination to convert hundreds of "Superbase" and "1st Word Plus" files to "Access" and "Word" respectively, is the main reason why he is now the owner of a GEMulator-equipped PC set-up.
He still writes for the "Maggie" disk magazine occasionally, and plans to set up a World Wide Web Multi Media Magazine called "WWW-MMM". Having a penchant for loud music, he also maintains the FAQ for the rock group Gwar.

1.4b Robert Goodwin

Robert has been using Atari systems ever since they came out, from the 2600, 400, 520 ST and up, since around the late 70s. When the GEMulator and other Atari emulators came around, he started playing with them to see how much compatibility they provided. So far, there's compatibility to some

extent with various emulators. Even though they're run on IBM clones, he still allocates space in his room for an STE and Mega STE, claiming they can never be replaced by any of the clones. He hopes emulators will improve as time goes by, featuring ever increasing compatibility.

1.5 GEMulator FAQ history

1.00 - 1 Mar 1997
- Compilation started

1.6 Thanks

Lots of thanks to the people on Usenet who have reacted positively to the idea of creating this FAQ - this one's for you! Quite a few people have reacted by submitting questions, sometimes even questions accompanied by an answer. Although we'll no doubt have forgotten a few people here, heartfelt 'cheers!' need to go out to Ben-John, William Jones, Ken MacDonald, Miguel Reizinho, Jeff Vincent and Mark Slagell.
Special thanks to Will Fisher; he's the author of "EmuZine", a Web HTML magazine for emulation in general. For further information about this magazine, you can email Will at blackat@direct.ca.

---

II: WHAT IS THE GEMULATOR?

---

2.0 The GEMulator

2.0.1 What it is

GEMulator96 is a software Atari ST emulator for PCs, created by Darek Mihocka of Emulators, Inc. It emulates most of the ST systems released by Atari, the 520/1040ST, STfm, STf, STm, MegaST and MegaSTE.
GEMulator Classic (current version 3.6) can only emulate the Atari ST. This product is freeware (yes, it's for free!) and works on MS-DOS, Windows 3.1, Windows 95 and OS/2 Warp, requiring at least an 80386 processor running at 33 Mhz, with 2-4 Mb of internal RAM.
GEMulator96 (currently version 4.6 of January 1997) costs US$ 69.95 separate, US$ 99.95 with MagiC 2, US$ 119.95 with MagiC 4, US$ 149.95 with TOS 1.04 ROMs on an ISA card, and US$ 179.95 with TOS 2.06 ROMs on an ISA card. Users of MagicPC (a competing product) can upgrade to GEMulator96 for US$ 39.95. It runs on Windows 3.1, Windows 95 and Windows NT, and requires at least an 80486 processor at 33 Mhz, with 6-8 Mb of internal RAM and a VGA monitor. It works on systems equipped with 386/486/Pentium/Pentrium Pro.
Emulators, Inc. also offer to send you the latest GEMulator with MagiC 4 if you send them your old ST or (Mega) STE with disk drive and at least one (monochrome or colour) monitor. They'll even pay the shipping of GEMulator to you, the kind souls :-\
GEMulator97 is in the pipeline for the summer of 1997; this one should also support Atari TT emulation.

2.0.2 Where to get it

Emulators Inc. can be reached via email at emulators@msn.com, which is also the address where additional questions about GEMulator may be asked. The regular (snailmail) address is:

Emulators, Inc.
14150 NE 20th Street, Suite 302
Bellevue, WA 98007
U.S.A.
Phone 206-236-0540
Fax 206-236-0257

2.1 Where do I find the software?

For GEMulator Classic and GEMulator96:
http://www.emulators.com (click on Downloads)

For software:
ftp.cnam.fr
ftp.archive.umich.edu (a very busy site!)
gopher.archive.umich.edu (preferred)

For the TOS ROMs:
http://www.nfinity.com/~swhalen/node99

For the virtual drives:
http://home1.swipnet.se/~w-11410/js/gem96dem.zip
(Just take the drives out of the zip file and stick them in your GEMulator directory)

For MagicPC: (German)
http://cip2.e-technik.uni-erlangen.de:8080/hyplan/lafreund/magicpc.html
ftp://members.aol.com/ashftp/demomapc.exe (English)

For TOS2Win:
http://www.aixit.com/tos2win/info.htm

For STiMul: (still in development)
http://www.micronet.fr/~tenabis/anglais/qaemu_an.htm

For other emulations go to Matthias Jaap homepage:
http://www.hh.schule.de/hhs/computer/english/emulator.htm

For a Teradesk Desktop Replacement:
ftp://ftp.cnam.fr/pub/Atari/Desktops/tdsk140a.lzh

2.2 How do I install it?

Darek Mihocka, of Emulators, Inc., has said before that a manual is in the making for the GEMulator Classic, but one has not surfaced yet. There is one on setting up the GEMulator96 (to be found on the Emulators, Inc. home page).

2.2.1 Installing the GEMulator Classic

Create a directory anywhere on your hard drive. GEM is a good one, though you may want a different one. Place GEMUL8R.EXE, and MAGIC_PC.OS in your

directory, as well as the .VHD and STHDBOOT.SEC files.
Create the GEMUL8R.INI file. You can use the one below. See 2.2.3 for a breakdown of what each line does.

```
rams 8
mono
quick
com1
disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd
magic magic_pc.os
```

You may have seen somewhere that the .INI file has to go in the root. This is an error. The emulator is looking for it in the same directory it's in. If you want it in the root directory, then make it 'magic c:\magic_pc.os,' and it'll find it there. The nice thing about this sort of set-up is that you can have multiple operating systems and desktops.
Run the GEMUL8R.EXE program. You should now be able to see the boot-up screen with the Atari logo, at which moment it'll start a memory check. This check can be bypassed by tapping any key on the keyboard. If all goes well, you will be at the desktop with 4 virtual drives C-F, and two floppy drives A and B.
You may also see that you cannot install the ROMs via the program, using the INSTALL command. This is for the plug-in card that Emulators Inc. sells. See their home page for more information. GEMulator will run without the ROM images if you have this card.

2.2.2 Installing GEMulator96

The Emulators Inc. Web page has instructions on doing this. However, there may be some minor errors or whatnot, so watch this space.

2.2.3 Creating the GEMUL8R.INI file

This paragraph features a breakdown of what the individual lines in the GEMUL8R.INI file do.

rams 8

How much memory do you wish for your ST to have? Make sure you have enough RAM as well. A 4 Mb PC should use rams 4.

mono

What kind of monitor? For now, the GEMulator Classic only uses either low or high resolution.

quick

How fast do you want the emulation to be? Quick or Slow? ST speed or PC speed?

com1

What port is your modem on?

disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd

The virtual hard drives. If you don't have them, the emulator will give you an error saying it can't find them, and all you'll have is access to the A: and B: drives. See above where to find them.

magic magic_pc.os

This is your TOS ROM image. For now, most people are using 2.06. If your image is called TOS.IMG, rename this line to magic tos.img. It will run. Without this line or the .INI file, it will default to searching for the MAGIC_PC.OS file.

g

Will allow you to go straight into the ST screen. It's not really needed, but it's nice to have if you want to go right into it.

---

III: NO WAY - WHAT WON'T WORK ON THE GEMULATOR?

---

This chapter features a list - as complete as we could make it - of various programs that do *not* work on the GEMulator. Individual games (just like Falcons-specific applications such as "Rainbow") are not mentioned, as they generally do not work. Exceptions may be found below, in chapter 4.

3.0 Drawing & Art

Deluxe Paint (the mouse can't be moved).
NeoChrome
Spectrum 512

3.1 DTP, Word Processing and Text Editor

No titles known yet.

3.2 MIDI and Sound

No titles known yet.

3.3 Programming Utilities

No titles known yet.

3.4 Spreadsheets & Databases

No titles known yet.

3.5 Communications

No titles known yet.

3.6 Disk Magazines

Maggie (probably caused by the music).

3.7 Various (including most Utilities)

Diamond Edge
FastCopy pro (appears to work fine if a bit slow, but the target disk has 0 bytes free and no folders)
Freedom (see chapter 5)
Kobold File Copier
LEDPanel (doesn't display anything)
ST Zip (it cant deflate anything; this is not much of a problem, though, as "Winzip.exe" can be assigned to be used, even from GEMulator, and this is much faster anyway)
Xboot (though it can be used to manually rename CPX, AUTO\.PRG and ACC files, it cannot handle its function key sets)

---

IV: YES WAY - THIS WILL RUN ON THE GEMULATOR!

---

This chapter features a list - as complete as we could make it - of various programs that *do* work on the GEMulator. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently.

4.0 Drawing & Art

Degas Elite
ImageCopy

4.1 DTP, Word Processing and Text Editor

1st Word Plus 3.20TT
Calamus SL
Everest
Pagestream
Protext
Tempus (although it does give a "THIS APPLICATION CAN'T FIND THE FOLDER YOU TRIED TO ACCESS" error whenever it's exited - anyone know why, and how this can be solved?)

4.2 MIDI and Sound

No titles known yet.

4.3 Programming Utilities

DevPac ST (*the* standard assembler from HiSoft)
GfA Basic 3

GfA Basic 3 compiler (see 'problems', chapter 5, too)
Interface (resource file designer)

4.4 Spreadsheets & Databases

Data Manager ST
DB Master One
Superbase Professional

4.5 Communications

Flash

4.6 Disk Magazines

ST News Volume 7 Issue 2 and up (provided the music is configured 'off' in
the "SETUP" file)

4.7 Various (including most Utilities)

Atomic 3.5 (packer)
GEMBench (by Ofir Gal)
Geneva
Hiscore Terminal Utility 1.0
Knife ST (though it can't access hard disk sectors outside file mode)
Let 'Em Fly (dialog box enhancer)
MagiC
Mosdos
Mutil (Michtron Disk Utility) (though it can't access hard disk sectors
outside file mode)
NeoDesk 4
New Depack (Sinister Developments - use the ST version)
NVDI
Pack Ice 2.4 (packer)
P.A. Pack (packer)
Revenge Doc Displayer (but see chapter 5!)
Selectric (alternative file selector)
Sysinfo (by H.W.A.M. de Beer)
Ultimate Virus Killer
Wowbagger the Infinitely Prolonged (Grandson of) 4.242 (swearing accessory)

4.8 Games

Don't Worry be Happy
Geneticopoly (AI Monopoly by Roy Stead)
Premium Mah Jong (use standard resolutions, though)

---

V: PROBLEMS...AND HOW TO SOLVE THEM

---

This is the most important segment of the FAQ - the part where practical
problems are exposed and consequently - hopefully - tackled. It's divided in

what is hopefully a practical structure.

5.1 Software compatibility

FREEDOM

Q: "Freedom" appears not to work properly. When you try to save a file with it and the original file already exists, it will merely update the date and time stamp of the original file, but not change its actual contents.
A: ?

GENEVA

Q: When installing "Geneva" via its own installation program, one of its vitally important files, GEM.CNF, is always 0 bytes in size. "Geneva" always needs the specifications in this file when, for example, you want to have "NeoDesk" used as default 'shell'.
A: Create a text file such as the one displayed below (edit it to your own specifications):

```
# GEM.CNF: written by INSTALL.PRG
#
setenv ACCPATH=C:\
setenv PATH=.,C:\GENEVA
setenv ACCEXT=ACC,ACX
setenv GEMEXT=PRG,APP,GTP,EXE
setenv TOSEXT=TOS,TTP
setenv SHOWHELP=C:\GENEVA\HELP\GNVAHELP
# setenv TOSRUN=C:\GENEVA\GNVA_TOS.PRG
# Other commands:
# run <program> <parameters...> Runs a program with parameters
# runsleep <program> <parameters...> Runs program, puts it to sleep
shell C:\NEODESK4\NEODESK.EXE Runs program as the shell
#
# end of GEM.CNF
```

GFA BASIC (COMPILER)

Q: When you use "MENU.PRG" to compile a program, you specify "FILE.GFA" but, for some or other reason, the actual compiling module attempts to access the file "FILE.GFA.GFA"; it autonomously puts an additional (and superfluous) extension behind the file, causing it not to be found.
A: This can be solved by having two identical copies of "FILE.GFA", with the second called "FILE" (right, with no extension). Now manually drag "FILE" onto "GFA_BCOM.PRG". The file "FILE.GFA" will be accessed and compiled, resulting in a "FILE.O" file. Now start "MENU.PRG" and act as usual (F2, F10 is what I usually so, then select "FILE.GFA"). The compiling process will give an error (file not found), but that's no problem and the linking process will access "FILE.O". One "but": You cannot specify the compiler options from "MENU.PRG" anymore, so include them in your source file.

REVENGE DOC DISPLAYER

Q: "Revenge Doc Displayer" refuses to be installed properly as "default"
application for applications not yet assigned to other files.
A: There seems to be no other solution than to edit the NEWDESK.INF file
and add lines similar to the following (include your own RDD3.PRG path):

#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.TXT@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.ASC@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.ME@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.1ST@ @

STOS

Q: Why don't some compiled STOS programs work? This could have something to
do with the TOS version (I'm using 2.06), because a similar problem appeared
in real life on the ST a few years ago, but even with the later versions of
STOS the mouse/keyboard don't respond...
A: ?

XBOOT

Q: "Xboot" cannot read and save its default 'sets', it cannot find its own
C:\XBOOT\" path.
A: The solution may be to start using Virtual disk files. Is there a
solution for regular (non-Virtual) disk mode?

5.2 Programming under GEMulator

END OF FILE RECOGNITION

Q: In "GfA Basic", the EOF(#x) command doesn't find the end of a file.
A: There is no true solution for this one. If the program that needs to
read (for example) a configuration file using EOF(#x) still has its source
code available, you could change the WHILE NOT EOF(#x)...WEND loop to a
DO...LOOP where you exit the loop if an empty line is read (with LINE
INPUT). So you have to make sure you add an empty line or two at the end of,
in this case, the configuration file.

JOYSTICK EMULATION

Q: Can joysticks be emulated?
A: ?

WRITE-PROTECTED DISKS

Q: There is a perfect way to check the write-protect status of a floppy
disk on *any* Atari system (Falcon, TT, ST, whatever), achieved by the
following piece of code ("GfA Basic"):

```
FUNCTION wrpr(crd%) !crd% contains 0 - drive A or 1 - drive B
SDPOKE &H43E,-1 !Floppy operations off
~XBIOS(29,NOT (2*(crd%+1))) !Select drive
SDPOKE &HFF8606,&H80 !FDC-status register select
buf%=DPEEK(&HFF8604) !FDC-status register read
~XBIOS(30,2*(crd%+1)) !Deselect drive
SDPOKE &H43E,0
```

```
buf%=(buf% AND 64)/64 !Isolate WP-bit
RETURN buf%
ENDFUNC
```

Predictably, due to the direct access on addresses FFFF8604 and FFFF8606, this doesn't work on the GEMulator. How can this be solved?
A: ?

5.3 Miscellaneous

Any problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

AUTO FOLDER ON DRIVE A:

Q: How do you boot programs from an AUTO folder on drive A?
A: Set the 'Boot disk' option to drive A (RTFM!).

I/O PROBLEMS ON GEMULATOR CLASSIC

Q: I have several problems with I/O on GEMulator Classic:
- Serial port: there is no DTR signal. Cannot talk the to modem unless I have first sent "at&d0" (ignore DTR, for USR Sportster 14.4 external) from outside GEMulator before entering Atari mode. But even then it goes unresponsive after connect.
- Parallel port: errant characters are sent to the printer for no reason I can think of. Every now and then the laser printer spits out a page with a single capital "E" in the upper left corner.
- Floppy: media change is seldom recognized. I have to reboot when changing floppies.
A: ?

MS-DOS VS. ATARI-FORMAT DISKS

Q: I cannot read all Atari disks on the PC.
A: MS-DOS and Windows are very picky when it comes to being able to read disks. Even though Atari systems use a disk format that is largely compatible with PCs, MS-DOS and Windows require very specific values to be present in a disk's bootsector. Together with GEMulator you should get a program by the name of MOSDOS.PRG. This Atari program will transform Atari-formatted disks into ones that MS-DOS and Windows can read. Do note that this does not work with non-standard Atari format (such as 10 sectors per track 'FAT' disks, hyper-formatted disks, etc.).

PRINTING

Q: When I print, the printer stops before the printer buffer is fully flushed. I have to start another print job to finish my first job. I'm using GEMulator 4.15 on a P133 running Win95. I've tried default, Fast BIOS Printing, and FPPRINT (or whatever it's called) with the same results. I'm trying to print to a Canon BJ-200. I had no such problems using GEMulator 3.x on my old 486 DX2/66.
A: ?

SOUND

Q: On GEMulator Classic, with sound emulation on, the first keypress starts
a continuous high-pitched tone, not too loud, from both channels
(Soundblaster clone, Forte 16). On GEMulator96, there is a constantly
repeated sound, as if the volume is turned on and off a few times per
second. XBIOS 32 sound is garbled (Soundblaster clone OptiMAD).
A: ?

## 4225. Atari shows in April!

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <857222823@news.compulink.com>
Source record: 126687

well, I finally made my vacation plans, and it looks like I'll be coming to at least one of the planned Atari shows in the UK in April! Now I'd like to get some information from the UK people on this newsgroup..

a) how far is Birmingham from London? How long will it take to travel there? What is the best route? (I've been to London before, so I can navigate the underground OK).

b) what route will I be taking to the London show (most likely I'll be leaving from Holborn Station)

Any info on how to get around will be appreciated - and I hope to see many you face to face there :)

# 4226. Q:Postscript sys for GDOS??

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: please@no.spam.mail.here.mettav
Message-ID: <30449_please@no.spam.mail.here.mettav>
Source record: 126688

This message from di94rkr@student.hk-r.se to All came in on a wing and a
prayer...

Hi Richard!

d> Hi, anyone here who knows if it's possible to
d> make a postscript output (to printer or disk) with
d> GDOS (NVDI). I got an old sys driver but it doesn't
There is a postscript module that you can add to NVDI, I think that it's only
for V4.11 and above tho'.

d> I have a +65 pages dokument in Papyrus format that I
d> want to send a friend, but he hasn't got an Atari
d> computer. Can I in some way print the dokument
d> to file in postscript format if I use NVDI?
The alternative would be to export the document as RTF (Rich Text Format)
from Papyrus, that should preserve fonts/styling etc or as ASCII, which wo

Speak to 'ya later!

SUBJ: AUTO program to clear memory? (warm boot=bombs)

h> So.... is there some kind of program I could put in my AUTO folder
h> (naturally making it the first program to run) which properly clears all
h> memory in the machine, so the computer starts off "fresh" each time?

Make sure that the first auto prog has the fastload set off, that'l clear all
remaining memory.

To make sure almost all memory is cleared this way you could write a program
with nothing more than a NOP in it. TOS will clear all memeory after that
then if the fastload is off.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

>voltage line goes.
>

Yep I've been using one for a couple of years, rescued from a dead
Apricot machine. Strangely enough there was nothing wrong with the old
ST supply it just wouldn't fit back in the case after a homebrew
memory upgrade ;)

I just spliced the cable from the ST supply to one of the cables from
the Apricot unit. If memory serves me correctly the 12v lead on the ST
is blue and PC's tend to go for yellow for this voltage. It is wise to
check voltages with a meter before making any connections. PC supplies
normally have a capacity of about 150W which leaves plenty of power
spare for disk drives etc. Hey, the plugs just plug right in as well
;)

Of course I accept no responsibility for anything that might happen to
your ST when modified in this way and get a supply that is in a fully
enclosed box (most of them are) for obvious safety reasons.

Gaz.

>>If you do manage to get an agreement with an author then there's
>>always the possibility they can tell you how to disable it?
>
>Highly unlikely. Time goes by, source gets lost, disks go bad. Memories fade!

I see disk protection schemes as being the least of our worries. The games could be put in the ftp sites or whatever as MSA disk images which takes care of quite a few protection methods (I hear). A much bigger problem is games with 'manual' protection and manuals in general. Games like Midwinter and Grand Prix both come with huge manuals both for protection purposes and to show you how to play the game. What is to be done about that?

I'm risking a bit of flack here, so I'll make this statement now, I have never pirated any games or software, ever. I always pay shareware fees if they are reasonable, if I use the software and if I like it. I wish more poeple would do the decent thing and register shareware, then, I think the ST market would be a lot better supported. Two examples that come to mind are Oasis and Cab both are now(or shortly to be) commercial releases probably because the authors didn't get enough revenue from the shareware releases. In the case of Oasis I didn't register because I was never satisfied with the quality of any of the released versions (so slow and buggy you'd think it was developed by ARC <g>) but I did register CAB as it is a cracking effort and was regularly updated to fix bugs and add new features, without CAB I would be using a PC now, it's saved my ST. Something to bear in mind is the message sent out to shareware users that do register when the author, instead of continuing support for registered users sells out and releases the next update as 'commercial'. I'm left wondering why I bothered to register CAB at all, as I'm going to have to pay for it again if I want support in the future.

Sorry I've drifted off topic completely. What I really wanted to say was that these people that are being prissy about not pirating ST software are silly in the extreme. Pirating did not kill the ST, pirating did not kill the Amiga, and it certainly isn't killing the PC. I know a guy that can give me virtually any bit of PC software for nothing and he runs a computer shop! Does he worry about his profits? No. He looks upon the practice as an unofficial shareware scheme, if people like the software they usually end up buying it to get the manuals and some support. Now the ST is considered by most software

developers to be dead meat and they have no plans or intentions to make any money out of the system so what difference does it make to them if we copy some old games and spread them around a bit? None whatsoever. Pirating stuff like Geneva, Cubase and all the other stuff that is still supported is bad, very bad. Pirating (INSERT NAME OF ANY COMMERCIAL ST GAME) is not going to hurt anybody, really and can only do good by maintaining and possibly increasing the user base. Machines can be picked up for a few quid these days (usually with lots of software thrown in) a real bargain. I have a friend that got and old Amstrad thing for a tenner and he nips down to his local second hand shop every couple of weeks and buys game cassettes!! at 20 pence each for it. He's as happy as Larry with it and rightly so. The smart PC purchaser does not spend thousands on the lastest soon to be obsolete MMx Pentium penis extension when he can get a 286 machine for 50 quid, a 386 for 100 quid and a 486 for 200. I'm waiting for the price of non-MMX Pentiums to crash and then maybe I'll buy one (I have a neolithic '86 machine which I use for running some of my test equipment with (due only to the fact that Atari neglected to implement the Centronics port properly) which cost me nothing at all (I found it in a skip) and it does the job adequately).

Now it's time I shut up (I'm rambling badly (and nesting my bracket(never a good sign))), Gaz.

Hi everyone!

Thanks for all your advice so far. Well, here's an update of my SLM-804 trouble:

The ID-test of SCSItools doesn't see the SLM-controller at all, although the controller's LED flashes at the moment ID-test is checking ACSI-device 7. So this is definately a hardware problem.

Does anyone recognize this problem, in other words, does anyone have an advice for me, except beating up the guy who sold it to me? ;^) (Don't worry about that, I hardly paid anything for it)

Thanks!

Maurits.

It's an interesting idea. Nolan Bushnell has his hands in many pots, it seems. I worked at a startup company which he was the CEO of for a brief period of time (and later got enbroiled in a long lawsuit with), and he was also behind an attempt to buy out the Commodore properties, or at least part of them, early in the Commodore bankruptcy.

So if there IS some sort of initiative brewing for what Dvorak describes, it's not surprising that Bushnell would be involved.

# 4240. mail software - Mutt and metamail

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: Guido Flohr <gufl0000@stud.uni-sb.de>
Message-ID: <5f9nmj$ngv@hades.rz.uni-sb.de>
Source record: 126702

Hi there!

I've ported two software packages to the Atari. Both are mainly of interest to MiNT-users. Parts of it can be useful for folks without MiNT, too.

First there is metamail. It contains most programs (and shell scripts) that many Eunuchs-Mailers need to support MIME mails. And what's MIME? A brief description:

The e-mail standards (still valid: RFC - i. e. "Request For Comment" - No. 821) suffers from some deficiencies, especially a restriction to 7 bit. This restriction implies that mails with french, spanish, german... special characters are actually binary files since they use 8 bit characters. You have to be tricky to transport such mails. "Real" binaries (programs, images, sound files etc.) actually can't be transported at all.

MIME (Multi-purpose Internet Mail Extensions) tries to solve some of these problems: Each mail gets several additional header files. One of them ("Content-Type") describes the kind of file that is transported (e. g. text, graphics, sound, compressed files, even splitted mails or multipart messages like a small text plus a little image plus maybe a PostScript file). A second header field describes what kind of technique to use to decode the Mail from 7 bit back to 8 bit. Exactly two techniques exist: First we have "quoted-printable". That's quite simple. Every 7 bit character except "=" remains unchanged. 8 bit characters (i. e. special characters) get encoded by the sequence "equality sign" plus the character's hex code. That's only useful for textual files that typically contain many 7 bits and only a small number of 8 bits.

The second technique is called base64 and is actually an impoved uudecode/uuencode (if you really think it's an improvement or not is up to you; as a matter of fact it's a standard that is widely used).

In the metamail package you will find a programm called mimencode (aka mmencode) that can encode/decode both quoted-printable and base64. As far as I can see it, it should run without MiNT, too.

More about MIME. When receiving a mail you will probably want to read (view, hear, smell ...) it. The mailer will therefore call metamail for every mail that it can't display itself (like

graphics or sound). Metamail looks at the content-type header field to decide which program to use for displaying the message. If somebody sends you a photo as a jpeg - provided that you've configured everything correctly - the photo will pop up on your screen automatically. You never have to call a program like mmencode or uudecode yourself.

To test it /in vivo/ you should get a mailer that supports MIME. The elm version that you find enclosed in KEMD (the english version of KGMD) is a possible choice. A better choice is Mutt. Mutt is a Unix-maile, similar to elm but with some nice additional features:

- Color! (actually only with TOSWIN)
- PGP support (definitely only with MiNT!), fully MIME-compatible. That implies automatic checking of signatures, automatic decryption of incoming mails, optional signing/encrypting of outgoing mails
- POP3 support, i. e. mails can be downloaded from your provider's server from within the mailer
- mailing-Lists and message-threading
- indefinite postponing of outgoing messages
- customizable key bindings

Alas, you have to leave your mouse aside. However Mutt has a very intuitive user interface. Of course you can use GEM applications for the auxialiary programs (like editor, viewer and so on) as long as your shell allows to run GEM programs. (With bash or tcsh no problem.)

Both Mutt and metamail contain an exhaustive README by me, especially for Atari. In one of them (sorry, forgot which one) you will also find a description how to spool outgoing mails with smail (included in KEMD). Together with MiNTNet you can do the entire e-mail thing 100 % offline. Sorry, no solution for news available yet.

You will find both packages on ftp.phil.uni-sb.de. Metamail at /pub/atari/mint/mail/mm2.7... (ca. 270k) and Mutt at /pub/atari/mint/mail/mutt-0.55... (ca. 340k).

Have fun!

Guido

P.S.: You want to try it out? You need a MIME-mail: Send a mail with the subject "MH MIME sample" to mh-mime-sample@online.ora.com.

# 4241. Atari Software for sale (UK)

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: publish@zetnet.co.uk
Message-ID: <5f9prv$ulc@irk.zetnet.co.uk>
Source record: 126703

ATARI SOFTWARE FOR SALE
**********

Due to various purchases over the past few years I've gathered rather too
many extra bits of software, which I either have already, or have no use
for, mainly due to my inability to program and total lack of artistic
talent!

The following are all original, and come complete with manuals and original packaging, and extra hardware if required. I've checked to make sure that none of these items have been used for upgrade purposes already, so they may be a cheap way on to the upgrade ladder in some cases :-)

I'm not looking for vast amounts of money, just postage and packing at cost and a donation to the 'Falcon Fighting Fund'. I'll get more satisfaction at knowing someone is making use of the software, than anything else really! However, I have placed a '*' value on some of the items, so I'd appreciate offers around this figure, but feel free to barter!

If anyone wants further info on any item, I'll gladly provide it to the best of my knowledge.

Off we go then:

GRAPHICS-RELATED
Film Director - animation program
Deluxe Paint - graphics/animation (brilliant!) * £7.00
Canvas - graphics/animation
Neochrome - graphics (full Atari version + extra disk)
Truepaint - graphics/animation * £7.00
Degas Elite - graphics

WORD PROCESSING/DTP
Redacteur 3 - the full package with everything (totally amazing!) * £25.00
Calligrapher Pro (still much better than Papyrus in many areas!) * £15.00
Protext 4.3 (say no more - fast and feature-rich!) * £5.00

MUSIC
TCB Tracker - with hardware * £5.00
StereoMaster (sampling cartridge for STFM/STe) - loads of fun! * £7.00
Take Control Music DTP

PROGRAMMING
Tempus 2 (classic ain't it!) * make me an offer!

UTILITY
Neodesk 3

Harlekin 2
NVDI 2.11 (92)
NVDI 2.5 (93)
Warp 9
Quick ST 3
Imagecopy V1.1

MISCELLANEOUS
Home Accounts

GAMES
Cards
Chase HQ 2 - a Doug Little production!
Winners - 4 games (Thunderblade/LEDStorm/Blasteroids/Impossible Mission
RVF Honda
Saragon 3 (Chess)
Battle Chess

ATARI FAMILY CURRICULUM PACKAGES
Business module (1 copy)
GCSE module (5 copies)
Play and Learn module (2 copies)
Junior School module (3 copies)

Please go ahead and make me an offer. P&P will be extra, but I will only
charge what it costs me, no more!

Email offers and feel free to ask for any extra information :-)))

Non-UK sales no problem, but there will be extra postage to pay
unfortunately! :-((

Best wishes
Mike Kerslake

# 4242. Re: starcall

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: fvdakker@mrose.nl
Message-ID: <8572608322701@wise.mrose.nl>
Source record: 126704

RI>>I've downloaded a demo of starcall from ftp.teleport.com/users/atari, I
RI>>can download ok from a friends falcon and upload ok to my server, but I
RI>>don't seem to be able to download from my server, it comes up with "data
RI>>subpacket too long". I've tried all settings I can think of. I use a
RI>>Falcon, tos4.04 and am using hsmodem7, any one have any ideas?

RI>You're doing better than I am - I use FastSerial, but even after I isntalled
RI>HSmodem (again - version 7 I think) I can't get it to dial out using the TT
RI>Modem2 port. Sometimes it will do it if I enter the dial commands manually,
RI>but never from the dialer dialog. Too bad, I'd register it in a heartbeat
RI>if it worked properly, it looks absolutely smashing in 16 color TT medium
RI>rez.

IMHO STarCall is the best. I don't have a very resent version anymore
(21E, 7-96), but i works teriffic on my Falcon. I'll put it on my
web-site, if you want.
http://mrose.nl/program/files/index.htm
Ask me first, though!

Greetings,

Frits.

## 4243. Page stream drivers

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: John.Kormylo@7861.conchbbs.com
Message-ID: <cf9_9703011210@conchbbs.com>
Source record: 126705

d > I have got Page Stream 2.2 and a hp deskjet 550c. The problem
d > is that I haven't got a driver for my printer.

I have released (freeware) PGS drivers for all 5xx and 6xx deskjets,
both B&W (600 dpi max) and color (300 dpi max). These use all 4
possible raster compression methods to minimize print time.

They aren't very large, so I could UUE or MIME them to you easily.
(I really need to get my own web page!)

# 4244. FS: Atari ST with monitor

Newsgroup: comp.sys.atari.st
Date: 1997-03-01 00:00:00 UTC
From: Jorge Barrios Sanchez <sjbarrio@hamlet.uncg.edu>
Message-ID: <Pine.GSO.3.93.970301125348.25988A-100000@hamlet.uncg.edu>
Source record: 126706

I have an atari 520 st with a monitor and cables, but no software. I know the system works but I lost the disks that came with it.

If anyone is interested I will sell the whole system for $150 + shipping COD.

Reply via e-mail

In article <5f5qv1$aaf@brain.npiec.on.ca>, rszermin@freenet.npiec.on.ca says...

>the window closes). Then, when I go into cab, it says "Resolving host"
>when I try to go to some local addresses and just sits there (every

Ok.. This is a well known problem.

1. You must use HSModem!
2. You must put the RIGHT numbers on the
BAUD_RATE option in DIAL.SCR
19200 for a 14.4 modem or
38400 for a 28.8 modem.

Often people put in the speed of the modem! Not the serialport
speed. Try this and it should work.

Or FTP them to a public site, perhaps Atari Archive, so they'd be
available to everyone without you having to manually handle each
request?

> the small hole on the upper left of the HD-Disk - so it'll be recognized
> as DD-Disk. Of course it still has to be formatted in DD-mode.

This is all completely true, apparently the only difference between the
2 formats is a 4 byte 'signature' which the PC requires and the Atari
ignores, sadly because the ST didn't need it they used a different one,
this was supposedly fixed in TOS 1.4 and above but some people have
found this not to be the case, many formatters exist that will offer PC
Compatible formatting.
It is also not a great idea to use HD disks with the hole sellotaped
over, the disks are of different densities and the chances of errors are
far greater, NEVER store original data on a HD disk used as a DD disk.

> and isn't too robust, according to some people.

The rate isn't too slow but a lot slower than hard drives in general as it's actually a very fast floppy drive! I got around 850k/second on my ST which was fine for me. As for robustness well the ZIP does look and feel cheper but it's perfectly OK for me and it's portable, when it comes to disks though I'd say the ZIP disks are far more robust, which would you think is more likely to survive a fall, a hrad drive or a floppy disk?

> Regarding the Zip, buy any PC/computer mag and you'll find them for

I think I can manage to resist a response tot hat :)

> b) good consoles arrived

True.

> c) Atari had no idea how to market a good machine
> d) Atari had no idea how to make a good machine better

True, the Atari was still a very popular machine, the problem wasn't the
marketting of the machine (at least not to start with) it was the
support and development of it, it sold incredibly well it was apparently
the best selling computer in the UK in 1988 however as other computers
got better and better we got a few extra colours and better sound :(

> e) Atari had no idea, full stop
>
> I doubt piracy ever even made a dent in developers' pockets. Most people who

Losses to the industry are always exaggerated but they certainly made a
dent in developrs pockets.

> Old argument anyway, and boring...

Good point.

>
> The above comment has me rather worried :(

Yep, some people don't realise that the 25 pin plug is standard because
the 50 pin centronics thing is far more widespread. I have a ZIP and
yep a plain old SCSI cable works perfectly, BTW I take it that you
already have another SCSI device to chain it to, you do need one. The
ZIP does not supply termination power which the SCSI adaptor needs so
you need to chain it to another device, actually as you have a Falcon
this shouldn't be a problem in any way.
BTW the Jaz is a 1GB drive that uses the more traditional removable
platter HD design unlike the floppy design of the Zip. The Ditto is a
removable tape backup drive, 230mb IIRC.

That's funny, I sold a 2nd hand FM about a month ago for 120 quid and
before you return witht he predictable response of "he was conned" or
similar, I spoke to him recently and he is very happy with his machine
and wanted to know where to get some more memory from.

> You can't compare ST software to an
> IBM compatible... You guys are dreaming??

What's with all the questions, are you not too sure? If you don't own
any Atari hardware then I have no idea why you would have software that
you want to use especially as you seem tot heink that the IBM stuff is
better!

> TOS images in my option are worth
> 2 cents...

I don't think even you are stupid enough for this to be your honest
opinion.

> Anyway how is someone supposed to evaluate these emulators if
> they don't have the images!!! If that's the case then don't put out any
> demos!!!!

You want them to remove these demos because pirates can't use them, it's
only people that legally own the software that can use them? And THAT
is a decent reason???

>
>I forget... what does it take to hook up a color multiscan PC monitor to an ST?

One ST monitor plug, one high-density 15-pin sub-D female connector, a soldering iron, REALLY good eyes, a steady hand, and a lot of patience. Details can be found at ftp://ftp.teleport.com/users/atari/multsync.faq

Try to be the best of whatever you are, even if what you are is no good.

My System Solutions catalogue shows a program called "The digital sound
module" which does just this!
Itt utilises the DSP chip in the Falcon to create a 24 note polyphonice,
16 part multi-timbral General MIDI sound module.
As my catalogue is a pretty old one (1995) the program was just about to
become available, so no pricing was given, but I'm sure you'll get all the
details by contacting them directly:

I had once a 520ST with the same problem. The video shifter was come to the
end of his life. A new shifter and all problems were gone. I also have a
language disk with a ram Tos. Just mail me if you want a copy.

>
> -Dana
>.

Yep, here what A Claus wrote in the "new.txt" frome the Beta5 release.

---------------------------------------------------------------------
If you look at the "about" dialog, you'll notice that the freeware
messages are gone. That means CAB 2.0 is no longer freeware. It will
be sold by ASH. There will be a free demo version which is fully
functional with the exception that the hotlist can't be saved
and some annoying dialog boxes will appear.

From: lmcclure@aristotle.net
Message-ID: <5f811i$32n@socrates.aristotle.net>
Source record: 126764

In article <857142515@news.compulink.com>, dreibel@idirect.com says...

>One of the nice things about it is that it has standard SCSI connectors (not
>those propriety connectors found on the ZIP and JAZ that require special
>cables) -

Neither the Zip nor the Jaz use "proprietary" connectors. The DB-25 used on
the Zip, while not the best SCSI connector, is found on many machines,
including Macs, many Amiga HD interfaces (and the A3000 itself), and even
the Atari TT.

From what I understand, the Jaz uses a HDB-50 connector, which is the
"standard" connector for SCSI-II. You will find this on the back of the
Atari Falcon030, many workstations, and most high-end SCSI external equipment
and controllers (unless they are using the 68-pin Wide SCSI varient).

# 4265. Re: JPEG image manipulation

Newsgroup: comp.sys.atari.st

Simon@husbands.demon.co.uk (Simon Husbands) said:-

>Hi to all out there........
>
>Could anyone suggest a program that will allow me to view JPG files and then
>alter the sizes ( I have some scanned JPG files and want to be able to trim
>them, and also to be able to produce thumbnail versions for my site )? I'm
>hoping for something without too many frills - cheap and cheerful! Any ideas?
>

Imagecopy 4 can do this and lots more.
You can get it from:
FaST Club
PO Box 101
Nottingham
NG2 7NN
Tel: 0115-945-5250
Fax: 0115-914-0545
email: stclub@cix.compulink.co.uk
w3: http://www.compulink.co.uk/~sta/
Right now they're selling it for £24.95

There is also an utility called Altalist that makes a
thumbnail-catalogue in htm-form of your gif's and jpeg's pictures
placed on your harddisk. With a little work you'd be able to transform
the htm for use on your website.
alta_lst.prg can probably be found on:
ftp://193.190.205.13/archive/atari/

Hope this help
Martin

Hoi,

I've the same problem as Jo. In fact I've found that I can't visite
aol pages at all. Why?

>The fact that you receive an empty document could be a bug in CAB as well as
>in STiK.

It has certainly nothing to do with STik as Jo and I doesn't use STik.
We use Cab under MiNT/Mintnet with the cab-for-mintnet.ovl.

Source record: 126572

PA>Has anyone found a way around the 'System out of memory' bug when you've got
PA>Newdesk.INF file that's bigger than 4096 bytes ?

PA>It's *really* getting on my nerves now and, yes, I *really* do need to have
PA>that many Applications installed and my Desktop covered in Icons :))

I have a program, instyalled as default vieuwer that handles all
filetypes. So, if I click on a .PAP file, CONTACT starts (that's the
program) and that detects the .PAP extentions and starts Papyrus with
the filename in the commanline.
Work great for most apps!
This will make your DESKTOP.INF smaller, because you'll have to install
only one application (*.* for CONTACT) instead of the 100+ (?) lines you
have now.
This doesn't work for icons though.

No way if it is one of the original ATARI laser printers. Atari did not include any RAM or CPU in the darn thing. They saved a few bucks by doing this and did not pass the savings on to the users. The printer appeared to operate fast due to the direct connection to the STs high speed "SKIZZY" port.

It is still a "good" printer for an Atari system but supplies are more expensive than for any other laser printer. If you need a printer for an IBM there are some very good buys out there.

Actually, it turns out I was wrong on a couple of counts. Another
reader left me e-mail to say that the Jaz drive has standard SCSI II
connectors on the back; the Zip uses another type altogether. I decided
against the Jaz and Zip because it would've required two extra cables (I've
already got a working SCSI system and wanted to add onto it)

: >be freely distributable (within reason).

a TSR approach to this under MiNT is a _bad_ move. Causes all sorts of
problems. Also, you can't load and unload modules on the fly. Fine if you
intending this to be used for SingleTOS without MiNT (TOS in ROM, basically),
but if you want this to work with MiNT then you'll need a big redesign.

: Shared libraries are really only useful in a multitasking environment,
: otherwise only a single process would ever use them at a time anyway.
: Of course there are benefits of being able to fix bugs without re-linking
: the executable.

: You may want to look at MiNT--it may have support for shared libs.

It doesn't as far as I know.

: Also, shared libs, if not implemented correctly, may cause problems in
: a multitasking environment with memory protection between processes.

Exactly.

: Generally, shared lib code will reside in "shared, read-only executable"
: memory space.

I would argue that a shared library/module/whatever who _always_ be in shared,
read-only memory. Anything that the module wants to be able to change should
always belong to the client application.

Incidentally, I am working on a Component Manager for MiNT (and only MiNT --
it won't work without multitasking support). I have no idea when it will be
finished, but I'm hoping that I will have a little time in about 13 weeks
(when I finish my degree -- wayhay!! :). It's all designed, and partially
coded -- I just need time to sit and code the rest.

Cheers,

James Cox.

Um - why are you asking in comp.sys.atari.st then? Presumably the linux box
is using a distribution in which case just get it from that. Debian is
currently trying a new distribution prior to releasing 1.3, if it is Debian
you are using, then I would try and wait a week or so and see if they have
sorted out the minor but irritating problem (you have to do a deinstall
manually rather than automatically AFAIK).

# 4285. Atari Programs For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-02 00:00:00 UTC
From: brianj@iwl.net
Message-ID: <5fc2f2$9us@news.iwl.net>
Source record: 126585

I have the following Atari ST software for sale. All have original disks and documentation. Most also have original packaging. Shipping is an additional $1.50 in the US.

GFA Basic 3.0 $15.00
BB ST (Bulletin Board) $10.00
Omega $10.00
Drakkhen $10.00
Defenders of the Crown $5.00
Silent Service $5.00
Carrier Command $5.00
Virus $5.00
Empire 2.0 $5.00
Combat Course $5.00
Terrorpods $5.00
Universal Military Sim $5.00
Test Drive $5.00
Rogue $5.00
Starglider $5.00
OIDS $5.00

I will sell the entire lot for $50.00 and I will cover shipping costs.

E-mail brianj@iwl.net if interested.

The solution is, that your provider doesn't have subscripe to aol
pages. I have two providers. With one I can show the aol page. With
the other I get an empty page.

: > A: ?
:
: Something real STs often have problems with because of a bug in TOS as I
: recall; however Gemulator is much worse in this area - makes you wonder
: if they are bothering to check if the disk is changed at all.

It's no bug. Just tap the ESC key when you put in a new disk. I don't know why no one bothered to mention this.

: Probably didn't get a form feed at the end. Some printer drivers have
: an option to add a form feed at the end of a job. Otherwise, try
: printing an empty page from another program afterwards.

Could be that it doesn't have an EOF at the end as well.

You don't need the TOS card, although it's handy. And to concentrate on
GEMulator was caused by the fact that A) It's said to be the best and B) I've
got one. Does "least accessible" by any chance stand for "least easily
pirated"? <grin>
Granted, though, GEMulator in the TOS card set-up is much too expensive. If I
hadn't been able to get it cheaper, I would probably not have bought it.

It does, indeed. But it's not a bug in TOS. Like I said, this GfA Basic bit of
code works on *all* TOS versions, including 2.06 that GEMulator uses in my
setup.

g> the printer?

No, but then I really don't see the purpose of that myself? Let me explain
that .. if I want to print something it's usually a spur of the moment thing
. so to have to save it to a file then print after that means double
handling IYSWIM.

I shall try it though to see if it's better ...

Maybe everybody that has used Pacifist should give info to the Gemulator
author and maybe there could be an Atari ST emulator faq. Just a
thought.

I found your old post of AR20SET.ARC and AR20BOOT.ARC on Umich, but
I never found any other archive describing the modification itself,
or newer versions such as AR35 or AR36...

Where can I find a complete AR20, AR35 and AR36 archive, preferably
on a public FTP site? I found your AR20 posts through Shareware.com
but the whole archive wasn't there, only the 2 ARC mentioned above.

Any clues?

Gary@the-gap.demon.co.uk writes:

GP>I thought I could just buy a ZIP drive and buy a SCSII 2 cable from
GP>Maplins. And hey presto!!

You can do this - and I think you dont need a special cable. I bought a
external ZIP drive last week, it includes a SCSI cable (2 DB25 male), I
simply plugged to my TT external SCSI (DB25 female). It works very well. 8-)

GP>I have got a Falcon, running AHDI 6. Can someone please confirm that
GP>all I need to do is buy the ZIP drive and a SCSII 2 cable (from
GP>Maplins probably) and plug and go???

With AHDI 6 you hat to use a program called AHDIPATCH. AHDI searches all SCSI
IDs until it finds an empty one. Then it stops. The ZIP can run on SCSI ID 5
or 6, so have an emtyp ID (I expect, your Hardrive is ID 0) and AHDI stops.
Whith AHDIPATCH, AHDI will test all SCSI ID and finally found your ZIP.

An alternative way is to use Uwe Seimets HDDRIVER, no patches ar needed,
and it supports the ZIP features 'write protection' and 'password protection'.

Look out for STELLA. STELLA is a powerful tool to view, catalogue and manipulate pictures and other documents. It generates thumbnails, and it can trim you pictures, and many things more. There is only one thing: All docs are complete in german...

You can find STELLA in many mailboxes of the german MausNet, or in Compuserves Atari library. I aks the author to put it on a ftp site, so you could easy access it.

>>>> Well when i use it in Papyrus, which aint often these days now, i
>>>> set Papyrus to print to a file, and point it to U:\DEV\FPRN when the
>>>> F- Selector opens.

m>>> I think you are a bit confused about DEV_FPRN.DEV all you do is
m>>> put it in the auto app or what ever in the magic set up and forget
m>>> it.

DC>> This flies in the face of the readme file, which states that
DC>> printer output should be redirected to a file as has already been
DC>> stated.

SS> Hm!, i redirect it to the device.
Yep, I didn't state that, but it's what I mean, after setting the CPX to
print to a file you pick drive U: with fprn as the filename.

SS> My thinking is that its passed to the device as a data stream so its a
SS> virtual file, then this device passes it as its been taught to the
SS> printer.
As do the other devices in the U: folder I guess.

m> I guess that's all that's left.. :(
If that checks out OK then someone might have a controller they don't want.

Also try the printer plugged into the DMA port on the ST without the hard drive connected to see what happens.

I believe many persons have tested to use LAN port. But this usage is not
documented even it is similar at keyboard port...I think it is easier to
connect the two cartridges port. They are easy to program for
communication. Parallel port (printer port) is bidirectionnal on Falcon
but not on 1040 STFM. Finally, ITOS LAN network (cable with program) is
certainly also a good solution but it is difficult to obtain.
Good Luck !

Hello.
This is the first article from this tread I'm reading - the previous are not kept here anymore. I don't know what the question was, but I would ask everybody if they know something about the information above. I've tryed to use Gemulator Classic (I think 3.6?) with the TOS image TOS 1.02, but it hangs up and I didn't know why. The machine ist 486DX2/50, 4MB RAM (and I've tried with ramsize 512 to 2048K), and it has am ethernet card. I would like to know if I would det this combination working.
Bye.

No.

This isn't a binary group. If you want a copy of it then you must own
it the licence to use it and you can copy it from your own roms, if you
don't own it/have a licence then you can't have it.

It hang up this way: the screen was blank and after a minute or so it bekame
black. I didn't see another change after that.
I've tested Gemulator with magic_pc.os from the Magic_PC.demo, but it
doesn't work either. It says about a program crash. BTW, the Gemulator says
there are "ROMS detected on 1 card at port $240) although i don't have any
(see above).

Is it true Gemulator Classic woudn't work without a hardware card??? I hear
it for the first time. But i haven't also seen the program running without
it.

Not quite. The Classic works with and without a TOS board. To make it work without the TOS board, you need to have the TOS images in the same directory as the Classic. Richard Karsmakers and I have been writing a FAQ for the Gemulator for awhile.

Some TOSes won't work with Gemulator. I've tried various versions of 1.0, including a Swedish version someone sent me. All caused the Classic to crash with an error 15. I've not yet done it with 1.02, 1.04, or 1.06, or 1.62 yet, though I will. It seems to work best with 2.06. I saw a listing of what TOSes will work with it, but seems I can't find it now.

It's not required. It searches for it, yes, but it doesn't require it. If you have the TOS ROM renamed as MAGIC_PC.OS, and in the same directory as the Classic, it will use that. For the 96, from what I've heard, it has to be in the root directory, I believe. I've run the Classic enough times to get to know it.

I have two reference books from Abacus for sale:

-- GEM Programmer's Reference
-- ST Internals

Asking $12+shipping for each or $20+shipping for the two.

# 4322. Free MIDI Sequencer

Newsgroup: comp.sys.atari.st
Date: 1997-03-02 00:00:00 UTC
From: Rolf Nilsson / RONI MUSIC <roni@mbox317.swipnet.se>
Message-ID: <331932A9.729A@mbox317.swipnet.se>
Source record: 126657

Hello,

Roni Music Home Page offers free down load of the Sweet Sixteen MIDI
Sequencer for Windows and Atari computers.

Sweet Sixteen is a comprehensive and powerful MIDI sequencer for
PC/Windows and
Atari ST/STE range of computers.
Sweet Sixteen offers Piano Roll, List and Transform edit pages as well
as a
dedicated Mixer page you can use for your favourite synthesizer.

Two versions are available:
1. A demo version which is a complete version of Sweet Sixteen with all
file saving disabled.
2. A "lite" version which lets the user save files but certain other
functions are disabled.

Check it out at: http://home1.swipnet.se/~w-11396

With HDDRIVER 6 using a ZIP is plug and play. Of course you need the
appropriate cable. With HDDRIVER 6 you're not only able to use the ZIP
like any other removable drive but you also have support of the ZIP's
unique read/write protection features.

>Newdesk.INF file that's bigger than 4096 bytes ?

There is text file 'TOS survival kit' or something if the sort, which
describes this maximum limit.
I've tested it rather thoroughly.
There seems to be a maximum number of icons on the desktop as well!

There is one solution:

Use 'GEMRAM' + SHBUF'.
These can be found on most Atari archives.
SHBUF allocates an amount of memory for desktop info.
The catch is, it needs GEMRAM.
GEMRAM loads GEM into RAM.

Another solution:

Use an alternative desktop, like 'Thing'.
Quite exellent!
Really improves your user interface as well.

I have the full version of gemulator using MagiC503
I Also use the demo version of gemulator that uses a tos206img
I have TostoWin installed as well

Last night I installed Pacifist :), all the emulators seem equaly
good at running GEM programs....with gemulator only catching up on
speed if run in directx full screen, this is on a dx 4x100

But ho joy at last, pacifist is an emulator that actualy runs most
games, unlike the other two, bit of a bugger to set up at first but
the program is in its infancy?, but it works on every game I have made
and runs the game I am currently makiing for the ST, all at remarkably
simmilar speeds, and it uses the joypad...blimey, this puts Pacifist
well apart from the rest...seriously, I have the others and have them
working perfectly, but pacifist wipes the floor with them for games:)

I have tried it with tos206 img, and a foriegn<?> tos 1.4 img, going
to try and get a 1.62 img today...

>or try my page (supposedly faster)
>
>http://www.iol.ie/~ajankows/st/pacifist.html
>
>I have put up some new software as well as a little program by myself
>called AssiST which make configuring PaCifiST a bit easier!

Well this saves me emailing you personally, yes THANK YOU for the
assist prg, very helpfull and I use it all the time for setting the
boot disks as F10 swapping during emulation does not work for me, your
prg is very handy :)

For GEM apllications all the emulators are about the same.. but for
games IMHO Pacifist wins hands down :))), can't wait for sound?

Cheers...!ynoT

Nope!
You have to *buy* it. TOS isn't public domain.
In fact I believe the rights to TOS have been bought by C-Lab or someone
from Atari.
Contact your Atari dealer for prices etc.

>Sherlock Holmes? I never heard of that one by Infocom. I only have the
>other three from the Infocom CD collections and I am keeping those.

It was called "Sherlock: The Riddle of The Crown Jewels" - and it
should still be available on Lost Treasures of Infocom II or the
recent Masterpieces of Infocom CD. Check out the Activision home
page for more details. There's no Atari specific interpreter on
this CD so you'll need something like JZip to play the game. You
can get this at ftp://ftp.gmd.de/if-archive/infocom/interpreters/zip/

There are many more adventures on this site, many written with
Inform or TADS, all playable on Atari machines. Have fun!

IF GOD IS LIFE'S SERVICE PROVIDER WHY HAVEN'T I GOT HIS I.P. NUMBER ?

# 4337. MagiC hate page: ASH's "antwort"

Newsgroup: comp.sys.atari.st
Date: 1997-03-03 00:00:00 UTC
From: josk@ifi.unit.no
Message-ID: <5fe5je$ej4@due.unit.no>
Source record: 126522

I just had a look at ASH's homepage, and found their answer to Draca's "MagiC hate page". One of the first things I noticed was that ASH accused him of piracy, the "evidence" was that he had changed the system-font!

The interesting thing is their answer to Draca's statement about MagiC's (Version 4) poor stability:

"This problem occurs in MagiC 4.0 because the buffer for drives is too small. If someone has a lot of partitions/drives it happens that the system stack gets an overflow. It can be changed in the MagX.INF file. It is fixed in later versions."

(The strange this is that they state that MagiC 5 has the same problem...)

This is interesting, because when everytime I've seen this discussed in this newsgroup (Mostly about MagiC being unstable on Falcons.) one of MagiC's developers tells us that it's the Falcon that's faulty, not MagiC. Finally somebody has admitted that the problem actually exists!

They also claims that the long (Extremely long.) bootup only occurs on Falcons without IDE-drives, and that MagiC does not look for a boot-drive (I guess they mean boot-floppy because that's what Draca talked about.). So why does MagiC wait forever if there's no floppy in the disk-drive? This is very annoying, as I (And I guess most people) doesn't like to have a floppy inserted when I power up my Falcon. Viruses is no longer a problem, but disks may be trashed if they're inserted when the computer is swithced on. At least my STE did this a lot.

The last thing I have to comment is ASH's answer to Draca's problems with MOD-players:

"MOD file players modify the interrupt level. That causes an NVDI problem.With NVDI preset the interrupt level can be changed."

Perhaps, but I have no problems with MOD-players except when I use MagiC. N.AES+NVDI is fine, Geneva (Demo.)+NVDI is fine, TOS+NVDI is fine, MagiC+NVDI doesn't work, MagiC doesn't work. It's not NVDI's fault, it's MagiC's DSP-handling that's buggy. Stuff that writes directly to the hardware generally works fine, if they use xbios to access the DSP it's a lot more unstable.

The rest of ASH's answers was generally sensible, except for a couple of arrogant comments ("Blame the application then.", "Right, forget Prism Paint.").

The MagiC Hate Page is located at http://www.orient.uw.edu.pl/~conradus/docs/maghat.html, while ASH's answer

can be found at http://members.aol.coom/ashinfo/mhate.htm

From: bjr@Edison.EbiCom.Net
Message-ID: <5fdusa$cvt@einstein.ebicom.net>
Source record: 126526

Aloha...
I recently aquired a Lexmark Color printer with a PC I got for my
wife. I'm wondering if this can work on a Falcon...
I've no idea what "printer language" this thing uses...as the only
docs that came with it was a tiny little plug and play phamplet for
hooking it to a windows PC. It is a desk jet type printer so maybe with
luck it'll work under Bubble Jet or HP Desk Jet drivers...just wondering
if anyone has made it work...
BTW, I do have both NVDI 2.5, and Speedo GDOS...

Thanks,
Brian

# 4342. Best way to network Falcon & PC

From: bjr@Edison.EbiCom.Net
Message-ID: <5fe18g$drq@einstein.ebicom.net>
Source record: 126528

Hey guys...
If you don't have the manual for version 2.00 or higher...
I suggest you just buy the upgrade from Stienberg for $99 plus shipping.
It is the complete upgrade from version 1.?? to 2.06, includeing quite
a bit of extra docs (for all the added score ability, new functions to
DSP mixing, and new things in the off-line sample editor. So far,
it's the only way I can find to get everything, and make it work!
I've been beating around the net for months now trying to get
a working 2.06 version with no avail, so I'm ordering the complete
upgrade so I know I've the correct MROS, Score Module, Mixer Maps, and
so on. Plus, It'll be nice to have docs to all the new stuff. I don't
like having to blow over a-hundred bucks to do this...but I guess everyone
out there who has upgraded from version 1 to version 2 has had to do this
in order to get the docs (unless the copied it from a friend).

Good luck...
And if you'd like the number to order the upgrades from email me and
I'll look'um up for you (they're hidden away in my studio at the moment
or I'd be posting them now). This upgrade requires you to send them
your serial number if you can find one (mine didn't have one because I've
upgraded it over the net several times [at least "I" couldn't find it]) or
fax an image of your manual, dongle, CAC, or some other proof of purchase.

Brian

MiNT and MiNTnet is currently the only option if you want to use TCP/IP
and/or ethernet. MiNTnet has drivers for several ethernet-cards, you can
also use NFS. There is a ethernet-card for all Atari's (Connected via
the SCSI/ACSI-port.) under development, it's supposed to
have drivers for TOS/MagiC and MiNT. Also, STiK 2 is under development
with possible ethernet-support. But right now MiNTnet is the only
(practical) solution.

: has a LAN port on it...is there a way to make this talk TCP/IP via null
: cable straight to the PC?

Perhaps you can connect the Falcon's LAN-port to one of the PC's
serial-ports? You'll need a special cable though, the easiest way is just
to get a modem-cable for Mac and modify it slightly. But why do this,
normal PC's can't go beyond 115200 anyway so why not just use the normal
serial-port?

>empty, ICD's RateHD gave rates up to 1063 K/s at 19ms. After copying back
>all the files, RateHD reports about 150 K/s at 17ms.

I've noticed the same thing on several 2,5" IDE drives on Falcon. I don't know
if it is the rate programs or something else. But it still seems like it isn't
that slow during the actual use, but it is really a bit annoying after seeing
the results. I wouldn't really worry about it too much

Take Care, Miika

Very few games are the work of only one person. If what you say is true, only the code rights would return to the programmer. assuming there is only one, which often isn't the case. Most companies reuse their routines, which make them the property of the company. You would have also have to contact the graphics artist(s), the music composer(s), the scenario writer(s), the animation animator(s), whatever, etc...

Besides, when you work in a company you usually sign an agreement to lose all your rights to inventions, creations, etc, that all become irrevocable property of the company.

I sincerely doubt the programmer has the rights to an entire game. If a company ceases to exist, the rights are usually bought by someone or given away to the guys the company owned money to. Most of which don't even know what an Atari is.

# 4349. Strange problem on a Falcon

Newsgroup: comp.sys.atari.st
Date: 1997-03-03 00:00:00 UTC
From: Julien BARRET <96193416@brookes.ac.uk>
Message-ID: <331AB6F5.C6A@brookes.ac.uk>
Source record: 126534

I have a strange problem with GEM objects redraw on my Falcon.
When my Falcon is cold, Sometimes (i.e not every times, but quite often)
it stuck while drawing GEM objects (e.g menus).
For example when I play to triple yahoo, it fails while drawing the
dices after a roll. Or when I use WinRec, it stucks when I open a menu,
or when I run a program it strucks while drawing the menu bar.

But this do not occurs each times! I mean, it could perfectly works for
5 minutes and then crash.

But all the problems disappear after 25/30 minutes and then the computer
works perfectly.

Do somebody have an explanaition ??

Actually my Falcon is fitted with a 40Mhz speeding card (Centurbo 1) but
all the problems decribed above occurs in both modes (16 & 40Mhz).
A friend of mine told me that my problem was due to a ROM communication
problem... is this possible ? How can I fix it ?
I tougth about speeding up the ROM access with the little hard patch
which consists of strapping two solding point on the left part of the
mother board (just below the extension port).

IS this could be a solution ? Or is this could create even more problems
?

Thanks for any help or advices.

Julien.

If I was an author, I would not accept to see cracked versions of my programs floating around. Who can guarantee that the code hasn't been tweeked to make the game easier, change text inside it, cheat modes, etc ? Those things are part of the game, and that would be, for an author, like painting moustaches on Mona Lisa and saying it's Leonardo Da Vinci's painting.

>>Or how about cracking original copies ourselves - it isn't that
>>difficult.

>

I don't see what difference there is to the above. Who can guarantee that you haven't messed around with the rest of the code and changed the performance of the program. If I was an author, I would certainly not give any kind of authorization to hack the code.

>>I was employed for a short while to remove protection from

As I said in a different thread, the programmer is not the only owner of the rights. You should also have to contact the authors of the various routines used in that particular software company, the authors of any text files, the artwork designers, the music composers, the sound FX guys. They have at least as much rights on their work as the programmer, don't you think ?

Or you can simply edit the NEWDESK.INF file in a text editor to get rid
of out-dated file references, icons no longer used, etc. What happens
is that every time you save some change to the NEWDESK.INF file, it
appends that information change so you wind up with a larger and larger
file. Pare it down! You can still have lots of icons on the desktop,
just edit the darn INF file! Good Luck!

>STOS the mouse/keyboard don't respond...
> A: ?

Get 'Generic STOS Fixer' from my WWW pages, and fix it with the default version as your TOS version. This should solve all problems relating to the mouse not working, unless I do not have a DEFxxxx.DAT file for your OS version, in which case contact me.

If STOS (editor or compiled program) crashes with a bus-error (2 bombs) imediately on startup, it may be possible to fix it with my new version of STOS (either replace the basic206.prg for the editor or re-compilation of program). This is currently in beta, and may only be obtained from my WWW page.

(the address is: http://www.cs.man.ac.uk/~jacquesa/stos/ for the STOS pages)

FYI the bus-error is caused by a dirty way of identifying the OS version which doesnt work with a TOS 2.06 image file in gemulator. This is of course patched in my STOS 2.07beta2...

It's not possible that you have scsi termination on both the SLM controller
and on your harddisk is it? Your symptoms would be about what you are
encountering (ie only the first device in the chain tries to work.) I
haven't followed this thread so maybe its already been suggested though.

>authorization to hack the code.

You don't hack their code, you hack the protection out. Big difference.

>As I said in a different thread, the programmer is not the only owner of the
>rights. You should also have to contact the authors of the various routines
>used in that particular software company, the authors of any text files, the
>artwork designers, the music composers, the sound FX guys. They have at least
>as much rights on their work as the programmer, don't you think ?

Actually no; generally the company will own the rights and the programmers will
own nothing. Case in point; Jon Ritman, author of a fair few Spectrum games, is
quite happy for people to copy his Speccy titles, but then again, as he says,
he doesn't own the rights to them. The company he wrote them for does. So you
don't have to contact a number of different people to get permission; just the
company.

>> Regards from STEve & his nice warm cosey PAK'd MegaSTE.

m> I think you are a bit confused about DEV_FPRN.DEV all you do is put
m> it in the auto app or what ever in the magic set up and forget it.
m> Print out using your normal nvdi print driver.

I actually use the Pap drivers.

m> This is actually faster than outburst. I tried doing what you are doing
m> and nothing changes.

m> This is really a print routine fast code patch like outburst.

OIC, i'd never looked at tha aspect, must do some further test's.

So does it just hook into the NVDI driver output, or any Printer outout via
the OS. Would there be any advantage to my switching to NVDI printer driver
instead of Pap's own driver.

m> Try it. I use a TT with MagiC 5 NVDI 4.1.

Hm!, not bad, similar to my setup.

>a dynamic IP address. Anyone know the proper procedure to grab the IP on
>login? Thanks for any info.

No doubt others will be able to help more exactly but there are three
basic sections to sort out. From DIAL.TXT ...

```
execute:
init
cwait 1000 "OK"
dial
cwait 25000 "CONNECT" "BUSY" "NO CARRIER"
cwait 60000 "gin:" "NO CARRIER"
wait 1000
send "swampdog\r"
wait 60000 "word:"
wait 1000
send "ye_olde_password\r"
wait 60000 "ocol:"
wait 1000
send "ppp mru=576 idle=1200\r"
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
```

This bit will have to be solved by asking his ISP.

```
wait 60000 "HELLO"
```

And from STARTUP.NOS ...

```
ip addr [0.0.0.0]
^^^^^^^^^^^^^^^^^
```

plonking in a zero address makes Nos negotiate but it can take a
while.

```
# Attach the SLIP driver to the serial port
# if port 0 slip dev buff mru baud
# --- ---- - ---- --- ---- --- ----
attach asy AUX: 0 ppp sl0 32767 576 19200
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
```

and this line needs changing from slip.

The newer Nos's from http:/www.interware.it/users/mike/pub/ may be
better than Nos 0.42 at dynamic negotation. Can't remember!

As far as I know, the PostScript module for NVDI only allows the use of
PostScript fonts. I'd love to be corrected, but I'm pretty sure it
doesn't allow actual PostScript output. If it did, I'd have a hard time
not purchasing the module.

It all depends on what machine you have. As I happen to know that you
own a ST :-), the only program I can think of is SPEED OF LIGHT. This
program, when registered, is able to scale JPG files. A snag is that
it only saves as a GIF, but there are other programs that can convert
GIF to JPG again (f.i. Trupaint).

Just download the prog somewhere and try it out, maybe it will do the
trick for you, the latest (last??) version AFAIK is 3.8 (April 1995).

>works perfectly.
>
>Do somebody have an explanaition ??
>

It looks like a cold joint problem, that means, one of solder points or
one of chip socket contacts is intermittent and only works properly when
it's warm.

>Actually my Falcon is fitted with a 40Mhz speeding card (Centurbo 1) but
>all the problems decribed above occurs in both modes (16 & 40Mhz).

That's the first thing to check, perhaps :)

>A friend of mine told me that my problem was due to a ROM communication
>problem... is this possible ? How can I fix it ?

I'd try to re-sit TOS chip first (it's under memory board) and check all
the solder joints of its socket. But the problem could be elsewhere :(
Falcon has got a multi-layer PCB and it's nearly impossible to trace the
tracks without a maintenance manual.

>I tougth about speeding up the ROM access with the little hard patch
>which consists of strapping two solding point on the left part of the
>mother board (just below the extension port).

Tell me more about it:)

>
>IS this could be a solution ? Or is this could create even more problems
>?
>
>Thanks for any help or advices.
>
>Julien.

Due to its intermittent nature the problem might go away just after opening
the casing and come back later :( but it's possible to deal with!
Wish you luck!

I wonder if the old UltraScript would do the trick? Do you have a TT or
an ST?
Seems to me, the trick was to take the Ultrascript driver and after
disabling your normal driver, you rename the UltraScript driver to the
name of your output device (i.e. UltraScript.SYS file to HPLJ.SYS or
whatever). You can then print from a GDOS application which creates a
PS file which can then be printed via Ultrascript. Matter of fact,
wouldn't that also work with Ghostscript, which is more up to date than
Ultrascript? Check out Ghostscript - should be in the umich or hensa
libraries etc.

# 4381. GFA 3.5 / TSR / pterm res

Newsgroup: comp.sys.atari.st
Date: 1997-03-03 00:00:00 UTC
From: mazzeri@foxvalley.net
Message-ID: <mazzeri-0303972032200001@ttyc6.foxvalley.net>
Source record: 126566
Cross-posted to: alt.atari-jaguar.discussion,alt.binaries.atari,alt.binaries.atari.d,comp.sys.atari.st

Help... ;)

I need help writting (a little) a GFA basic TSR...

I know what to do for most of it, but I need help on some weirder concepts...

If you CAN help me PLEASE email me so I know to come back to this newsgroup...

I am going to write a small auto folder .PRG that will install itself to run when the interrupt for MIDI IN port is generated... What I need this program to BASICly do is...

act as a MIDI THRU when I'm NOT running my music software.... In other words when I'm online w/ the computer and I wanna play my midi rig it'll be waiting in the background for MIDI port input... then it'll grab that vector and take the byte that's in the MIDI IN port and send it to the out unchanged... It's a TSR... I don't want an ACC...
Also I'd like a hot key combo to make it go DORMANT (set vector back to normal) and watch they keyboard for the hotkey combo again to come back to ACTIVE...

I need to know if it's is possible to READ the MIDI in port WITHOUT clearing the byte read? So that after I run my THRU routine I can branch back to the system's routine... Or would it be more wise to just use my own routine all together?

Also in GFA manuals it CLAIMS that you can NOT use pterm resident... Is this due to the effect that it woud have on the interpreter? I mean if I wrote the program WITH the pterm res call in it... and did NOT run it from WITHIN the Intrpreter, but compiled it instead... Would it work then? or do you know if the compiler would filter out the pterm res command when it did it's thingy?

Also I need clarification on the whole cookie thingy... The one in the basepage... Do I set that when I install my prog? And it's 8 bytes right? 4 for ident and 4 for address right? and the first four are for WHAT? and the second four is WHAT address? The original address that the vector I robbed points to? If my prog were to crash would TOS take that address and poke it back into the vector I robbed?

(here I catch my breath...)

Thanks,

Luke.

# 4383. Eureka a graph describer and 3D modeler

Newsgroup: comp.sys.atari.st
Date: 1997-03-03 00:00:00 UTC
From: lecoat@chronos.ief-paris-sud.fr
Message-ID: <5feh8c$kaq@upsn6.u-psud.fr>
Source record: 126568
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

Hello everybody,

I'm a french developper working on a program called Eureka 2.12.
It's a 2D numerical analysis program, and a 3D modelling of
mathematical shapes. It also includes 4D presentation, because
a time parameter is available. It's quite easy to make movies
showing the evolution of a formula in 3D rotating, morphing from
a shape to another etc... Data files can be loaded so that you can
manipulate series, or even stereo/mono sample files manipulating
sounds. Images can be produced, computing them with formulas to
draw fractals such as Julia or Madelbrot sets. You can even map
these images on a 3D surface, producing impressive representations.
Since recent revision of my program it is now in two languages
French and English. The english translation of the documentation
will be soon available. My goal is to make a program like some
on other platforms such as Mathematica or Matlab. It has been
tested with success on MAGIC, TOS2WIN, STonX and MAGIC MAC/PC.
There may be remaining incompatibilities that I wish users to
tell me about. So don't hesitate to mail me ...
My work is a complete package including the program and some
accessory like a snapshot, an unusual recording accessory that
allow you to demonstrate the program like a mecanical piano would
play Stravinsky (?). There's a program that can show your movies
etc ...
The latest english version is available on my home page at :
http://www.ief.u-psud.fr/~lecoat/
That page is mainly illustrated with my program so that you can
see what is possible to do. Eureka has 3D2 Raw and VRML exports
so you will see Virtual reality demonstrations of objects, and
movies or images produced with Persistence Of Vision.
The latest revision will also be available soon by FTP on the
"Conservatoire National des Arts et Metiers" at :
ftp://ftp.cnam.fr/pub/Atari/Applications
Anyway for any problem report in my mailbox at :
lecoat@ief.u-psud.fr
Any suggestions are also welcome ...
Have fun with my production, bye for now ...

Hello,

I have a real collectors piece here. A new Atari PC4 IBM PC for sale.
PC comes with all original books, disks, and box.

Atari PC4 PC
Serial Number : 124 <-Yes #124 not too many around
286-16 CPU
Two video ports (analog and digital) for MDA, CGA, EGA, and VGA graphics
1 Meg of RAM expandable to 8 Meg
32 Meg hard drive
1.2 Meg 5 1/4" floppy
Has Atari labeled MS-DOS and Windows
Atari Keyboard
Can use Atari ST 3 1/2" external floppy drives.

Unit is new and in great condition and works fine. Asking $150 or best offer.

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

Or, if you are MS-brained, DLL = "Dynamic(ally) Loaded Library".

Either way, it amounts to (almost) the same thing.

My TSR is called "The Toolbox", and I've been working on it since 1992.
It became extensible in 1994, and the ability to dynamically load a module
was added quite recently (previously all modules could only be loaded at
boot time).

It was originally designed as an OS-level library of callable code,
then it became a library manager.

It was all written in assembly language, using Devpac 1.25 (from an ST
User cover disc) and now Devpac 3.1 (from Hisoft)

At present, there are some bookkeeping problems with using it in a
multitasking environment (primarily when multiple apps are using one
dynamically loaded extension). It works OK under MTOS with memory
protection.

It requires TOS 1.0 or better, and about 32k of RAM. It works best when
loaded before MiNT, and was designed for the GEMDOS file system, although
it works moderately well when using minix file system under Mint.

I've designed it to have only one instance of any particular extension (based upon a "cookie" identifier within the extensions ID block).

I'm torturing the current version - as well as mulling over the exact format of the extension/toolbox interface. The "calling the extension" is fully working, but the extension ID block needs work.

There is a built-in limit of 16 extensions loaded simultaneously - but this limit will be raised soon.

It lacks RPC functionality, though. I'd like to add that later.

It still has an assembler level interface in terms of the startup code, and I haven't tried to make it "Lattice Friendly", so you can write extensions in a higher level code (you'd need to make a few changes to the startup stubs and initialisation code, as well as setting the base register [generally A4] on entry to any funcs that needed it when using a base-relative compiler mode).

If you are interested in taking this further, I'll start a "Toolbox API" thread in c.s.a.p and we can nut out the details to form an "open" standard calling protocol.

Message-ID: <331a3204.21739247@news.demon.co.uk>
Source record: 126612

I have an SLM 804 and an SLM 605 that are taking up space.....

I'd give them away for a good, non commercial excuse....

Cash would also be a good excuse, but I'd prefer they went to a good, useful home, I'm not necessarily trying to make money out of them.

Both of them are in reasonable condition, when last used they worked ok but as a designer it wasn't good enough and they could both do with another service.....

E-mail me if you'd like to make an offer or know more......

I also have an integrex colour inkjet, with printer driver and quite an extensive collection of STFormats, STUser and STReviews, with or without disks, that are taking up a similar excess of space.....

You can purchase the 4 meg ram upgrade kit from Toad if they
still sell them. I upgraded my old 1040 last year, but it cost over
$300 for the kit and chips. I have since sold the computer for next to
nothing since I don't use it any more. The upgrade is very tricky to
install. You might look for a 1040 already upgraded to 4 megs.

*Nothing* is 'normal'. Even expecting people to use a non-proportional font is wrong these days, though I wouldn't worry about it.

>You don't need the TOS card, although it's handy.

So what if I want to run TOS 1.2 on it? Or any one except 2.06?

> And to concentrate on
>GEMulator was caused by the fact that A) It's said to be the best and B) I've >got one. Does "least accessible" by any chance stand for "least easily >pirated"? <grin>

No, it means you have to pay for some hardware. Pacifist and STonX are *free*.

>Please supply me with details and it'll be mentioned next time.

Okay, will do tonight.

>Er...could you be a bit more specific?

When I get some time, hopefully tonight.

>I see. Er, that doesn't help GEMulator users much, does it?

So get PacifiST :)

>Is IMGBUILD freeware or shareware? Perhaps you'd care to share it with us if it >is? I think it might work with GEMulator too..

Freeware, it's by PacifiST's author. I forget the address of his page, but there are a number of threads that mention it.

>When my English agent wanted a more impressive name :-)

Reminded me of APL which was apparently going to be called TPL until the author got cold feet...

1. You're wrong. Atari bought JTS Technologies, not the toher way 'round.

2. JTS Technologies now owns the copyright to TOS and the Atari version of
GEM.

3. Your request for pirated software in a public forum, in violation of US
Federal law, has been noted. Your postmaster has been notified, and if he
fails to terminate your account, he then becomes an accessory after the fact
to "conspiracy to defraud" which will end with JTS Technologies owning
li.net, and him in prison.

Have a nice day.

Yes, it's called MS-DOS. <G>

Seriously, the only difference in format between the stock TOS-formatted floppies and the DOS-formatted floppies is a pair of bytes in the boot sector (Sector 0, Track 0 in case you are curious). Just format the disks to 720k on the PC and the ST can read and write them with no trouble at all (assuming the ST ahs a DSDD drive - if it happens to be single-sided, format to 360k).

If it's a choice between seeing them steal a copy of TOS, or going to the PC and steal from MicroSoft... Well, I think you see where I'm headed.

However, the important point is that there IS an emulator that works just fine without a stolen (or even legal) copy of TOS, and that's TOS2WIN. It does require that you learn a dozen words of German in order to use it to best advantage, but if you haven't that much learning capacity, you won't be able to keep Win95 working for more than a week anyhow.

>didn't show the file at all. Mucho thanks tho' !!!

You're welcome!
I tried to do a search as well, but as you I didn't come up with anything.
I guess it was because the file probably wasn't called "thing" or "thin",
but "thng" as above.

That's when I did a search using Hensa's Gopher. Apparently Hensa is still
updating files! I believe Denesh (of Hensa) announced some time ago that
all support of the Atari ST section would cease. Apparently not :-)
Anyway, glad you were able to download it. It's a great piece of software!
Seems like it's definitely worth registering (DM 25/UKP 13 I believe).

>saying so lets stop him hey ??????...

Not at all. I have no interest in WHAT he's saying per se - what I object to is the use of this newsgroup, /in clear violation of the charter/ and also in violation of the terms of service of all reputable Internet Service Providers (and even AOL), to solicit assistance in committing software piracy. I object to piracy in principle, but I also recognize the impossibility of stopping it when done through private communications. Howeve, when it is attempted in /public/ communciations, I will (and have) vigorously pursue all options to have the offender removed, in whatever manner is most financially painful to him.

What anyone does in private (as long as I and my intellectual property are not involved) is none of my business. What is done in public is everyone's business.

SCSI Tools, HUshi, CD Tool and HD Driver all work on the T60.

DynaCadd runs as well.

The article was missing an addendum that was sent later. It covered
the early compatibility problems that the author had missed including
confirmation that Geneva and MiNT run now.

All the best,
Chris @ Computer Direct

Hi,

Geneva and ExtenDOS work exceptionally well on the Hades. MagiC not
at this time. MiNT yes! And of course Linux works now too.

Just my three cents (Cdn.) worth. ;-)

All the best,
Chris @ Computer Direct

According to the w3 pages of medusa the German version of Geneva works
with the Hades, so I don't see the reason why the English version
shouldn't work. Metados should work but with some problems.
If one use MiNT with N.AES it is possible to do multitasking.

From: greg_evans@delphi.com
Message-ID: <ZhK5JVt.greg_evans@delphi.com>
Source record: 126445

Basically your setup sounds the same as mine, except I use HSMODEM7 and Geneva/Neodesk. Do you have the JPEG overlay installed? It should be in the same folder as CAB. O yeah, one other difference is MGFTP _never_ works for me -- doesn't get along with Geneva too well -- can't even find its RSC file. Hmmm, the only thing I can think of is the JPEG overlay file. If STiK is working and its various client programs are too, it has to be in CAB. Check each configuration menu item and make sure you have entered choices in each if the fields.

Greg

# 4426. Thing icons

Newsgroup: comp.sys.atari.st
Date: 1997-03-04 00:00:00 UTC
From: skr@dcs.ed.ac.uk
Message-ID: <E6IyDI.1u3.0.staffin.dcs.ed.ac.uk@dcs.ed.ac.uk>
Source record: 126451

How can I edit icons for Thing?
Ideally, I'd like to be able to dwonload a new icons.rsc file and play with it.
Can anyone help me out here?

# 4427. Re: Newdesk.INF > 4096 bytes ?

Newsgroup: comp.sys.atari.st
Date: 1997-03-04 00:00:00 UTC
From: Goetz_Hoffart@ka2.maus.de
Message-ID: <199703042135.a49095@ka2.maus.de>
Source record: 126452

MP>Has anyone found a way around the 'System out of memory' bug when
MP>you've got a Newdesk.INF file that's bigger than 4096 bytes ?

Yes. Use GEMRAM (which loads GEM from ROM to RAM) and SHBUF (a fix for your
4096 byte problem) and (best) WINX 2.3n (multiple window manager with shading).

But: GEMRAM needs a lot of RAM because it loads the complete AES to the RAM!

Goetz

# 4428. Re: connecting falcon scc port to st rs-232 via null modem cable

Newsgroup: comp.sys.atari.st
Date: 1997-03-04 00:00:00 UTC
From: Goetz_Hoffart@ka2.maus.de
Message-ID: <199703042151.a49097@ka2.maus.de>
Source record: 126453

FJ>Parallel port (printer port) is bidirectionnal on Falcon but not on
FJ>1040 STFM.

Beeeep - wrong. The PSG can be programmed either as an input or an output device. I had a sound sampler at the printer port of my 1040STF and it worked.

Goetz

# 4429. Re: MagiC hate page: ASH's "antwort"

Newsgroup: comp.sys.atari.st
Date: 1997-03-04 00:00:00 UTC
From: Goetz_Hoffart@ka2.maus.de
Message-ID: <199703042146.a49096@ka2.maus.de>
Source record: 126454

JES>They also claims that the long (Extremely long.) bootup only occurs
JES>on Falcons without IDE-drives, and that MagiC does not look for a
JES>boot-drive (I guess they mean boot-floppy because that's what Draca
JES>talked about.). So why does MagiC wait forever if there's no floppy
JES>in the disk-drive?

Wrong. MagiC checks for the IDE drive, not for the floppy. There is a patch for Falcons without IDE drives, called MPATCH.

JES>Perhaps, but I have no problems with MOD-players except when I use
JES>MagiC. N.AES+NVDI is fine, Geneva (Demo.)+NVDI is fine, TOS+NVDI is
JES>fine,

Because MagiC has a totally preemptive (sp?) multitasking. MiNT still uses the old GEMDOS.

JES>Falcon that's faulty, not MagiC. Finally somebody has admitted that
JES>the problem actually exists!

It exists. But my Falcon had this problems even without MagiC. It is a really ugly designed machine (just think of the weird 16 bit memory interface to the CPU) and a lot of Falcons I know had hand-soldered ICs on the mainboard - soldered by Atari to fix problems (with SCSI, the DMA, the video ...).

Regards
Goetz

# 4430. Re: How much should I pay for a ZIP dri

I'm not sure if the Jaz has these features or not.

> What are these features? And would they tip the
> balance in favour of Iomega over Syquest for you(or anyone)?
> thanks.merci for any info

Basically they are simply Passowrd protection for Read/Write or Read
only mounting of the drive which is built into the driver software.

FREEWARE from Probe House Software !

PH Player (version Feb23) now supports even more sound format with
the inclusion of Soundblaster VOC and Amiga IFF sound format auto
recognition.

- WAV, AU, SND, AVR, AIFF, VOC, IFF and raw sound format.
- 8 bits & 16 bits
- u-law, a-law, PCM linear.
- all popular playback speed including 44.1 KHz.
- Multitasking aware.
- drag & drop.

Get it from:
http://www.geocities.com/SiliconValley/6880/phsw.html
Both text & graphical pages are supported!

# 4433. Line drawing (Graphics) fonts for TelVT102????

Newsgroup: comp.sys.atari.st
Date: 1997-03-04 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <5fg33b$ngl@alexander.INS.CWRU.Edu>
Source record: 126475

Somewhere, somehow there must exist some kind of Vector font of the
special set known as Line drawing. This set is NOT a set with the high bit
graphics chars as found in ANSI fonts. This is a special set with line chars
in the place of the lower case chars called by ss1/ss2 in terminal mode for
VT102 operation. Does anyone know of such a thing??? I need it to work
with the brand new VT102 telnet (TelVT102) I am about to release. I have
a bit-mapped .FNT set, but would like a vector set if i can find one.
Barring finding one for the Atari, What non-Atari fonts can be used???
There are so many terminal emulators around, surely someone has written one.

The JAZ offers the same read/write protection features as the ZIP does.
This means that tbe software coming with HDDRIVER can be used on the JAZ
as well as on the ZIP for changing these settings.

>>authorization to hack the code.
>
>You don't hack their code, you hack the protection out. Big difference.
>

Not really. Most of the time protection routines include disk read routines, some of which are faster than the original rom routines. In this case your hack will affect the game's loading speed. This is just an example, but protection is definitely part of the code.

>>As I said in a different thread, the programmer is not the only owner of the
>>rights. You should also have to contact the authors of the various routines
>>used in that particular software company, the authors of any text files, the
>>artwork designers, the music composers, the sound FX guys. They have at least
>>as much rights on their work as the programmer, don't you think ?
>
>Actually no; generally the company will own the rights and the programmers will
>own nothing. Case in point; Jon Ritman, author of a fair few Spectrum games, is
>quite happy for people to copy his Speccy titles, but then again, as he says,
>he doesn't own the rights to them. The company he wrote them for does. So you
>don't have to contact a number of different people to get permission; just the
>company.

And that's where the problem is. When the company has gone under, the only person you can contact is the programmer. What if the guys who worked with Jon Ritman at the time were against free distribution of their artwork or music or whatever else ?

I suppose you can always state that you will withdraw the program from the FTP under any request from people listed in the games credits (assuming these haven't been edited by the game's cracker), but that won't protect you from being prosecuted. After all, you don't know how many free copies have been distributed.

Don't get me wrong, I support the idea of setting up an FTP of old commercial games. I'm just trying to work out how it could go wrong.

>
>Greg
>.

I think that Chris had said that with the Hades they use
HD Driver. I have Hard & Softs CD Tools which will operate
an IDE CD Rom on the Falcon so it may work on the T060 as
well. Both HUSHI (the driver) SCSI Tool and CD Tool are a
very complete package. However it is all in German. If you
are use to TOS/GEM, it is not all that difficult to understand.

Has anyone ran Dynacadd on the T060? I just tried it under
MagiC Mac and it works fine, but even on the 040 machine
it takes around 15 minutes to load an Autocad DXF file in
the 10mb range.

Yes, the Current Notes article was very impressive (so is
the machine:).

Mike

I think I understand Guentcho, and I surely understand the first person,
and what he is saying (or doing depending on your viewpoint). He is
stiring up some shit, requesting the images first of all.
Anyone who reads the group has seen all the postings concerning this
issue. His response was to post a site that probably has an image
for download. I have seen a few lately with the images burried inside
a couple of pages of personal bullshit (you know who your are).
Now after he gets his image, he'll be back here wanting more info
on what app is best under Gemu... ect. Well you know what,
"I don't care the fuck" either. By the way, using "care the" instead
of "give a" will cause you great problems when you try to read the
Gemulator instructions.

Mike

# 4441. STik and IP address

Newsgroup: comp.sys.atari.st
Date: 1997-03-04 00:00:00 UTC
From: mgrove@owens.ridgecrest.ca.us
Message-ID: <5fgn5k$3qu@ash.ridgecrest.ca.us>
Source record: 126483

I noticed that when changing resolutions while on line
my modem does not drop carrier.
I recorded the IP address that the server provided
and re-entered it into STik after a resolution change.
I was able to start Newsie again without having to
logon again.
As the IP is different each time I connect, I was thinking
that an accessory or app that could catch the inital IP and
STik (pun:) it back into whereever it is suppose to be would
be nice. That way 16 color speed and text and 16 bit
(Falcon anyway) for pics would be an easy option.
Any ideas?

Mike

Look here for speedtest.zip. Inside there are a few Falcon
only utils, but an app called Howfast will give you a better
idea of how your drive is performing.

ftp.ridgecrest.ca.us/users/pub/m/mgrove/
in the Falcon directory is where you will find the file.

I did this with my STe. You need a cable with a male RCA plug on one end
and a male "cable" RG xxx connector on the other end. A normal US cable TV
plug, in other words. Thats if your TV is cable ready, or has a 75 ohm
input jack. If not you will need a 75 ohm -> 300 twin lead adapter.
Your best bet is to just get a monitor. A TV looks horrible :-)

Interesting. The Mighty uses a VDI patch to install the fast ram, but
even then
if NVDI is not installed, you can expect instant crashes in TC mode and
even hard
disk problems (FRB is installed). Does the 68040 driver patch TOS or
does it just load
the fast ram with a magic D.Little app:) Is the fast ram address the
same as on the TT?
```

> Mike

Well again, I don't care the fuck (whether this may be good English or not,
I don't care, it's probably better than your German would be, isn't it?)
Moreover, you are dead wrong, I don't need any tos image myself (I even own
an Atari and legal tos roms), nor do I need any good advice as to getting
Gemulator and the like working... ha ha ha... No problem at all (reading English
instructions is nothing but a minor challenge, but there is no problem at all,
it is real fun and easy for me).
I use Gemulator96, Gemulator Classic, Pacifist, and I do not need any info;
I could rather give some people useful hints.

As someone already mentioned before here (I do not remember who), the
whole discussion about legal aspects of tos roms appears to be paranoid
nowadays. That is what gets me angry and ready to utter the opinions of
many, many here (be it formally legal or not).
If you wonder who I am (obviously anonymous), I can tell you:
Using a public computer pool, there is no need to change the default
identity in this publicly accessible newsreader, I just start the program
and post, that is all.

Enough now, whatever shit some idiot may answer now, flaming me, be informed
that I will no longer reply, I just don't give a damn...

From: Jelcke de Boer <link@tpa.demon.nl>
Message-ID: <331C0EDB.2C3F@tpa.demon.nl>
Source record: 126496

Hello to you all,

I've got this great fixed frequency monitor and I've got it working
under win95.
But the only problem remaining is that every time I switch to montor on
and off
the vertical position of the image gets displaced.

I have to reposition the screen image with the internal\external sync
switch on the back of the monitor.

The monitor is a MONITERM model CD19

I use composite sync at the moment but I think sync on green could also
be used
(internal\external sync switch?)

Does anybody know this monitor and\or give me advice on how to avoid the
displacement
of the image and does anybody know how the internal dip switches work ?

A lot of thanks in advance,

Jelcke de Boer (link@tpa.demon.nl)

Yo!
You don't need TOS system disks it's on ROM(ulen).
There was a 'language' disk provided. I could uuencode it and send it off to you.
but before you do anything, check out and read the faq's, which you can get from:
http://home.sn.no/~hallvart/pages/atari.html follow the beginners software tag.

>You don't need TOS system disks it's on ROM(ulen).

Was not always true. The first STs released had Tos on disk not in rom.
If you turn the machine on and nothing appears on the screen, then you
might have one of the earlier versions of the ST and just might need tos
on disk for it. Wayne Booth

Make that all :)

> In this case your
>hack will affect the game's loading speed. This is just an example, but
>protection is definitely part of the code.

Actually from what I've seen it *never* is. It is usually tacked on the front of the game just before they release it. Several schemes took an existing PRG and encrypted it, adding a protected disk verification routine on the front. These can be removed easily enough (part of the job I mentioned previously was taking out this sort of thing). Reading protected sectors is never handled by the same code that reads normal sectors.

I had a different idea, though it would only work for emulators - patches within the emulator. When it spots a particular game it fakes the results the game expects from its protection check. Unfortunately there's still some hacking needed, and to be honest it's more hassle than just removing the protection in the first place.

>And that's where the problem is. When the company has gone under, the only
>person you can contact is the programmer. What if the guys who worked with Jon
>Ritman at the time were against free distribution of their artwork or music or
>whatever else ?

Not their say. It's the company's say, whether you can find them or not.

>I suppose you can always state that you will withdraw the program from the FTP
>under any request from people listed in the games credits (assuming these
>haven't been edited by the game's cracker), but that won't protect you from
>being prosecuted. After all, you don't know how many free copies have been
>distributed.

Which is pretty much how the Spectrum scene handles this problem. No prosecutions yet, only two companies popped up and said they didn't want their stuff distributed and as a rule people respected that.

No, don't get a Syquest drive. They are the most unreliable pieces of shit I have ever used. You have no idea how many times I have had people ask me if I can recover their lost data from those things. I have had plenty of lost work myself due to those things too. I'm not even talking about if you treat it nice or not. I treated mine like a carton of eggs and it still died. They are only guaranteed for 5 years so if it dies before that you get your money back but that's no help to the data you lost. Zip drives use an optical method and are much more reliable. Regardless, I would make sure to always make back-ups of anything on a cartridge. Don't use the cartridges as back-ups. If you need something for back-ups then by a tape drive. They store much more anyway.

If you get a cartridge, you used lower-case "c" instead of an upper-case
"C" when installing the icon - TOS is hard-wired to use the lower-case "c:"
device as a cartridge.

You don't need Extendos to use a CD-ROM and you don't need Magic or Geneva to have multitasking. I use MiNT every day and for my needs it is far better than Geneva or MagiC.

Or does MiNT not work either?

I spoke recently to someone using a CD-ROM on such a machine, so it must be possible.

I've never heard of PRHell - is that the name of the software, or of the
particular BBS you're running?

Importing the news isn't hard - but it is tedious. If you use standard
fido-style (e.g., QBBS-ST compatible) message bases, I could modify UUCP-ST
slightly to import from Newsie. It's freeware and runs under GEM so it
won't take you off-line if you're running a multi-tasker.

You may want to look at http://www.teleport.com/~atari/ac-usa.htm as well -
it isn't intended to be as comprehensive as the "official" site, but
provides information for prospective subscribers and a link to the A|G|C
site, of course (and a special "Q&A" questions submission link which has
apparently never been used).

Few of the newer "we're only in it for the money" ISPs will do so, that's
true. However, I ddin't say that anyone can use it - only that, IF you can
use shell access, THEN you can use Lynx. I'm pretty sure you have written
software, Makr, so you know what an IF/THEN/ELSE statement does. <G>

Chances are it uses the IBM Esc-2 protocols - Lexmark is a subsidiary of
IBM, I think. Look for drivers for a Star NX-1000 series (there's a 24-pin
version but I can't recall the model number) and it MIGHT work.

>
>Where can I get a TOS image to use with an emulator?

It's a 2-step process:

1. Buy a copy of the TOS ROMs (usually installed in an Atari ST computer - which go for as littel as $10 at the Goodwill).

2. Dump a copy of the ROMs onto floppy. As long as you own the ROMs, you have a legal right to use the code but NOT to give, sell, or otherwise transfer it to anyone else.

There was a ROM dump program posted here recently.

Yes, that's true. But AOL also levies a $500 charge against your credit
card if they decide you are using your account for commercial purposes, and
they consider piracy to be commercial.

I haven't done this for months, but to begin with, be sure the IP address
entered in STARTUP.NOS is 0.0.0.0 - I think there's a command that needs to
be there also to get the IP address (GET_IP$ perhaps?).

Mail order is easy - see below. For local stores, look for an Amiga vendor
(probably in the Yellow Pages under "computers - retail") - there are
several mouses which are Atari ST/Amiga switchable.

Mail order vendors may be found at:

Assuming you are referring to the little RCA phono jack, that's not direct
video, it's RF. Plug it into the antenna jack on the TV and switch to
Channel 2, 3, or 4 (don't recall which 2 of those are available but there is
a marked switch on the back of the ST).

> 2) Termination or not can also switched on the backside of the ZIP.

Termiantion can be set but not Tem power, every terminator must be
supplied power (5v IIRC) but the Zip doesn't seem to supply it and so if
you have a device such as teh Link which powers itself from this
Termination power then the Link and thus Zip will not work, if you hook
it to another HD then the power will be supplied and it will work fine.

No doubt about imagecopy 4, but there is picscan will convert img to things like bmp and pcx and it is shareware but hires only it will work with sebra.

MGIF v5 is very good and converts img to gif and it does work in any resolution.its freeware and saves img to gif87a formats, it saves a few more too like targa.

Well hope this helps

# 4485. XoR program / Profiles?

Newsgroup: comp.sys.atari.st
Date: 1997-03-05 00:00:00 UTC
From: jklimch@curly.cc.emory.edu
Message-ID: <5fjlav$qpb@curly.cc.emory.edu>
Source record: 126374

Hi Vern,

I'm not sure that mark of the unicorn supports atari anymore. However, profiles for Unisyn (the PC windows version of XOR) are compatible with the atari version. You can download current profiles from their web page (www.motu.com). I don't know if a d5 module is available. Come to think of it I'm not sure motu supports unisyn too much anymore. <g>
I use the D4 profile all the time. It's kind of limited in that you can't drag individual sounds between banks from a list like many other profiles. Instead you have to go to each note, call up a list, & change the sound. But it still beats working with the front panel. Maybe there will be a d5 profile & it will be better...

Hope this helps

I guess you mean a format that is readable with common software on an IBM
compatible computer.

You could use Paint Shop Pro on your PC, or something like GEM-View,
ImageCopy or PicSwitch on your TOS machine. There are probably heaps of
others that would also do the job.

Source record: 126378

Is anyone experiencing similar problems: I have sent email to FOUR different Atari dealers, with some very simple questions (like, "I'd like to buy such and such, can I have more information") and have had no replies from *any* of them. Is this a new trend? What happened to all that stuff about smaller companies in a smaller market being able to give closer support??

Either of Strunk's or Lindner's ports should work fine with MiNT; and they're
both command line programs. Indeed, I found them nicer from the command line
than using the GEM shell thing, as you can put files where you like.

However I'm not sure either of the previewers work well with MiNT.

## 4491. Atari games for sale (UK)

Newsgroup: comp.sys.atari.st
Date: 1997-03-05 00:00:00 UTC
From: Phil Grainger <phil@phildg.demon.co.uk>
Message-ID: <D3IEGPAxQXHzEw$z@phildg.demon.co.uk>
Source record: 126380

Offers are invited for the following Atari ST Games for sale. All are originals with manuals and boxes:

Domark's Championship manager with 1993/94 update disks
Pro Tennis Tour 2
Audiogenic's World Class Rugby
Graham Gooch World Class Cricket
Striker
Microprose F19 Stealth Fighter
Archer Macleans Pool (excellent game, similar game engine to Jimmy White's Snooker, but easier and more fun)
Anco's Player Manager
Team
Kick Off 2
Final Whistle Data Disk for KO2
Goal! (buggy, but may be of interest to someone)
Speedball 2
221B Baker St (based on the board game of the same name)
ESWAT
Turrican II
Tank Attack (Some sort of computer/board game hybrid - comes complete with
board and about 2dozen tiny tank pieces!! - Never been played...)
HKM/Impossible Mission II pack
Indiana Jones and the Last Crusade/Dragons Breath pack
Blood money/Anarchy pack (Never played them, honest!)

Offers by mail please to pgrainger@cix.compulink.co.uk

Phil

E-mail: pgrainger@cix.compulink.co.uk (preferred email address)
or phil@phildg.demon.co.uk

# 4492. Atari items for sale (UK)

```
Offers are invited for any of the items as listed below.

Software
--------
Outside - version 3.20
Diamond Edge 2 - version 2.01
Diamond Back 3 - version 3.50
XChange - version 1.5
Ultimate
Virus Killer - version 6.0
TextStyle - version 1.01
Hisoft C - version 2.03.02
Hisoft Basic 2 - version ??
Professional
Virus Killer - version 2.0b
MultiPrint - version 1.05
Address 1.6 - version 1.6
ST Basic (!) - version ??

CD's
----
Transmission (Falcon specific)

Books
-----
Concerto Manual (from past Cover Disk offer)
Introducing Atari ST Machine Code (book and disks)

Hardware
--------
Desktopper with Freekeys (this item is heavy!).

This Desktopper had one previous owner before it housed my
Falcon.
The Freekeys top has a small hole cut away above where the floppy drive
light sits on a STE (put there by the previous owner).

All software items for sale are originals with manuals where
appropriate.

Offers by mail please to pgrainger@cix.compulink.co.uk

>
>Can I connect an internal SCSI drive in my Mega ST2?

You can install internal SCSI drive to a MEGA ST, with ICD Micro. The power supply will handle most of the new drives, but mine crashed after some years of use. There is also another internal SCSI controller for MEGA ST from Hard&Soft (atleast I think they had one). The ICD controller is limited to one drive only, unless you will do a splitting cable to the controller.

Take Care, Miika

Source record: 126384
Cross-posted to: comp.emulators.misc,comp.sys.atari.st

Are you aware that some people are currently trying to get companies to allow the distribution
of their old Atari ST games on the internet?
I have had several replies from major companies who say they are currently discussing the possibility
of free distribution on the internet. But the flagrant disregard of copyright shown here is not going to help us. You should stop this illegal distribution and only post games from companies
who agree to their games being free on the net.
I'm sure you would agree this is for the good of the Atari ST/Atari ST Emulation community.

# 4500. Where can I buy a NOVA board for my Falcon?

Newsgroup: comp.sys.atari.st
Date: 1997-03-05 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <hxCbZDg.johnhechtman@delphi.com>
Source record: 126389

Having just got Calamus, I'm now in the market for a video accelerator board for my Falcon. Space is no problem - I have a Wizztronics case. And adequate power is no problem - the Wizzo case comes with a 250W supply.

Howard Carson at MGI recommended the NOVA board "if I could find one". Is there a better option? I'm willing to lay out some decent $$$ to make my Falcon a kickass DTP machine. I've already got 14 meg of ram, a 640 meg HD array and a floptical drive for backup. I'm using an NEC 3D monitor, so I;m likely able to display anything a better video setup would put out.

What is the best currently available video option for the Falcon? A NOVA, a Panther board? The Afterburner? Pros and cons?

Thanks in advance for your help!

JOhn

Yes. STiK 2 runs completely from the AUTO folder, so once connected, even
after a resolution change you should not need to do anything for being
able to restart Newsie for instance.

Cheers Peter

I think you are mixing things up here. Would you say that changing
SIMs are that difficult? If you have a regular ST, not STe, yes then
it might be a bit tricky, but with the STe it's just a matter of
remove the old SIMs and put in new one.

I havn't realy looked how the STe works, but I think it has 4 SIM
slots right? It would then just be to get 4 1MB SIMs and remove the
old one and put in the new. 120ns will do I guess.

Hi Robert,

: Please try: Steffen Scharfe@HRO.maus.de

I suppose the address should be "Steffen_Scharfe@HRO.maus.de". I've sent
him an email at this address about a week ago, but received no answer.

: Eh, do you have some news!? ;-)

It depends what you're thinking of? 8-)

If it's our game Willie's Adventures, than I've got some good news...
A new version of it will be out this week or at least in the beginning of
next week. It has been _greatly_ improved since the version from February
1996, and it's still running at full speed (50 frames per second) on a
standard Falcon030. Look out for it, and if you're not on the mailing
list, it's definitely time to join it now! 8-)

It agree the most of the arguments are unserious and some of them make me
laugh. I think many of the people who are writing talk about law without
knowing it. I've seen that copyright law is sometimes something formal, and,
what is worse, it is dependent of what some people would do if they decide
they could get _money_ from it. And law, morality, and the personal view of
good and bad is not the same.

> If you wonder who I am (obviously anonymous), I can tell you:

> Enough now, whatever shit some idiot may answer now, flaming me, be informed
I thought for a while that was what you wanted.

> that I will no longer reply, I just don't give a damn...

I hope that nobody forces you to reply and that you have said what you
thought.

The only thing _I_ wanted to say is that it isn't useless to know that some
things are copyright and to be aware of the chances/possibility/probability
for someone to want his rights.
Sometimes one has to care about it and sometimes not.
It was your phrase which seemed to deny the discussion about copyright at
all and not certain postings.

Bye.

I hope the other readers will forgive me that I give a personal answer in a
followup, but I think that I have written too short too, and I needed to add
a bit to it.

I think it should be good if someone writes document text, which says what
is piracy and what is not. I wish i knew if a request for a copyrited
software is already a violation of the law (and which of the laws),
although, I guess the lawyers don't agree about it.

Of course i want this only if posting such text is allowed :-) , but if it
isn't, I hope at least someone from the people who are writing here knows
what he is writing about and can give the name of the document and maybe the
section number.

>still an external function?

Hi Richard,

You should be able to get 2 floppy drives and you hard drive into the desktopper either with one floppy drive at the side if you have an STE/STFM/Falcon and one in the middle bay. desktopper has enough room for all of your floppy drives/ hd and power supply in its top bays. I personnally have 1 500 Mb HD, 1 250 Mb HD (stacked on on top of each other in bay 1) 1 CD ROM in bay 2 and 1 Expose RGB mixer and power supply in bay 3. the whole thing is powered from a PC power supply behind bay 1 and my screenblaster 2 cart is extended so it sits inside the case as well! At first I thought the cables would be untidy at the back but I made up a scsi centronics to 3 way scsi ribbon cable and this keeps everything tidy. I am very pleased with the desktopper as I beleive I could never have got all these into a falcon MK x case.

E-mail if you need any further help

Easy, Rich. Too many statements like that and you'll attract Pete Olson's attention - then we'll have a month or so of him telling us copy and distribution of copied software for non-profit purposes is *not* a crime under US federal law. However, there is nothing to stop JTS Technologies suing the pants off any pirate in a _civil_ court of law. They would most likely win too.

Dead is dead, when you come right down to it.

>to is the use of this newsgroup, /in clear violation of the charter/ and

Ho he cant talk about piracy.."for"...but everyone else can talk
about it "against"?
Again I insist, I am not saying i agree with piracy, but I also dont
agree in one rule for one and...

>also in violation of the terms of service of all reputable Internet Service
>Providers (and even AOL), to solicit assistance in committing software

The posting I originaly quoted was saying even if it is wrong, surely
we are allowed to discuss it?... I have seen furthur postings from the
same moron who should be flamed to hell and back, but not this
particular one..

>piracy. I object to piracy in principle, but I also recognize the

Ho dear...most people do, that goes without saying?

>impossibility of stopping it when done through private communications.
>Howeve, when it is attempted in /public/ communciations, I will (and have)

This particular posting was defending the right to discuss it, not
defending the right to ask for it or try to give it or whatever the
hell pirates do..

>not involved) is none of my business. What is done in public is everyone's
>business.

FREE SPEECH...you cant decide someone should be punished because you
(and the rest of us) dont like the subject, freedom of speech means
people can speak freely without fear of retribution, in this case the
posting was asking for that, thats the posting I quoted, not a posting
asking for pirated stuff?

BTW posting an opinion to a thread then making followups somewhere
else, thus not giving the person you post to a chance to have his/her
say.. is called hit and run?.......if you don't want to continue this
thread then dont post to it, rather than try to get the last word

in...it may suprise you to learn that others have opinions and will exercise there right to forward them..like I am, in what I think is a calm decent manner :)

> > idea on how to connect the two together.
> >
> > Anyone know how I can do this?? Or if it is possible at all? I don't want
> > to fry the serial chip on the falcon :)

Just get a Mac-to-PC null modem cable. Or if you want pinouts:

mac serial port:
(printer end)
mini-circular-square-din-type connector

U
8 7 6
5 4 3
2 1

1 handshake out (DTR?)
2 handshake in (RTS?)
3 TD-
4 GND
5 RD-
6 TD+
7 GPinput (NC on Mac plus and earlier)
8 RD+

This is an RS-422 interface not RS-232, hence the paired IO pins (+ and -).
To connect to an RS-232 device: attach the - pins to the RS-232 data
pins, and RD+ to ground. The handshake in and out are the hardware flow
control, GPinput is carrier detect.

Check out http://csgrad.cs.vt.edu/~tjohnson/ for a very comprehensive
pinouts list...

That's true enough, but if you're going to be using the Atari VGA monitor
block, you won't get the SC1224 rezzes anyhow - so you can go with a
less-expensive monitor, liek the NEC Multisync II or 2V.

What a strange concept. :)
Mint_ovl for mint is the best that you can get right now.
It works fast and no bugs.
WHY the hell do you want to play with the original ovl??

>I tried the CAB-for-STiK overlay version 1.18 and this appeared to work to
>begin with, but when it came to "receiving data", it just got stuck on 0

Well, I tried Starcall on Serial2 instead of Modem2 tonight and it worked. Apparently there's a bug in the device routines vis-a-vis the TT's ports. Sure was nice to use the 57600 speed again, though!

Hi all!

I'm a poor college student looking for a good deal on an NEC 3D M-sync monitor. I was fortunate enough to have had my parents give me the money to upgrade to a Falcon, but not enough to get a monitor. I was told that the NEC 3D is the ideal monitor for this system. I'm currently using my SC1224 monitor from my old 1040ST, but I'm needing to sell the ST because I'm running too low on cash to have an unused computer sitting around, but I thought it would probably be worth more if I sold it with a monitor. If someone has an NEC 3D they're willing or wanting to sell at a relatively affordable price, I'd love to hear from you! I'd also like to hear from people wanting the ST. I'm willing to work out some kind of deal for a trade or something, too!

Somewhere in thisthread some posting implies that Notator SL will run on a Falcon. As far as I know it only runs on stock 68000's with TOS 2.06 or under. Even has problems (not insurmountable) with 16 mHz and certain cache utilities.

For the record: I use Notator SL and love it. But I wish that I had a Pak/30, Falcon or a TT for all the DTP stuff that I got involved in. Calamus is molasses on an ST, even with the 16mHz accelerator. I have been warned not to get involved with 030 processors as it will simply not run Notator SL under any circumstances, and I'll have to find a second computer if I want both worlds, as it were...

Anybody know anything different?

Just change your IP address to 0.0.0.0. In the dial script, replace
"slip" with "ppp" (or whatever your provider uses) and delete the
exchange that asks for an IP address.

If it fails to connect after telling you what the IP address is, you
may need to add "status up" as the last line of the dial script.

The above instructions are for OASIS 1.35E; I have never been able to
connect with OASIS 2 because it does not seem to have the equivalent of
a "status up" command.

If you want to do it with your Atari you can convert it with
BCONVERT 1.77 which is available at some FTP-sites here in Germany.
Maybe elsewhere, too.
BCONVERT has lots of ATARI graphic formats and converts them to BMP
and other Windows-compatible formats.

# 4537. TELNET web pages needed!!

Newsgroup: comp.sys.atari.st
Date: 1997-03-05 00:00:00 UTC
From: bdc2@bdc2-ra.cwru.edu
Message-ID: <12894630_Beta11_OASIS_NEWS@bdc2-ra.cwru.edu>
Source record: 126465

Some of you may know that I am writing a new VT102 compatible
Telnet to run with STiK/CAB. I want to integrate it into the CAB structure,
so that if a WEB page comes up that needs Telnet, it switches automatically.
The software part is almost done, but I need web sites to test it on. If you
know of any such, please e-mail me and let me know. Don't respond here,
'cause I need to save the letters, and can only do it with my e-mailer.
This should work with 1.5 CAB and with the new 2.00.
Also, of course as a standalone program under STiK.

Thanx in advance.

the Prof.

I have to say that this was disturbing--but also a bit of a leap!

> swithced on. At least my STE did this a lot.
> 

I have only used Magic on my Falcon, and I cannot count the number of times I turned the machine off, booted it up on Linux to rename Magic out of the startup folder so I could do what I needed... only to realise later that a long bootup was standard for it. When I start the Falcon now--with Magic--I go off to the kitchen to make myself a sandwich because I know I'll wait.

> http://www.orient.uw.edu.pl/~conradus/docs/maghat.html, while ASH's answer
> can be found at http://members.aol.coom/ashinfo/mhate.htm

Some of the ASH's comments were a little over-doing it (blame the app. is one of my least favourite replies to any problem). I really don't think it's any fault of my CD driver that Magic will let me play music, but never find the drive when I look for data, despite using what appears to be a pretty respectable and popular driver.

And, after reading the Draco page, I will agree to some of the problems pointed out. When I purchased Magic v5 I was initially dissapointed. I can say that in all fairness to Magic, it has offered a few extra opputunities that standard TOS did not: multitasking, and the advantages of running CAB and my text editor, or coding for class

while I play a music CD are great. I can say mostly, that I simply have not had the time to play with it, but have noticed more than a few irritations.

## 4540. Free telnet host list needed!

Newsgroup: comp.sys.atari.st
Date: 1997-03-05 00:00:00 UTC
From: bdc2@bdc2-ra.cwru.edu
Message-ID: <1265436_Beta11_OASIS_NEWS@bdc2-ra.cwru.edu>
Source record: 126468

I am writing a new TelVT102 telnet, fully VT102 compatible, for use with STiK. It is almost ready to be released, but I need some freely accessible Telnet host sites that can be used for beta testing. I have two sites of my own, but I would like to get as large an assortment as possible to test. I must, however, have sites that either don't require a password, or accept some simple FREE one.
Please e-mail these hostnames to me as I need to keep a record in my e-mail file.

Thanx in advance,

the Prof.

# 4541. 2nd harddisk: formatting/detecting?

Newsgroup: comp.sys.atari.st
Date: 1997-03-05 00:00:00 UTC
From: Rene Kint <itsux@xs4all.nl>
Message-ID: <331DAC38.6649@xs4all.nl>
Source record: 126469

I have a second HD attached to unit 0 (an original SH205).

The 2nd HD is a Seagate, but I do not know the number of
sectors, etc.

A couple of questions:

- How can I make my ST recognize this second drive?
- How do I format the 2nd drive?
- I don't have HD tools! Which should I need, and *HOW*?

I know it is attached correctly, for it has worked
a few years ago. But somehow the formatting got lost
and now my ST won't do anything with it.

Regards,

R.

What I meant was that removing these routines might slow down the games, and
interfere with it's original performances. You will be distributing a game
that carries a title and credits, yet it will not perform like the original.
That is what might make the author/company/owner of the rights unhappy.

>I had a different idea, though it would only work for emulators - patches

I've had Syquest's both the much older 44 meg and the EZ-135 now for
over a year with no problems at all on the EZ-135 and one defective
used cartridge which destoryed the read/write head on one of my 44's.

I wouldn't say it's the safest method, but I sure trust them more than
I ever would a ZIP drive or floppies. And access speed is MUCH
FASTER!!!..

# 4549. MagiC and memoryprotection. There is none?

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: Magnus Kollberg <emwoll@emw.ericsson.se>
Message-ID: <yvv67z55tfk.fsf@emw.ericsson.se>
Source record: 126327

Hi,

I guess you all has read about the discussion about MagiC and memory protection. I finaly started to get uncertain and thinking that it all was just a rumor, that it should have memory protection that is.

Well I have looked through the manuals I have got with MagiC 4 and 5 and there is not one word (atleast I havn't found it) about memory protection. So I guess the answer is. MagiC hasn't got any memory protection and that is why Andreas asked me to specify who had said it had, he nor 2B has never claimed it has got memoryprotection.

What I can't understand is why Andreas just couldn't write a message saying that it doesn't have it. It would have been so much esier and would have saved us from complaining on Andreas and the 2B about something which has never excisted.

So if Andreas doesn't say anything else the conclusion is that MagiC hasn't got any memory protection and the manul doesn't say that it should have it either. That is why it so easy to make it crash.

# 4550. CAB Proxy Question

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: jdaddin9@airmail.net
Message-ID: <5fm1iu$64b@library.airnews.net>
Source record: 126328

My provider has provided a use for using a proxy in their customer's web browsers. They give the server name and then the port number. Is the port number required when entering the proxy into CAB? Can I enter: "example.server.net:8080" in the line with 8080 being the port number or should I just leave it off? Also, will the proxy function work with the CAB-for-MiNT-net overlay? Thanks!

: include any RAM or CPU in the darn thing. They saved a few bucks by doing
: this and did not pass the savings on to the users. The printer appeared
: to operate fast due to the direct connection to the STs high speed
: "SKIZZY" port.

The concept is IMO excellent. Instead of using a slow interface such as
the paralell port, the Atari lasers use the fast ACSI connection, which
is essentially an SCSI connector such as the Mac or the PC uses. It is
faster than any other laser printer, especially, when it comes to
pronting large bitmap graphics. I will never understand why the usage of
SCSI in the pC world is so low.

: It is still a "good" printer for an Atari system but supplies are more
: expensive than for any other laser printer.

That is not true. Despite from the interface and the logo, the Atari
laser printers are standard printers used by many other manufactureres.
You can get - for the SLM 605, for example - spare parts from Toshiba or
Mannesmann Tally, which work perfectly. The SLM 805 is a Canon, AFAIK.

No, that's right. I've got an IDE drive as my boot. MagiC boots much
faster if there's a disk in the floppy drive. AFAICT, it's another
example of MagiC being primarily ST software that also happens to run on
the Falcon.

Look for CBHD5* on one of the atari ftp sites. It contains everything
you need for using the 2 drives. I'm using it on a Megafile 30 with 2
drives attached.

As for the seagate parameters: A little more info would be nice, like
what type is it, a ST225, ST250, ST235(R)????

Greetings,
Jaap.

# 4556. Taylor UUCP problems

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: jmf@informatik.uni-koblenz.de
Message-ID: <5fmhgd$dn$1@newshost.uni-koblenz.de>
Source record: 126334

I am using Taylor UUCP 1.03 for the Atari to connect the ST to a PCS Unix system running BNU UUCP.

However, when the BNU uucico tries to connect the ST, I get the "WRONG MACHINE NAME" message.

The UUCP Nutshell book says:

The [...] message is produced by the Master when the hostname in the "Shere=hostname" message from the Slave is not the same as the Master thought it was calling. If this check fails, the Master [...] hangs up. This check [...] does not work if the Slave uucico is too old to put its hostname on the "Shere" message.

Is there a possibility to get this straight with Taylor UUCP 1.03? Or is there a newer version of the package?

Tschuess

I'm not 100% sure,but I talked to Norbert Wieczorek who made most of the
software delivered with Hard&Soft's Speed Resolution Card. He told me
Hard&Soft nolonger supported the Atari platform. Fortunately he does!

Message-ID: <5fmqed$6vk@due.unit.no>
Source record: 126338

Goetz Hoffart (Goetz_Hoffart@ka2.maus.de) wrote:
: JES>They also claims that the long (Extremely long.) bootup only occurs
: JES>on Falcons without IDE-drives, and that MagiC does not look for a
: JES>boot-drive (I guess they mean boot-floppy because that's what Draca
: JES>talked about.). So why does MagiC wait forever if there's no floppy
: JES>in the disk-drive?
:
: Wrong. MagiC checks for the IDE drive, not for the floppy. There is a patch for
: Falcons without IDE drives, called MPATCH.

How can you say that? Fact: When I boot MagiC *without* a floppy inserted,
the LED on the drive lights up, the drive checks for a disk and MagiC
waits. Long. Atleast 15-20 seconds. If there's a floppy inserted, the
drive is still accessed but MagiC continues immedielately.

I only have IDE-drives so that can't be the problem.

: JES>Perhaps, but I have no problems with MOD-players except when I use
: JES>MagiC. N.AES+NVDI is fine, Geneva (Demo.)+NVDI is fine, TOS+NVDI is
: JES>fine,
:
: Because MagiC has a totally preemptive (sp?) multitasking. MiNT still uses the
: old GEMDOS.

Partly correct, MiNT replaces some parts of GEMDOS. But what has this got
to do with the NVDI-problem? DSP-stuff works just as poorly under MagiC
wether NVDI is loaded or not.

: JES>Falcon that's faulty, not MagiC. Finally somebody has admitted that
: JES>the problem actually exists!
:
: It exists. But my Falcon had this problems even without MagiC. It is a really
: ugly designed machine (just think of the weird 16 bit memory interface to the
: CPU) and a lot of Falcons I know had hand-soldered ICs on the mainboard -
: soldered by Atari to fix problems (with SCSI, the DMA, the video ...).

My Falcon has a lot of patches as well, and I have to agree that this is
far from ideal. But Andreas Kromke has previously stated that there's no
way to fix this, and I can't understand why. If I use MiNT+N.AES my
Falcon runs without a crash for hours (Switch it on, do some programming
all night, switch it off when I'm finished.), so clearly there are ways
around this. That was my point.

>Can anyone help me out here?

If you want to edit the colour icons, you can get RCS 3 from ftp.cnam.fr.
Alternatively, Interface/Zoom (commercial software) have a better editor,
but you have to pay for them.

For mono icons, any resource editor should work.

# 4563. FS: MegaSTE4 and other hardware

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: ci086@FreeNet.Carleton.CA
Message-ID: <5fmsvs$a62@freenet-news.carleton.ca>
Source record: 126341

I have the following Atari hardware for sale:

Atari MegaSTE, 4Megs RAM, 50MB hard drive, 1.44Meg 3.5in floppy, 68882 FPU,
TOS 2.06 $160

Monitor, Atari SM125 monochrome $20

Monitor, Zenith ZVM135 RGB colour, CGA resolution, with built-in audio,
with Atari ST-compatible adapter cable $15

Monitor Master, for monitor switching $2

Hand Scanner, Migraph, B & W and gray scale, with Touch-Up, Save and Scan
and Merge-It software and scanning tray $25

Take all the hardware for $200.

I have lots of software available as well, mostly desktop publishing, graphics,
CAD and utility software. Please e-mail for a list if interested.

I would prefer to sell this equipment locally (Ottawa, Ontario area)
to avoid the hassle of shipping. But if you are willing to pay for
shipping, I will send it anywhere in Canada or the US.
If anyone buys the lot, I will deliver free within 100 miles of Ottawa.
Please reply by e-mail if interested.
Thanks,

Bill

You are totally correct Magnus, he was confusing the ST with the STe.
Four(4) 1MB SIMM chips, all the same kind and speed and 30pin, can,
after taking the STe cover off and the metal shield, be placed in the slots
where the previous RAM chips were.
no problems.
They can only go in one way, just make sure you have a good connection.
good luck.bonne chance

> install. You might look for a 1040 already upgraded to 4 megs.

For the STe, you need 4*1meg, 30 pin SIMMs (60-120 ns range). These
cost
about $10 each on the used market. Get the same speed, brand and style.
I don't think parity is a problem on the STe.

To install them, remove the screws in the squared holes, on the bottom
of
the STe and take off the top. Remove the center RF shield, there are
little screws and/or bent tabs holding it on. Being careful not to
break
the little clips on the SIMM sockets, exchange the four 1 meg SIMMS for
the four 256K SIMMS. Note the orientation of the 256Ks and put the 1M
SIMMs in the same way.

Replace the RF sheild, put the top back on, screw it all back together,
plug it in and enjoy. That's all there is to it.

I'm fairly sure that the Syquest uses teh same technology as it always has, it's just that like everything else the capacity has increased. Also Kevin said that the Zip uses an optical methos, I'm pretty sure that it doesn't, it may use optical tracking but AFAIK it's just a plain old high density disk drive.

> number or should I just leave it off? Also, will the proxy function
> work with the CAB-for-MiNT-net overlay? Thanks!

Put the following lines into your mint.cnf (or someplace else where you
are sure that these envariables apply when cab-for-mintnet.ovl is
started):

```
setenv http_proxy "http://example.net.server:8080/"
setenv ftp_proxy "http://example.net.server:8080/"
setenv gopher_proxy "http://example.net.server:8080/"
setenv news_proxy "http://example.net.server:8080/"
setenv wais_proxy "http://example.net.server:8080/"
setenv no_proxy "localhost,server.net"
```

You can leave "localhost" out of no_proxy if you don't run a web server on
your local machine (I really mean /local/, i. e. your Atari). If you know
of other domains that shouldn't be accessed via proxy you can put them
there, too. Usually your provider will tell you.

Ciao

Guido

>How can I edit icons for Thing?
>Ideally, I'd like to be able to dwonload a new icons.rsc file and play with it.
>Can anyone help me out here?

I asked the same question a while ago because I had problems with it, but I
figured it out...
I have no experience with colour icons (as I use my STe mainly in
monochrome mode), so I used the "monoicon.rsc" file (or whatever it was
called) and renamed it to "icons.rsc" and putting it in the "thing" folder.

Anyway, I used "ORCS" to edit the RSC file.
The icon file is divided in two parts- normal and small icons. I'm not sure
how these are "connected" together, but I haven't really bothered to find
out as I use mainly the "big" (normal) icons.
So, having opened up the RSC file you can edit the existing icons and/or
add new ones. Refer to the documentation for ORCS to learn more about how
to do this.

When going to "Thing" again and editing the icons you'll probably get some
sort of message saying that some icons are assigned wrong, so you might
have to re-edit some stuff, but saving the icon setup and then reloading it
and saving it again usually helps. I guess this is because the order of the
icons is shifted when you add new icons etc. so the setup file for it will
be wrong.

You can get ORCS from:

ftp://ftp.sn.no/user/hallvart/atari/orcs.zip (162 Kbytes)

# 4573. ZIP drive and Diamond Back 3

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <94281434_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 126351

Having now bought myself a Zip drive to go with my trusty Falcon, and having plugged it in, formatted a disk, and partioned it (probably wrongly).

I have a G partition with a 100meg on it. Excellent I thought.

Why does Diamond Back3 refuse to back up to it? It says unknown boot sector, and won't do the backup. Ahh!

Does anyone know why this is, and more importantly how I can get DB3 to access a 100meg partition Zip drive? I'm using HD Driver 6.0

TIA, Gary

Well I didn't know that CAB was a gopher browser as well.
So I never tried it. For gopher servers I use Gopher :)
For the numerical address, I have no clue, Never have any prob like
that. tell me what URL and I will try.

Clarification: I will deliver free, by car, myself within 100 miles approx.
of Ottawa, Ontario. This includes Montreal and Kingston, obviously, and other
centres. Not a bad deal.
Thanks.

# 4579. For sale!

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: magnus.thylander@stacken.ct.se
Message-ID: <ftn_2.204.219.0_1619a935_Magnus.Thylander@stacken.ct.se>
Source record: 126357

Okay, it's finally time to sell off all my computer equipment, here we
go:

Item nr 1:

Atari Falcon030/4/65 (4Mb RAM, 65Mb internal IDE-HD)

Hardware(beyond the usual Falcon stuff):
DDD HighSpeed40 accelerator (40MHz CPU,20MHz BUS, 40MHz DSP) -
unfortunately it bugs out quite often using LHA 3.x, ON/OFF switch
at the back of the computer, installed by autorized Atari dealer
Copson Data AB
ScreenBlaster video-accelerator (external)
Logitech mouse (the best I've ever tried!)
Barely functioning GeniScan ST, greyscale handscanner
Small freestyle-loudspeakers
Joystick "ErgoStick"
Both Falcon>VGA and Falcon>RGB adapters for monitor-connection

Software included:
Magic 4 (GREAT multitasking OS)
NVDI 4 (SUPERB software-accelerator, also replaces SpeedoGDOS and
supports True Type fonts)
Calamus 1.09n (Swedish version, including the manual)
CoNnect 95 (registered version of the no 1 comm-program)
STOOP (Registered version of this great boot-selector, similar to
SuperBoot only a lot nicer and better)
Da's Vektor (GOOD vector-graphicsprogram)
RainBow II MultiMedia(VERY GOOD Mukltimedia-program)
NeoDesk 3 (replacement desktop)
NeoCLI v2.1 (Command Line Interpretator for NeoDesk)
That's Write 2.09 (Word Processor)
Harlekin 95 (GOOD multi-acc, including calender and text-editor)
HiSoft WERCS (old RSC-editor)
TimeWorks Desktop Publisher ST v1.?
STOS - The Game Creator
SpeedoGDOS (of course)
MultiTOS (of course)
around 50 HD-disks filled with packed PD/ShareWare software
around 30 coverdisks from ST Format/ST Review
18 HD-disks with PD/ShareWare that I got from "AtariSpecialisten"
when I bought the computer
1 diskbox that can take 100 3.5" disks
m.m....

Books included:
Programmering i C (pagina)
Atari ST/STE H&#65533;rdfakta (pagina)
Programmera 68000 (pagina)
Atari ST Application Programming
Atari ST Internals
Logo Programming
Atari ST User's Handbook
Atari ST Logo
And of course the Atari Falcon030 Owner's manual

Price: ????

Item nr 2:

Aktra Personal Computer (PC, minitower)

Hardware:
i486 dx 33MHz CPU
8Mb RAM
VESA Local bus
2 serial + 1 parallell + 1 joystick port
170 + 420 Mb IDE-Harddrives
Trident SVGA with 512kb minne (800x600 at 256 colours at most)
15" "MultiScan" SVGA screen, SMILE (VERY GOOD!)
Standard pc-keyboard
Agiler 3-button serial mouse
Canon BJ10ex, black/white bubblejet printer 360x360dpi

Software:
DOS 6 (Swedish)
Windows 3.1 (Swedish)
Plus a mixed bunch of software left on the harddrive...

Price: ????

Give me a reasonable offer and the computer or computers are yours as
soon as possible...

I live in Sweden (Stockholm) and Swedish buyers are preferred... Reply
either by e-mail to "Thylboy@stacken.ct.se" or call 070 / 657 81 31
(mobile phone) and drop a message if I don't answer immediately...

1.5 Upgrade to TOS 2.06 which most emulators need to work well. This will cost you a good $100... If you're lucky enough to find* that ST in the first place. Around here I've never* seen anything but 2600s and a few 5200s at Goodwill.

Indeed the ST can do bidirectional I/O through the parallel port, but
this requires direct programming of the PSG. This means stuff that runs in
the background, like a network driver, can run into problems when other
programs (or TOS) try to use the PSG to make sound, to use the floppy drive,
the serial port...

# 4585. Thanks! and more NOVA card Q's?

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <pvLbhT8.johnhechtman@delphi.com>
Source record: 126363

Thanks to all who replied to my query on the NOVA card. Several people directed me to Nima at Homa Systems. I've talked to Nima, who was kind enough to tell me in advance about the complications with the NOVA card.

It seems that the NOVA card requires the your Falcon be set up with TT ram if you want more than 4 meg. Nima says there are several cards to do this, among them the Afterburner and the GE-Soft card. I currently have the Wizztronics card with a 16 meg SIMM. As GE-Soft (AFAIK) is out of business, I'd like to hear what people have found out about the Afterburner who are using it. Is it stable? Compatabile? Nima said my other options are a Blow-Up FX card or a new TT ram card being done in Germany. The same questions apply to these to cards.

Another question, I have the FalconSpeed 286 emulator card. I use it to run Quicken for DOS, as I've never found any TOS program that is as good for money management. I've looked at Mega-Check, et al and they just don't have a checkbook style front end, the way Quicken does. Nima says he has NO idea if the FalconSpeed would work with the NOVA card. The F'speed has a pass-through, so the NOVA could sit atop it, has anyone put these two units in a Falcon? How does it work? Any other ideas to solve my problem?

Thanks in advance to all for your help!

John

# 4586. Re: Can I connect a SCSI Drive to my MegaST2?

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: dgh <dgh2010@netsync.net>
Message-ID: <331F3024.9FB@netsync.net>
Source record: 126364

As far as I remember, yes you can. The Mega STs usually came with a wopping 30 MB scsi disk internally. You should be able to take out the one in there, or put one in its place if its gone. The only prob will be getting the formating and booting software????

It will also measure your CD-ROM performance - just be sure to set it to
read-only ("lesen" before selecting a large file on the CD. I recently
tested 2x, 4x, and 8x drives on my TT - the 8x transfers data at about 1.2
megs/sec, fast enough for direct playback of QT and AVI files.

So do I, using GlueSTiK 0.02.2B3
It works with : CAB_OVL 1.21 (for STiK)
I use MiNTnet 1.01
The setup is basically 'PPPkit14'.

I had to throw out 'TOSWIN.ACC', however.
-It caused a crash.

My advice is, get the above software.

> However I'm not sure either of the previewers work well with MiNT.

I'm an absolute newbie with TeX and have installed the above-mentioned
CS-TeX a couple of days ago. I've given up the idea to run the TeX-thing
from the provided GEM-shell and I'm doing it from the command line of my
shell. That works fine after you have set the appropriate envariables.
I even run the pre-viewer from the cli with no problems.

Anyway, it might be a good idea to re-translate the sources with a newer
version of gcc and with MiNTLib. The current version is awfully slow.

Ciao

Guido

# 4591. Falcon IDE HD comes on not using?

From: jlendino@panix.com
Message-ID: <5fl65s$cv1@news1.panix.com>
Source record: 126419

Now's the time to drag that broken machine out of the closet and make some bucks off of it. The average 4 MB STE system w/o monitor goes for $125 --- will give $30 to $50 for a keyboard in excellent condition.

Regards,
Jamie

# 4593. CAB with GlueSTiK/MiNTNet - doesn't work right

Newsgroup: comp.sys.atari.st
Date: 1997-03-06 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <HCGMFGUQUp@tos.ak.planet.gen.nz>
Source record: 126420

I access the internet via a PPP connection using MiNTNet.

Since the CAB-for-MiNTNet overlay is no longer being supported, I am now trying to use the CAB-for-STiK overlay via GlueSTiK.

I tried the CAB-for-STiK overlay version 1.18 and this appeared to work to begin with, but when it came to "receiving data", it just got stuck on 0 bytes and would not receive anything.

I then tried version 1.21 (what I believe to be the most recent version) but CAB just crashed as soon as I tried to access a page.

I am using CAB version 1.5 and MiNTNet version 0.90.

GlueSTiK does appear to work for other STiK apps, however.

Any help on getting the above system working would be much appreciated.

>login? Thanks for any info.

Just set a line "ppp pp0 ipcp local address 0.0.0.0" (pp0 or sl0 or
whichever name you gave to the interface) in STARTUP.NOS, the zero address
allows NOS to negociate and accept the address given by the provider...

Bye! Bruno.

>What a strange concept. :)
>Mint_ovl for mint is the best that you can get right now.
>It works fast and no bugs.
>WHY the hell do you want to play with the original ovl??

Well, there is a bug if a link uses dotted notation (e.g. 192.0.0.1
instead of my.garbage.org). It locks up pretty nicely. Fortunately,
since you're probably running Multitos, you just kill CAB.

Netscape can resolve these, so not too many people will fix them if
they work for Netscape.

# 4596. Wild & Wacky Atari Auction (Update #7)

Newsgroup: comp.sys.atari.st
Date: 1997-03-07 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970307044000.XAA24347@ladder01.news.aol.com>
Source record: 126273

Wild & Wacky Atari Auction (Update #7)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

> As far as I remember, yes you can. The Mega STs usually came with a
> wopping 30 MB scsi disk internally. You should be able to take out the

No, the MegaST never came with an internal disk. You are talking of the
MegaSTE and this one came with a 48 MByte or 80 MByte SEAGATE SCSI
drive.

> one in there, or put one in its place if its gone. The only prob will
> be getting the formating and booting software????

Why should this be any problem? SCSI drives connected to the Atari can
be formatted and booted with any of the usual driver packages, e. g.
CBHD, HuSHI, HDDRIVER, AHDI, ...

You can't do something wrong when partitioning a partition that has a
size of 100 MByte. Only with much larger partitions you have to care for
certain options when partitioning. 100 MByte is a size any TOS version
supports and so no special action is required.
> Why does Diamond Back3 refuse to back up to it? It says unknown boot sector,

Did you partition your drive TOS or DOS compatible? Some disk tools are
not able to access DOS compatible partitions > 32 MByte.

>and won't do the backup. Ahh!
>TIA, Gary

Hi Gary,

Well, I see you bought yourself a "White Elephant" <g>. Maybe Nemesis doesn't like DB3? Curious though, why you did you use a single partition? Unfortunately, I have no idea as I don't use DB3, HDD6, or Nemesis ;) I'm waiting for Comp. Direct to sell me Nemesis. No word so far...

Doc Uwe probably has the answer. I do wish you well, as I have gleaned much info from your posts to this NG.

(Just a RUMOR!) Someone refered to as Billionaire Bill went to Univ. of Wash. Medical School for DNA testing. Possible cloning? Scotland clones sheep, Oregon clones monkeys. What's NeXT?

Timing is everything,

# 4600. LOOKING FOR Word Processor

Newsgroup: comp.sys.atari.st
Date: 1997-03-07 00:00:00 UTC
From: Yves Gablin <gabliny@ufrima.imag.fr>
Message-ID: <331FC1FC.2811@ufrima.imag.fr>
Source record: 126277

Hello everybody !

Could anyone make me know of a word processor for Atari computers having
the following functions :
- load and save texts for MS-WORD 5 for Windows
- french dictionary
- font and size choice

And if possible :
- load and save for Le R&#65533;dacteur on Atari
- english dictionary
- synonims dictionary (in french)

Of course, it can be a comercial product but a shareware would be nice
too.

Thanks,
Yves Gablin.

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech

Dear Fellow Atarians,

My friend at work has a bunch of 8-bit Atari computers and stuff
that he wants to get rid of to someone who can appreciate them. He is
willing to let them go for a reasonable amount but would prefer to unload
the whole shebang at one go. Here is what he has.
3 800XL's
1 130XE
6 disk drives
2 monitors
3 printers
all manuals and power supplies and cables
His name is Bob Salopek and his phone # is 415-333-2165.
Please do not e-mail me as I can't help you out on this. Just call him
and negotiate directly. He has no e-mail address so you must use the
phone to contact him.

Happy Shopping

> apply to these to cards.

I have used an Afterburner for a while now and I must say that I have
very little problems with it. I don't think anyone else have had any
problems.

It's very compatible. Ofcourse some programs will not run, but most
does.

The only cathegory of programs that refuse to run is trackers. :-((
Atleast Digital and Graumf tracker doesn't run.

To see a short list which does work and has been tested look at these
pages. http://www.rjelwell.demon.co.uk/ab040.html
It only shows which apps has been tested or not. If a program is not
on the list, it doesn't mean that it doesn't run, just that it hasn't
been tested.

I will add more apps soon.

I wouldn't get a FX-card as the Nova can't handle and accellerated bus
(not without a fan blowing directly at the Nova) so you wont get much
use of a FX-card. I wouldn't either call it TT-RAM (or Fast-RAM) as it
isn't and it's _much_ slower than the real thing.

You might be able to pick up a used Mighty Sonic 32 to get some speed
out of the box.

> Another question, I have the FalconSpeed 286 emulator card. I use it to run

I have no idea about this.

Not in emulation mode, which the PPC's run MagiC Mac
with. They are about equal to a 50MHz 040. Which is very
slow by todays standards. For a TOS based machine I don't
think you will find an equal to the Hades or T060 (depending
on where your standing:)

Mike

You can only have 4MB or RAM with the Nova card. :-(
You will need a RAM expansion of some sort. Either an Afterburner040
(expensive) or a Magnum memory expansion (cheap). I'm not sure if the
Magnum board will work with the Nova, but AB040 does.

If you want a fast mean machine and have alot of cash laying around,
get a AB040 with a Nova card.

>access a 100meg partition Zip drive? I'm using HD Driver 6.0
>
>TIA, Gary
>

No problems here. I just finished my monthly backup of 3 harddisks
(tot. 1 gb).
Make sure you've set the "compatibility option" of the partion menu of
HDdriver to "TOS Standard"
Also if you've inserted a disk into your zipdrive make sure you've
wait until the disk is recognished by the zipdrive (a few seconds,
the led comes up and disappears again).
During my backup I've had these warning too, simply because I hadn't
wait until the zip is recognished by the drive.

Hope this will help.
Martin

Who are you emailing? I have found most dealers (Atari and otherwise) to be
very responsive to email IF there were a knowledgable person at the other
end of the cable. There are a few, however, who seem to find the entire
concept of reading and replying to email to be a vast mystery, solvable only
by the Initiates of the Inner Circle on AOL... <G>

AS for which law, that depends on which country you happen to be in. What's
legal in Saudi Arabia, for example, may be a felony in Canada.

Piracy, though, is easy to define: It is making /and distributing/
unauthorized copies of software. Note that the Internationla agreements on
copyright allow you to make "archival" copies for your onw purposes; you are
only forbidden from giving, selling, or otherwise transferring those copies
to someone else. Technically, copying Sundog for someone whose original
disk has crashed is probably piracy; practically, as long as the fellow can
show that he has a purchased copy, no one will object (and in court, what
matters is the copyright holder filing a claim for damages).

So, the bottom line is: If you own an original, you can make copies for
yourself, btut you aren't allowed to give them to anyone else (or to make
them available for download). If you don't own an original, you aren't
allowed to receive a copy - you must purchase an original.

You might take a look at Phasar 4.03. I've never seen Quicken (ignorance
is bliss) so can't tell you if it has the same checkbook style front end
but I don't think it does. Phasar has you set up accounts (income and
expense - and if set up correctly, practically does your taxes for you.)
You then make entries (account being spent (checking, visa, cash), date,
vendor, expense category, check number if appropriate, amount, and a comment
field. Phasar does have a check writing capability so you can have your
checks printed out from phasar. It also supports budgets and many report
categories so you can keep track of what is happening.

I've used mine since 92 and wouldn't be without it. Taxes now take me an
hour or two to complete, where they used to take the better part of a
weekend. Wayne

# 4614. JPEG image manipulation

Newsgroup: comp.sys.atari.st
Date: 1997-03-07 00:00:00 UTC
From: please@no.spam.mail.here.mettav
Message-ID: <30919_please@no.spam.mail.here.mettav>

*Hi Simon*, on 01 Mar 97 you wrote: ...respect, brethren

S>
S> Could anyone suggest a program that will allow me to view JPG files and
S> then alter the sizes ( I have some scanned JPG files and want to be
S> able to trim them, and also to be able to produce thumbnail versions
S> for my site )? I'm hoping for something without too many frills - cheap
S> and cheerful! Any ideas?

I had the exact same problem recently, but luckily I had the benefit of
Jeremy Hughes' experience to fall back on. Fortunately I have a 24-bit (16m)
truecolour mode with an 18-bit (262k) pallete, and only view images in a max
of 16-bit (65k) so the problems of image degradation were minor and the
file-space savings from cropping usually meant that I could afford to re-save
in a higher quality than the original image.

Here's the edited highlights of the thread - useful advice in there as usual:

##########################################################################
==========
stapplications/imagecopy #396, from sidcelery, 685 chars, Feb 26 18:02 97
----------
TITLE: Imagecopy v4.0

..in the non-CD version of Imagecopy v4.0 I don't seem to have the option of
selecting to save as JFIF/JPEG when copying. Can this be right?

I can load a JPG with no problem and Info on pics is fine - it just never
appears in the menu of formats to save in...

==========
stapplications/imagecopy #397, from j_hughes, 756 chars, Feb 27 00:12 97
----------
JPEG doesn't exist as a screen-copy format - it's not suitable for most
screengrabs - but you should be able to convert images to JPEG (JFIF) fo

==========
stapplications/imagecopy #398, from sidcelery, 1167 chars, Feb 28 22:02 97
----------
> JPEG doesn't exist as a screen-copy format - it's not suitable for most
> screengrabs

That's understandable. I was also wondering whether I'd need to copy a (say)
75% JPG using 100% to keep it at 751verall, or whether I'd need to select
75% again IYSWIM...

> but you should be able to convert images to JPEG (JFIF) format.

What I'm actually trying to do is crop an image which has a lot of extraneous
black space around it. Is that something I can do in Imagecopy?
What do people use for editing JPGs on the Atari?

==========
stapplications/imagecopy #399, from j_hughes, 1704 chars, Mar 1 11:35 97
----------
You need to select 75% again. Unfortunately, since JPEG is lossy, you will
degrade the image each time you resave it. Ideally, you should edit images in
a different format, and only use JPEG when you don't want to re-edit them.

> What I'm actually trying to do is crop an image which has a lot of
> extraneous black space around it. Is that something I can do in
> Imagecopy? What do people use for editing JPGs on the Atari?

Load the image into Imagecopy. If it's larger than the window, switch to
full-screen mode. Cut out a portion of the image (pressing [C]), and save it.
Go back into window mode, select Convert, and convert the saved image to JPEG
format.

Note, however, that Imagecopy works in the current screen depth when
displaying images*, so if you want to edit JPEGs you need to be in
true-colour mode. If you want to edit images in a different screen depth you
need an image editor (Studio Photo, PhotoLine, Positive Image etc.)

*[the conversion options are independent of screen depth].

==========
stapplications/imagecopy #400, from sidcelery, 750 chars, Mar 1 22:12 97
----------
I've done it now, remembering to follow your advice about using C rather than
Alt-Help which doesn't allow scrolling, and it all worked comparatively well
by using 24-bit TIF as the format for the intermediate saved file.

Wise move B^{)

d> Now I'd like to get some information from the UK people on this
d> newsgroup.
d>
d> a) how far is Birmingham from London? How long will it take to
d> travel there? What is the best route? (I've been to London
d> before, so I can navigate the underground OK).

About 100 miles (160km).

Inter-City trains from London Euston leave every 30 minutes and will take
approx 90 minutes. The National Motorcycle Museum is 5-10 minutes walk from
Birmingham International rail station (not Birmingham New Street).

# 4616. MagiC hate page: ASH's "antwort"

Newsgroup: comp.sys.atari.st
Date: 1997-03-07 00:00:00 UTC
From: please@no.spam.mail.here.mettav
Message-ID: <30924_please@no.spam.mail.here.mettav>
Source record: 126293

*Hi Jo*, on 03 Mar 97 you wrote: ...respect, brethren

j>
j> I just had a look at ASH's homepage, and found their answer to Draca's
j> "MagiC hate page".

Thanks for the info. I hadn't seen either of these...

j> The interesting thing is their answer to Draca's statement about
j> MagiC's (Version 4) poor stability:
j>
j> "This problem occurs in MagiC 4.0 because the buffer for drives is too
j> small. If someone has a lot of partitions/drives it happens that the
j> system stack gets an overflow. It can be changed in the MagX.INF file.
j> It is fixed in later versions."
j> (The strange this is that they state that MagiC 5 has the same problem)

Hmmm... I have partitions C-M ...

j> They also claims that the long (Extremely long.) bootup only occurs on
j> Falcons without IDE-drives, and that MagiC does not look for a boot-
j> drive (I guess they mean boot-floppy because that's what Draca talked
j> about).

System Solutions' Magic FAQ describes theworst-case scenario as follows:

######
Q. Why does it take so long to boot on my Falcon?

[ED: it doesn't, if you have a IDE drive]

The worst possible scenario seems to be:

No floppy (takes 3 attempts to get to the IDE check)
No IDE (takes ages to realise there is none)
Boots from SCSI with AHDI
AHDI looks for an IDE again (also takes ages)
Then boots...
######

It's fixed with Daniel Hedberg's MAGPATCH v1.4

######
MagiC IDE Patch v1.4 (October 12, 1996)
Written by Daniel Hedberg of New Beat Development

MAGPATCH.TTP forces MagiC to skip the check for internal IDE drives on Atari
Falcon030 computers. This check is very annoying on systems with only SCSI

devices, as it takes MagiC forever to discover there are no IDE drives pres

This version is able to patch version 4.01, 4.02, 5.00, 5.01, 5.02, and 5.03
of MagiC.
#####

j> The rest of ASH's answers was generally sensible, except for a couple
j> of arrogant comments ("Blame the application then.", "Right, forget
j> Prism Paint").

So tell me something that's new... B^{<

# 4619. NVDI driver for Panasonic KXP1081 D.M. printer?

Newsgroup: comp.sys.atari.st
Date: 1997-03-07 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <HCHVCGUQUp@tos.ak.planet.gen.nz>
Source record: 126296

I am looking for a driver suitable for use under NVDI 4.11 that will work
with a Panasonic KXP1081 impact dot-matrix printer.

I tried the standard Epson FX-80 driver, but the page printed as a series
of horizontal bands. Each band contaned a small band of the page,
compressed vertically. The Epson LQ driver just printed garbage.

Any help in finding such a driver would be much appreciated.

> too.

Papyrus, which is commercial, is probably the closest. I don't know of any
sharware word processors that are any good.

> the following functions :
> - load and save texts for MS-WORD 5 for Windows

Word 5 for windows? Do you mean word 2 or word 6? Either way, Papyrus won't
load them directly, but it will load RTF.

> - french dictionary

If there is a French version of Papyrus, then I'm sure it does come with a
French dictionary.

> - font and size choice

Yes, and slant, and thickness,

> And if possible :
> - load and save for Le R&#65533;dacteur on Atari

I'm not sure whether Papyrus does this, it certainly loads and saves
wordplus files.

> - english dictionary

Well, there is one for Papyrus, but I doubt the French version would
include it, except possibly at extra cost.

> - synonims dictionary (in french)

Does Papyrus 5 have a thesaurus? Older versions didn't.

Maybe they just changed the version number so that they could rake in all
those p&p charges?

If it's important enough to bugfix, recompile and make available for the
distributors, how come it isn't important enough to write half a dozen lines
about what benefit the improvement brings (if any at all)?

I find this ridiculous tbh... B^{<

m> Is it possible to make these upgraded memory boards for the STe's?

Well said Ken. I understand that the STe and MSTe require an adaptor to be designed because the MMU and GLUE chips were combined in these models, but hopefully it's only a matter of making the resource available to design it, rather than any other technical problem - this was certainly the reason that MarPet didn't follow through with a board for the Mega STe.

As I've told Frido already, if a memory board is available for the Mega STe I will certainly buy it. Any other takers? Of all Atari machines, the one crying out for extended memory expansion capability is the Mega STe - what you might call the top-of-the-range of 68000-based Ataris.

The prices posted for the STFM versions were as follows - I'd assume an extra 15-20ukp (40-50DM?) for the adaptor?

However, conspiracy /is/ a crime - and conspiring to commit software piracy,
whether or not it's for profit, is still conspiracy. Which is where we're
going to hurt the spammers, as well as the pirates - if their upstream
providers fail to disconnect major spam sites after multiple requests, they
can be charged with "conspiracy to commit denial of service attacks by means
of traffic flooding" and guess what? The US Federal prosecutor will tell
MCI and Sprintlink who their new owners are...

>My sm124 monitor has died. Suggestions??

The usual cause is a dead flyback. You have three choices: Find a reapir shop to replace it (usually costs more than a new monitor), fidn a used, working SM124, or get a VGA monochrome monitor and make yourself an adapter from the old monitor's cable and a 15-pin high-density "D" connector. Follow the instructions in the Multisync FAQ (ftp://ftp.teleport.com/users/atari/multsync.faq) and ignore the parts about the color rezzes. Cost should be about $50 for a used mono VGA.

It's alos possible that your capacitors have bit the dust. Look for "black goo" on the circuit board aroudn teh base of the electrolytic capacitors - if it's there, the caps are probably dead. Replace them with metal film caps rated at least 2x the voltage rating on the original caps.

: j> drive (I guess they mean boot-floppy because that's what Draca talked
: j> about).
:
: System Solutions' Magic FAQ describes theworst-case scenario as follows:
:
: ######
: Q. Why does it take so long to boot on my Falcon?
:
: [ED: it doesn't, if you have a IDE drive]

But it does, if you don't have a floppy inserted!

: It's fixed with Daniel Hedberg's MAGPATCH v1.4

Yes, the IDE-check is disabled but MagiC still waits a long time for a
floppy to be inserted.

I'm not sure, its either www.towers.angband.com, or
www.angband.towers.com, a webpage with a pointer to my fav mud game,
based of the story 'The lord of the rings' by JRR Tolkien(sp), it has
loads of hobbits, dwarfs etc, twatting live with folk(mainly US) from
around the world. Hope this helps ;)

James
(Sad aren't i? :-| )

PS Email me when proggie avilable, or if you need a beta tester, I'm
tired of STiK telnet proggie, its soooo slooooow!

The 'S' means Server. If a file is named 'SHTML' or 'SHTM', the
server knows that this file contains special server commands
that are integrated in the HTML code (similar to Java Script).
These commands are executed by the server. It is possible
that there are more than one file with a .SHTML extender.
For example, someone used SSI (that's the name of the server
language) to insert the time and date to the document.

You guys are getting a little out of hand... First of all I own an Atari ST. The hard drive is bad so I need to get the images. Second of all we are talking about the "ST" platform! Which doesn't exist anymore. No support, barely any new software etc. I can't even find a dealer near me that will fix my drive! Thirdly, do you really think JTS cares anymore? They have 1000's of unsold Jagars stuffed in a warehouse which they can't get rid of!! And trying to get people kicked off internet access providers is ridiculas! Enough of these stupid accusations. JTS has better things to do with their time going after pirates of an absolute ST platform. Take a good look at the 8bit platform! There is all kinds of software out there on the net and no one gives a s*it. And it's keeping the platform alive. If you want to keep interest in the ST platform I suggest you do the same. I think getting the permission to post all those great old ST games is a great idea!! I miss or have forgotten all those great games I played countless hours playing on the ST! Make them public or at least make an ST action /adventure pack for the IBM and sell it to the public! I myself was a true hardcore Atari ST fan but times change. Then again that is my opinion! So stop flaming me! BTW thanks for all the replies from all you generous people out there...

How is someone supossed to get a copy when there is no way of getting a copy because 1) the company doesn't exist anymore. 2) there is no more production of the software. 3)no more support! 4)just can't find a dealer nearest you. Then let's say you do pop $100 for the images. You get an emulator that only runs perhaps 20% of the software... I want to evaluate the the demo but you are telling me I have to pop $100 just to try it?? That's ridiculus!! What if I don't even like the demo!!! If that's the case don't even put out a demo. Sounds like a con job to me if I may say....

Well there is a slight possibility that the connection you desire is
described in the manuals of the HSMODA07 programm that fixes stuff at the
RS232. Unfortunately the text is in german so I am not sure that it
describes what you want. Anyway if you cant get this file just EMail me and
i will send it to you and if you figure out how to do it don't forget to
tell me how you did it.

I've seen several replies to this message, but no-one comments on this status change.

ISTM that Alexander's software over the years means he's possibly the most deserving case to have his work published commercially.

I wonder if version updates will be as easy to get hold of as before? Personally, I don't like writing off to companies for updates - i prefer an update patch of some sort...

# 4648. Wild & Wacky Atari Auction 9Update #8)

Newsgroup: comp.sys.atari.st
Date: 1997-03-08 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970308054200.AAA29395@ladder01.news.aol.com>
Source record: 126222

Wild & Wacky Atari Auction (Update #8)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

>Did you partition your drive TOS or DOS compatible? Some disk tools are
>not able to access DOS compatible partitions > 32 MByte.

The DB3 problem was because I had chosen DOS compatible.
With TOS compatible, DB3 works fine. Thanks for the help.

The problem appears to be thus:

If I partition the zip disk under TOS4.04 to 100meg, standard TOS format,
TOS4.04 recognises the disk and allows me access to it. Ok.

If I partition the zip disk under MagiC5/MagxDesk3.20 to 100meg, standard
TOS format, I can no longer access it. MagiC reports 'invalid drive -46'
whenever I try. Rebooting then solves this.
If I used DOS compatible however, MagiC recognises it straight away (which
is why I was trying to use it with DB3).

A quick solution is to reboot after partioning a disk, but this is a pain.

This sounds like a bug in MagiC5 or MagxDesk? Any ideas?

BTW, when I boot my Falcon says SCSI ID 0.0 is ZIP drive and 5.0 is
Falcon030. Is this correct?

Nope. The "white elephant" was a EZ135. ZIP drives are still in production
:)

No problems with Nemesis and DB3 (in fact I've yet to find anything that is
incompatible, even some games I've tried).
Nemesis is well worth the wait. You won't regret it!!

# 4655. Re: Atari ST as a music platform

Newsgroup: comp.sys.atari.st
Date: 1997-03-08 00:00:00 UTC
From: Kevin Palmer <kpalmer@neosoft.com>
Message-ID: <33210DD0.212E@neosoft.com>
Source record: 126229
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth

The ST is a great solution for music sequencing. Why waste a Mac on this? I used a 520st for all my sequences and they even played off floppy and I never had it miss a note. I had it driving quite a few keyboards to their max too. Sequence data is nothing. MIDI is really fast. The ST is a great solution. Don't waste the Mac when you can dedicate a machine to this. =

I've owned a Syquest 88/44 for about 4 years and used them for much longer when I was in college. I used them just about every day since I was a Graphic Design major. I know at least 10 people who have had them including the newer ones. I own not only Atari computers but Macintosh and Silicon Graphics machines as well. I do high end 3D graphics now using Alias Power Animator and deal with moving enormous amounts of data from machine to machine. I think I have plenty of knowledge and understanding of the products to back up my claim. Everyone I know who has had a Syquest product has had disk problems. I have yet to hear from any of my associates about a problem with a Zip or Jaz disk problem. I personally bought a Jaz disk. =

Hi John!

There's already a fastram card out for the Falcon called Magnum. It
plugs into the expansion slot and can be populated with an 8MB PS2
72pin SIMM module (normal or EDO). I've got it myself, and it works
fine. Email aixit@aol.com for more details.

Stupid question maybe. But i have a Falcon with internal IDE drive & use MagiC v5.03, after MagXboot.Prg as kicked in it still accesses my floppy drive, so why then?

Hi Richard.
Good to see you're still "on the scene".

I've had various Gemulators and lately magic pc
(after reading your faq), but alas, I've still never
seen the Gemulator running!

I've had numerous attempts to get it working
including dumping my 192k ST os as a TOS.IMG
file, and using the magic_pc.os, but it always just
displays a white screen, or when using magic.os
shows some german text which I think refers to
a crash!

I recently downloaded GEMulator classic....
Yes, you guessed it, I can't get that to work either!

Does the damned thing work at all?

I emailed darek the author, but his reply wasn't of
any help! Does he actually want anyone to see the
bloody thing working? Seems not to me...

Is it me, or are there absolutely no instructions
or even a hint as to how to set it up?

Well thankyou Richard, at least you are attempting
to help us poor souls out here.

Gary Wheaton, former Budgie UK author.

> if I may say....

The idea of the emulator is to emulate the machine you have, there is
little or no point in getting an emulator if you don't have the software
to emulate already. I believe there are PLENTY more chips out there,
there is fair bit of stock just sitting there and I believe JTS have
given the permission to some companies to distribute it. Anyway you
could alwayg Get MagicMac/PC and you then don't need TOS.

> that will fix my drive!

I have most Atari software that I could ever want, the only thing that I
didn't like with my St was the lack of speed and it's tiny colour
pallette, however it's a fine computer for many people.
Just buy a new drive, over here they can be picked up for a few pounds.

> Thirdly, do you really think JTS cares anymore?

Did Atari ever?

> They have 1000's of unsold Jagars stuffed in a warehouse which they
> can't get rid of!!

I believe they were all bought up a few months ago actually.

> And trying to get people kicked off internet access
> providers is ridiculas!

Nothing to do with the Ataris really, it's piracy, the ISP decides the
policy not us Atari users, if their users are breaking their policy then
the ISP will enforce it.

> Enough of these stupid accusations. JTS has
> better things to do with their time going after pirates of an absolute
> ST platform.

The Police have better things to do than go and prossecute ever petty
theft but it doesn't make it right.

I did have Diamond Backup and I don't recall having any probs with my
ZIP when I tried, although I didn't use it because had less than 200
Meg on the HD and so I just used Kobold and 2 disks instead. I take it
that this disk works fine in all other ways? From memory in DB3 you
want a Full Backup to Hard Disk and then just go for it, maybe you were
trying a partition/GEM copy? Formatting & Partitioning should take about
10 mins from what I remember, I always used ICD for my formatting stuff
and it wouldn't allow you to do any "wrong" partitioning and I don't
recall HD Driver doing anything dodgy either.

# 4666. Atari Computing Press Release

Newsgroup: comp.sys.atari.st
Date: 1997-03-08 00:00:00 UTC
From: cgood@cix.compulink.co.uk
Message-ID: <E6qM3z.8Az@cix.compulink.co.uk>
Source record: 126240

```
TITLE: Press release Update
Press release 8 March 1997
================================================================================
Atari Computing was launched during the summer of 1996 at Atari shows
in London and Birmingham and completely sold out on both days!
Delighted by the response we reprinted Issue 1, and increased the
print run for issue 2. Both have now subsequently sold out.

Mike Kerslake, the publisher, with over fifteen years experience in
the industry has teamed up with Joe Connor, ex Reader Disk and
PD/Shareware editor for Atari World, to create this new printed Atari
magazine.
```

So far Atari Computing has featured contributions from respected and well connected Atarians including: Frank Charlton (STF features editor), Graeme Rutt, Jon Ellis, Nial Grimes, Mark Baines, Denesh Bhabuta, Carl L�fgren, Harry Sideras and Kev Beardsworth (Atari World regulars), Colin Fisher-McAllum (42BBS/AtariPhile/FFF), Howard Carson (Current Notes), Xav, Thomas Binder (ST Computer), Al Goold and Ed McGlone (STAG), Roy Goring and Chris Good (WAG), Richard Spowart and Chris Holland (Maggie), Steve Llewellyn (Calamus User), Jim Hornby (Wrinklies), Martin Milner (999 software), Colin Polonowski (Atari Times), Neil Martin, Mark Wherry, Andrew Harvey, David Stevenson, Robert Paton, Thomas Mains, Colin Munro...

```
We've also signed deals with the two leading disk based magazines,
AtariPhile and Maggie to publish regular sections within the magazine.
If you've never seen a disk magazine before we think you'll be amazed
to find out how much you've been missing!

Atari Computing on the World Wide Web
-------------------------------------
Atari Computing now has an official WWW site at:

http://www.tachyon.demon.co.uk/ac/index.htm

So if you have web access why not pay us a visit and leave a message.
There will be a major update with every new issue of Atari Computing,
and it provides an excellent taster of what you are missing if you
haven't subscribed yet.

Background
----------------------------------------------------------------------------
The closure of Atari World and ST Format during 1996 left the UK
without an Atari specific newstand Atari magazine for the first time
since 1987.
```

The men in grey suits expect us to move onto other platforms but hang on a minute, let's take stock of the situation...
- Atari machines can be purchased and repaired on a shoestring
- Atari machines can produce superb printed output
- Atari machines can surf the Internet and run BBSs
- Atari machines can form the nucleus of a digital music studio
- New software of better quality than ever before is still being released!

That doesn't sound like a dead platform! The Atari platform has been emulated by just about every other platform, we're owners of cult machines! Have you ever noticed ex-Atarians animatedly talking about the 'Good old days' it's a feel good factor missing from all the current machines.

We don't need a new platform but we do need information and a printed magazine is undoubtedly the best way to ensure we see in the millenium!

Apart from a darn good read the other thing most of us like is some new software to play with. The Reader Disk concept offers all readers the chance to get their hands on the hottest new software around along with exclusive versions not available anywhere else. We offer a Reader Disk to accompany each issue, buy it or not, the choice is yours!

We need is your support, it's going to be tough to keep going and it really up to *you*! Instead of wishing us luck post us a cheque to order your copy today!

Ordering
==========
As we're sure you'll appreciate launching a magazine in a declining market is a very risky venture and our print run has to remain conservative - we can't afford to maintain a stock of back issues for long.

We're not a newstand publication so don't bother looking in the shops. The Atari platform needs this magazine and we need your subscription so do yourself and us a favour, take out a subscription or order an evaluation copy today! If you decide to subscribe you will receive the first available issue, if we've sold out of an issue your subscription will start with the following issue.

Subscriptions
----------
Many of you (and most of us) lost money following the Atari World debacle and we're determined not to make the same mistake. Atari Computing subscriptions are refundable at any time. Cancel your subscription in writing and we'll return any outstanding credit to you, minus a deduction to cover our costs.

We are continually receiving new subscriptions. As we only print "what we need" of each issue, this means that if we have run out of a particular issue, your subscription will start from the following issue.

Contacts
---

Telephone:
----------
Unfortunately we have had to withdraw our telephone enquiry service due to the large number of calls, many at unsociable hours, from people who thought we were operating a general Atari helpline, rather than being there to answer queries on the magazine. This helpline is now closed, and callers will simply hear a recorded message to that effect.

Therefore all future enquiries about any matter concerning Atari Computing MUST be made in writing either via email or by snail mail. And sent to the following addresses. It would also be helpful if letters, subscription enquiries and editorial material were on seperate sheets within the same envelope. Ideally letters and and editorial should be on disk in ASCII format, or via e-mail or netmail if you have that facility.

Unfortunately we cannot enter into personal correspondence on general Atari matters although we will obviously answer all specific Atari Computing queries.

General enquiries
-----------------
Atari Computing
"Rois Bheinn", Overton Crescent,
Johnstone,
PA5 8JB
Scotland

Please enclose an SAE for reply. IRC if enquiring from outside UK.

Email: ataricomputing@cix.co.uk

Subscription Payments:
----------------------
These payments should still be made to the address published on
subscription forms, which are available via email or snailmail.

Receipting subscriptions:
-------------------------
Just like every other magazine, your payment being cashed is your
receipt. We cannnot issue receipts by e-mail, SAE, postcard etc.
because of the additional work this would place on the volunteer
staff.

Issue gone missing? Faulty reader disk?
---------------------------------------
Write/email the office or leave a brief message on the answerphone on
01206 852602 and we'll sort out the problem as soon as possible.
Please don't use this number for any other reason - we won't respond
anyway so save your money and our time!

About the magazine/Who are we?
------------------------------------------------------------------------
The launch of Atari Computing was financed by the Atari Computing
Group, based on CIX, and dedicated to supporting the Atari platform -
We're delighted with the response from our readers and are working
hard to ensure future issues maintain and improve the same high
standard!

Atari Computing is an enthusiasts' magazine compiled and distributed
by Atari enthusiasts. We're not a publishing company so our efforts
have to be directed towards getting the magazine out on time - we do
not operate an Atari 'helpline' but are pleased to help wherever

possible via the Q&A pages in the magazine.

1997 UK Atari Shows
---
Mike Goodman, the organiser of the successful Atari Shows last September, has confirmed three Spring Atari Shows will be taking place in April and May at the same venues as last time (and the addition of a Scottish show):

- Saturday 26th April: National Motorcycle Museum, Birmingham - probably in the Compton Suite.

- Sunday 27th April: Osterley Four Pillars Hotel, London.

- Sunday 11th May: Central Hotel Glasgow (NOW CONFIRMED!!!)

All shows will be open from 10am to 5pm, and most of the exhibitors from the last shows plan to attend. Admission will be £5 for adult until 2pm, £3 after. Children are £1 all day

Exhibitors include Goodman's, System Solutions, Titan Designs, Black Scorpion, The Upgrade Shop, Console centre, FaST Club, HiSoft UK, 16/32, Portfolio Club, Calamus User, Atari Computing, Sunrise Audio, Floppyshop, BeST Electronics, Disk mags, User Groups...

Atari Computing have a stand at all shows, so make a note in your diary to show support for the Atari scene and tell us face to face what you'd like to see in the magazine. Even better bring along some articles or software we can use in the magazine!

Full details will be included in Atari Computing issue 4, but if you'd like to exhibit or require more details contact Goodmans:

Tel: +44 (0)1782 335650
Fax: +44 (0)1782 316132
Goodmans, 16 Conrad Close, Meir Hay Estate, Longton, Stoke-on-Trent, ST3 1SW (enclose SAE for reply).
---
Please spread this Press Release far and wide:

* BBS SysOps please post this to your local areas...
* If you have Atari Web pages please post this there...
* User Groups, publicise the shows at your meetings and organise car shares...

The Atari platform is alive and well!

Best wishes

The Atari Computing Group A|C|G
Al

> My sm124 monitor has died. Suggestions??

If you, like most of us, opened the case and increased the size of the picture, there is a good chance the replacement of a couple capasitors will fix your problem. Total cost should be less than $15. Years ago I download instructions from Genie on how to do this repair, it was not difficult. That file should exist on other Atari FTP sites. Look for references to dead monitor, sm124.

If you can not find anything, e-mail me your address. I think I kept a printed copy of the instructions. I will copy and mail to you

The OS should be on ROM chips. Insert blank disk in drive one and turn on
the computer. The monitor should display an bright green color with at
lease one
disk icon and a trash can icon. If this is what you have, drop the left
most menu and find the copyright dates of the ROM. Once you know if you
have ROM 1.0 or 1.04, (by the copyright date) you can look for the correct
set of patches/fixes and accessories to make the computer work reliably.
You should be able to get this off any Atari FTP site.

I assume you are using TOS 1.00. If so, first get enough PC formated
disks to copy the set of disks you what to move to your MAC. I have found
that my Mac, with the SuperDrive can read 720k pc formated disks. Copy
the info to these 720k pc disks and see if your Mac can read. If you have
an older Mac with the 800k drive you will need to move the files with a
null modem cable using terminal programs on both the Mac and Atari.

Back to his original question! There was a European program along the lines of Ultrascript, but it used real Postscript fonts, instead of the clumsy solution that you had to use to get a decent output from Ultrascript. Thing is I can for the life of me remember the name of that program!!

If it only occurs after partitioning then surely this is not a big
problem as you hardly have to do it every day!

> This sounds like a bug in MagiC5 or MagxDesk? Any ideas?

I used ICD to format my disks, I think they were formatted TOS/AHDI
compatible as I don't recall a DOS option and I had no problems
whatsoever with Magic v4, it may be due to the new Magic filesystem
support which tries to read the disk, sees that it's DOS and then that
the partitions are >32 and then bottles it but this doesn't seem too
likely to me.

> BTW, when I boot my Falcon says SCSI ID 0.0 is ZIP drive and 5.0 is
> Falcon030. Is this correct?

Doesn't sound right to me, but if it works then all should be OK, I
doub't it has anything to do with the problems above, HD Driver sees the
Zip as 5 on my ST, is all the termination OK?

Well. You can get a Falcon 030 with Cubase Audio, JAM OUT8 and JAM IN2
for the same price. :)
You won't get this equipment for the Mac at that price. Trust me.

You need 2 folders out of the archive - one is NODESK and the other is NOSYS100 as I recall. The total archived ZIP package should be around 900K or more - are you running MagiC? Is there a NODESK.OVL file in the NODESK folder? If so, you edit the MAGX.INF file to specify the SHL to be C:\NODESK\NODESK.OVL so that MagiC simply calls the OVL file and not the NODESK.PRG itself.

If you need the English package, I have it - the one edited by Howard Carson and the TAF group in Toronto. I could u/l it to you if absolutely necessary but it is a little big! Nonetheless, I'm happy to help out!

I can't imagine any possible way that Atari Notator SL will run on a
PowerMac or any Mac for that matter. Even in emulation with MagicMac,
there is no cartridge/dongle port; hence, no Notator. To the best of my
knowledge, Notator was not made for the Mac.

Logic is an alternative, but I personally would prefer to go back to
Notator (and probably will if I ever get my Stacy back).

>--
>Best Regards,
>JP.

I am the original poster for this thread and I have an honest scenario to present. I tried a 7500/100 Power Mac for six months last year to use as my main computer and as the center of my little home studio. I tried two different 32-channel interfaces, plus Performer 5.0 and a demo of Vision 2.08.

Often the computer locked up for no reason when using the interfaces. I obtained updated OMS drivers for Vision, and something for Performer (I think FreeMIDI?) off the web sites. Neither seemed to cure the problem. Also Opcode could not promise a working version of Studio Vision Pro for the 7200/7500 because of time sync problems with audio and MIDI; this was going on at Opcode the entire six months I owned the machine.

Secondly, I found it annoying that I had to fire up the computer and sequencer before my synths made any sound. It seemed to be due to the MIDI hookup to the computer. This also often disrupted whatever else I was doing (PPP connection mainly).

Third, both MIDI interfaces occupied both serial ports with a pass through for each. Whenever I flicked the switch to use the pass through, I could use a modem, printer, quick cam, etc. With the quick cam, frame rate dropped from 15 fps to 2.5 fps. With the modem, I experienced intermittent drop outs in file transfer and generally very slow performance on the web. I triple checked this back and forth to make sure it was the interface. This was unacceptable, and powering off the machine and disconnecting the various peripherals is ridiculous.

I gave up, sold the computer, bought a couple of nice synths with the money and used internal sequencers ever since. After looking into the ST, it appears to be a very cheap way to get more power while I still keep my main computer separate from the studio.

I wanted to throw this on the net and see what people thought of it. Please keep in mind that I appreciate Macs, PCs, and Ataris for what each model is capable of and while I have preferences, they are not relevant to this post.

Regards,
Jamie

I think you'll find it's the formatting that does it. I just partition
them. DB3 used to freeze up all the time when I formatted them.

>
>If it's important enough to bugfix, recompile and make available for the
>distributors, how come it isn't important enough to write half a dozen lines
>about what benefit the improvement brings (if any at all)?

Here are the most recent changes to NVDI - cut from ATOS 9701:
(Sorry, german only)

-------------------------------------------------------------------------------
```

Seit dem letzten Mailing im M�rz 1996 gab es bei der Version 4.11
mehrere kleine Updates (die aktuelle Version ist NVDI 4.11 r7). Hier
eine Auflistung der Neuerungen:

```
Release r4:
Der Querdruck auf dem Atari-Laser funktioniert wieder. Um auch
auf getunten STs mit alternativem RAM (z.B. PAK 030 mit Fast-RAM)
keine Probleme zu bekommen, fordert der Treiber Speicher explizit
aus dem ST-RAM an.
```

Release r5:
Die skalierende Variante der Rasterfunktionen wurde f�r den Fall
korrigiert, da� bei einer Bitmap im Speicher das Ziel in der
Bitmapbeschreibung (MFDB) nicht mit Null angegeben war. Der
Fehler kann entweder mit PATCH_NV.TTP (V1.03) oder einem
Diskmonitor behoben werden:

```
suche:
3e 2d 00 0c 3d 47 01 dc-53 47 ce ed 00 08 de 47
3d 47 01 da ce ed 00 06-2d 47 01 de
und ersetze durch:
49 ee 01 dc 3e 2d 00 0c-38 87 53 5c ce ed 00 08
de 47 3d 47 01 da ce ed-00 06 28 87
```

PATCH_NV.TTP (V1.03) liegt dem aktuellen NVDI-GUIDE sowie der
vorl�ufigen Beschreibung der neuen systemweiten Druckdialoge
(WDIALOG 1.92�) bei.

In den Druckertreibern konnte es bei der Ausgabe am Anfang der
zweiten Seite zu Fehlern kommen, wenn die Applikation ausschlie�-
lich mit Rasterfunktionen ausgab, kein Clipping-Rechteck setzte
_und_ wenn nicht gen�gend Speicher vorhanden war, um die
Druckerbitmap direkt aufzubauen. Diese Probleme konnten bei
Signum und Script auftreten.

Release r6:
Ein Absturz bei Zusammenarbeit mit dem NOVA Grafikkarten-VDI
wurde behoben, der dann auftrat, wenn Text gedreht und mit den
Attributen umrandet und unterstrichen ausgegeben wurde (also der
Unterstrich aus mehr als nur einer Linie bestand).

Auf vielfachen Wunsch ist die Mausbeschleunigung nun per Vorein-
stellung ausgeschaltet. Der Controllfeld-Server COPS und eine
neue Version der Fensterdialogroutinen (WDIALOG 1.11) werden
mitgeliefert.

Release r7:
Die Routine f�r sehr komplexe Bezierz�ge (falls mehr Koordinaten
erzeugt w�rden, als eigentlich in die VDI-internen Arrays passen)
wurde korrigiert. Wenn noch Hauptspeicher vorhanden ist, wird f�r
bestm�gliche Darstellung Speicher alloziert, anstatt die
Bezierqualit�t zu verringern.

Das Fontcache-CPX ver�ndert jetzt nicht mehr ungewollt die
Mausform. Wenn ein Rechner mehr als 32 MB freien Speicher hat,
werden keine negativen Gr��en mehr ausgegeben.

Die neue COPS-Version (1.05) wird mitgeliefert.

1. It could be that you ARE resorting them but you are not selecting
UNSORTED on your window view.

2. The best program to resort your Auto folder is Autosort from E Sothan:
tel (USA) 503 283 4566 or a good pd.

: references to dead monitor, sm124.

I have repaired several SM124 monitors, and the problem was either the flyback, which any repair shop (therein lies the rub) can get for you from Best Electronics, or the 2.2 MFd non-polarized electrolytic flyback resonating capacitor, sloppily placed right next to the flyback swtich transistor heat sink. If you replace it, put it on the bottom of the board. I found some free polycarbonate caps, and built a 2.2 MFd out of those.

That failure mode has to do with age, IMHO, and has nothing to do with overscan the cheap way.

>that many Applications installed and my Desktop covered in Icons :))

Almost everything about creating the NEWDESK.INF you can read in a
file SURVIVAL.TXT by Thomas J Hopper (on many ftp servers).

NEWDESK.INF should not be bigger than 4096 bytes (for TOS >2.0).
Problem with memory begins after crossing approximately 3900bytes.
To avoid this are two ways: to allocate memory, or (the better - I
think so), to prepare some different desktops according to the job I
have to do (for DTP, comms, music and so on).
You mast remember that number of icons on a desktop is limitated to
36 (?).
On main desktop you can place icons representing dedicated desktops
(DTP, comms, music and so on).
Clicking on these icons you can change desktops in a fast way.

To arrange so comfortable environment you need a program
LOAD_INF.PRG, to be find on: ftp.cs.tu-berlin.de (130.149.144.4),
directory /pub/atari/, on other ftp servers also - I believe.
How to install this programm you can find in the SURVIVAL.TXT.

chrisTiaN....

Once you move the programs out of the AUTO folder to some temporary location, you _must_ DELETE the old AUTO folder. Otherwise, if you're copying the same programs back into the AUTO folder, they simply are written back to the same sectors as the old copies and the FATs are simply updated.

If you have XBoot you can rearrange the execution order. You can use AUTOSORT.PRG as well.

Regards,
Keith

# 4691. Gemulator

Newsgroup: comp.sys.atari.st
Date: 1997-03-09 00:00:00 UTC
From: Tom Wilkinson <twilkins@solarwinds.com>
Message-ID: <332344B7.389D@solarwinds.com>
Source record: 126180

This morning I got Gemulator Classic working with Tos 1.62 and it does work!

On a note of frustration on the creator of this great program, I have been trying to buy Gemulator 96 for a couple of months now.

After reading about the trade-in offer which said he would give x amount for a magic sac cart and x amount more for a Spectre GCR, I emailed Darek to ask how much trade-in value he'd give on a Spectre cart (no gcr - just the smaller cart without the cable). He emailed me back that it was very plain on his website how much trade-in value he gave.

Then I emailed back to see how much it would cost to ship Gemulator to Canada. I see on the website that it's $69.95 U.S., but how much extra for shipping?

I got another reply from Darek, again, the cost of shipping is on the website.

Now maybe I'm blind, but I can't find any reference on shipping to Canada or trade-in value for a non-GCR cart on www.emulators.com. If anyone can enlighten me about this, I would appreciate it.

It is very frustrating to want to buy something and not be able to.

I have to disagree with those who say pacifist is better than gemulator (just my two cents). Until it has more than one meg of memory, it will be of very little use to me. The person who used a 512K ST for years obviously never ran any serious application progs.

Try running Calamus SL on less than four megs. You're highly restricted in modules and fonts. Calamus SL runs much better on Gemulator Classic with eight megs of memory than it ever did on my Falcon. It flies along, and I haven't been getting so many system crashes.

Pacifist also does not appear to set the screen colours properly in mono mode. It does appear to be a fine developing program though, and the more emulators to choose from, the better off all of us users are.

Tom

> | "Who is General Failure and why is he reading my disk?"

That's a great one Richard!

---

Yes, I downloaded 'classic' after reading your FAQ but couln't get it
working.

Two main problems immediately arose:

You said, "Place GEMUL8R.EXE, and MAGIC_PC.OS in your
directory, as well as the .VHD and STHDBOOT.SEC files.

------?????

I finally managed to get the Magic_pc.os, thanks to your FAQ 1.00, but,

-what are these ".VHD and STHDBOOT.SEC" files?

They don't come with the GEMulator 'CLASSIC' (or with my magic_pc copy)

and they don't exist on my pc.

So where does one obtain them? Or do you make them yourself? Or what?

------????

Create the GEMUL8R.INI file. You can use the one below. See 2.2.3 for a
breakdown of what each line does.

```
rams 8
mono
quick
com1
disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd
magic magic_pc.os
```

---
I had some trouble with the above (though it might just be my own stupidity
/drunkenness, etc)....

The vhd things again mainly. But what if mono is not required, does
colo(u)r
serve equally well?

> Incidentally, I think TOS.IMG is not just a dump of any ordinary ROM TOS;
I
> think it's a kind of executable version or something, not just a dump.
That
> might explain why that wouldn't work...

Yes Richard, when I got the reply from Darek, he said a similar thing;

;-Just dumping a copy of the TOS rom is not the same thing as the disk
versions
; of TOS Atari used to relaese in the past.

---

This is obvious enough as a relocateable program file has info attached, so
it
can be loaded at any legal address, relocated, using this info, then run.

But what difference does this make to an emulator running on a different
CPU?

Surely one can set the PC (program counter) as if it IS at the correct
address,
and I am sure the ROM versions of TOS don't have relocateable header
info...

They will just be hard code to absolute address $fc0000, or whatever,
depending
on the version.

So, I am hard pressed to make any sense of the GEMulator situation, and have
been recently persuaded to try PaCifiST, which I find easy to set up and use,
also it seems to have awesome compatibility (especially since it's free).

It runs most stuff I have tried uptill now, games, utils... The only things missing
are the HBL interrupts (rasters) and sound -though the author does promise sound
emulation soon and says hbls are possible using VBE2.0 ? {what's thiz?)

Well. that's all I can think of for now, hope it's of help to someone.

PS your ST NEWS mag was excellent, bit late to tell you I know.

Good luck in all ventures, Gary.

HS>> all)?
SS> Well if they are bug fixes or compatability tweaks you may not see any
SS> benefit, but i'm sure Rob would have said if he'd known, he's always
SS> been straight with me in the past.

Let's get this straight: you don't know of any improvement, neither does the
UK distributor, you guess there may be bugfixes but you don't know and you
rely on the fact that someone else who doesn't know hasn't told you anythin

If it's not relevant, doesn't fix anyting or I don't understand the fix, it's
an easy decision - I won't bother getting it. Sorted.

HS>> I find this ridiculous tbh... B^{<
SS> You just like a good moan you do. 8~))

I do, but I'd also like the NVDI problems I've always had to be fixed. If r6
fixes them, good...

My hardware setup gives particular problems that others don't get. It also
has no problems where others do. The decision on whether it's useful to me
depends on what the fix is. It's my decision to upgrade and I'd like the
information to do so. Then again, the improvements that came from v3 to v4
weren't much to write home about - I don't know what i should expect with
this one...

Try without MagiC

>Doesn't sound right to me either. It does seem to work. But I was hoping a
>Falcon owner could post in here and say 'yes' or 'no' :)

You have activated Bus-Arbitration?
Why?
If your answer is "yes" set Falcons ID to "7"

Takt the rest for some SCSI devices.
Some old device drives stop scanning devices if you have a hole
in the ID line 0---1---2---3 hole AHDI can't found devices after that hole.

Regards, Robert

>ST. The hard drive is bad so I need to get the images. Second of all we
>are talking about the "ST" platform! Which doesn't exist anymore. No
>support, barely any new software etc.

I can't say that I can agree.
The *company* Atari doesn't exist, but as far as us users are concerned
they've never existed! They've made excellent hardware, surpassing
competing systems at the time, at a much lower prices. But as usual Atari
has missed the opportunities again and again by doing very little to
promote their products and support them.

As for the platform itself- it *is* certainly alive! I keep coming across
new software all the time, and new web sites as well.
If the ST platform doesn't exist any more- why would all these
emulators/operating systems for other computers be made?

>I can't even find a dealer near me that will fix my drive!

You have my sympathies there. There isn't axactly an abundance of ST
dealers around the globe, but the ones that are left seem to be mostly
serious companies who do what they can to keep the relatively small crowd of
faithful followers happy.
As for your harddisk- if it's the unit itself you should be able to get
help from just about any PC dealer. If it's more Atari specific stuff there
are several dealers you can contact. I'm not sure where in the world you're
located so I don't know which store would be the closest to you.
I'm sure others in the newsgroup can help you with that.

>Thirdly, do you really think JTS cares anymore?

Well, that's sort of beside the point. The point isn't whether Atari is
dead or not- the point is that we have copyright laws and we should abide
by them. As for the status of TOS- I think they sold it to some other
company or something, so it's not "dead" as you say. There are still TOS
computers being produced, which are more up-to-date hardware wise than
Atari's own machines (I.e. Hades, Medusa, DirecT040/060, Eagle...).
I'm sure they wouldn't be too pleased if they found out that people are
ripping off their operating system software and will probably do whatever
they find necessary to stop it.

>I myself was a true hardcore Atari ST
>fan but times change. Then again that is my opinion! So stop flaming me!

Just a side note... I don't know how many people this would help, since some might not own an ST who are needing TOS images, but if you do own an ST, then there's a program called TOSDUMP on one of the STonX pages. I don't think it's illegal to make copies of TOS for your own use if you already own the machine, is it? Maybe I'm speaking to the wrong crowd, tho, so I appologize if I am! Just a thought!

>cost you a good $100...

TOS 2.06 for $100? I don't think so!!! TOS 1.4 or 2.06 costs about $60 new (cheaper if used). Don't want TOS? BUY MagiC 2,4 or 5. Prices go from $60 to $100 new (again cheaper if used).

I bet all these people asking for TOS images (and who don't own a TOS chipset) STEAL ALL THEIR SOFTWARE on the PC too. These people make me sick.

Message-ID: <01bc2c4f$3c6f58e0$4e90b8cd@default>
Source record: 126260

Need some help... I have two SF354 floppies with no power cords. I have been able to power one up by using a power cord from my IBM pc. Other than the power cord problem, I dont have any 360k disk and I cant format a 720K disk down to 360k. I want to know if anyone has tried to use a 1.44floppy drive but use 720K disk. I do not have any disk or software for the computer so I am willing to try anything so that I can start downloading programs from the net. YES I have tried to find a 720k floppy drive but they are few and far between.

Any information would help.

Message-ID: <3322B58E.3D0E@ix.netcom.com>
Source record: 126262

dear...

luckily, the current arrangement of the files in my auto folder doesn't cause any problems when autobooting. however, i will, and do eventually want to rearrange them. i've tried the move all the files to an empty folder and place them back in the auto folder (in desired order) method, but this doesn't work. (it goes back to my default, which is by name) i've tried the one or two programs where you would type in something to the degree of c:\auto\program 1 program 2 program 3, etc... and using neodesk, i've tried using the re-order/rearrange function, and the screen turns white for a second or two, busy bee comes up, seems like the program is executing, but then the files return to their original order in the auto folder. the HD partition is not copy protected, but the boot and root sectors are. any suggestins/answers/explanations??? thanks...

# 4708. Q:Atari Mega ST, how to skip programs at the start??

Newsgroup: comp.sys.atari.st
Date: 1997-03-09 00:00:00 UTC
From: ut13@ab293.rz.uni-karlsruhe.de
Message-ID: <5fu404$fcv$4@nz12.rz.uni-karlsruhe.de>
Source record: 126264

Hello,

I have installed an accessory program in my auto folder. It didn't work ant
the computer rebooted again and again :-(. I didn't know how to stop it.

At the end I did it after a lot of tries to turn off the power of the HD at
the right moment. I guess this wasn't a good idea, but only this helped.

Can somebody tell me how to avoid such situations and how to overcome them,
when they are already reallity? I have TOS 1.02 and a MEGAFILE 20, the
floppy works OK.

Regards

Guentcho

It is when you've just bought a pack of disks and want to format/partition
them all! Point is, it is a problem! I'd be really interested if anyone else
using MagiC5 has this problem.
It's also a prolem when I boot my Falcon with no disk in the zip drive.
Once booted, I put a disk in the drive ('cos I want to use it now), and hey
presto MagiC gives me error -46 invalid drive. Reboot necessary. :(

>> This sounds like a bug in MagiC5 or MagxDesk? Any ideas?

Sounds more than likely to me. The Magic filesystem is a tad shaky.
Still, perhaps they've fixed this in the forthcoming 5.10 issue?

>> BTW, when I boot my Falcon says SCSI ID 0.0 is ZIP drive and 5.0 is

It's the something for nothing syndrom. All pece ( I like that:)
users fell that because they get Windows and DOS from their
friends, that all software should be free. After all, they did
actually buy a computer!

I had a long reply to this post last night, but between the
second and third Bacardi I lost it:). I do remember the last
part, which at the time seemed funny. It went something like
this.

Hey Chris, when I finally purchase my T060 I would like you
do deduct the cost of the royalites as I only wish to "test"
TOS 3.06 and am not sure if I will like it or not.
Sounds like the same thing to me.... What will happen if
Mr Gadget comes out with his TOS 3.06 emulator? Will we
then be flooded with request for TOS 3.06 images? I hope
that both Medusa and Computer Direct look a little into the
future with this upcoming problem. Maybe with a little
group effort, something might become of it. How do you
all think C-Lab would feel having something given away
they had to pay good money for......

For the fun stuff. If I install my unused Gemulator card
into the ISA slot on the T060 and run TOS under a Pentium
card would I be a dirty double TOSser? (Sorry Tony:).

If I install a Gemulator card into the ISA slot on the T060,
run the emulator under the Pentium card, but instead of

using the TOS Roms, run MagiC, would I be invisable?

Well, it was funny then:)

Mike

# 4712. TOS dump on GEMulator

Newsgroup: comp.sys.atari.st
Date: 1997-03-09 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.030997.134356.56@wxs8-6.worldaccess.nl>
Source record: 126268

Say...I think dumping your TOS into a file - straight from ROM - does not
produce a file such as TOS.IMG. Am I right in assuming that TOS.IMG is a
special kind of executable file, not just a straight TOS dump?
Let me know...this is the kind of info that needs to make it into the FAQ.

Hi again :)
This time my trouble is with Newsie!
I would be happy if you would reply this by email
because Newsie will not work :)

My problem is:
I go to connect to host when I first run in Newsie
I then go to read off line and it starts downloading c.s.a.s
Sadly it then changes its name to "up" and then I have to
resubscribe to c.s.a.s and then all my news files is in
"up".. Why does it change name??
Can anyone help??
REMEMBER please reply by Email!
Thanks in advance :)

# 4718. Java for Linux/68k?

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: avg@cwi.nl
Message-ID: <avg.858001040@news.cwi.nl>
Source record: 126123

Is there any way I can set up my Atari TT with a cable to
my Linux/i86 machine so that I can play remote Java games
with two people?

After spending over 2 years messing around with a refusing
combination of HS-modem and MiNT-OS, I was thinking about
installing Linux/68k. But since there seems to be no
Netscape for Linux/68k, is there a version of the JDK
or similar Java development material?

# 4719. Using TOS image file on a real ST

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: bales@garonne.stortek.NOSPAM.com
Message-ID: <E6u04w.D3L@gazette.stortek.com>
Source record: 126124
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have an STFM with TOS 1.2 and an STE with 1.62. I have made a TOS image of the 1.62 ROM. How can I make the STFM boot with the 1.62 TOS image ? Does the ST check on the boot disk in search of a TOS file ? How should I name the file so that the ST recognizes it ?

Another question:

The STFM has a 6 chip version of the TOS 1.2. Can I put the 2 chip 1.62 version in two of the sockets and have the STFM recognize them by setting a jumper on the board? Or will I have to write the two chip 1.62 onto 6 EPROM chips ? How would I do that?

## 4720. Tape Backup Drive and Diamond Back III

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: ebaiz@qtm.net
Message-ID: <5g17cu$6b5$1@news2.qtm.net>
Source record: 126125

I finally found a tape bckup drive that works well with my Hades 060 and Diamond Back III. It is the CTM3200 by Connor. It is a 2gig/4gig drive and was only $139 from Corporate Systems Center. I have never had a hard drive crash, but it is nice to know that I have my data backed up.

>on the HD accessible.

Ah, then you need to download AHDI from one of the many ftp sites. Unzip it to a floppy and run AHDI.PRG (with the HD turned on) and it should display a "bootloaded" message. Then use the Options menu to install an icon for C: drive (use uppercase, the lowercase c: is actually the cartridge port) and you should be able to access the HD, if it's working.

Once you verify that it works - buy HD driver. It's WELL worth the price.

Try to be the best of whatever you are, even if what you are is no good.

You can't unless you have a piece of software to go through the TOS image and relocate every single address in it to an appropriate address in RAM and load the image to that area. Off hand I know of no such piece of software though I remembering hearing something about one being developed a few years ago.

> Does the
>ST check on the boot disk in search of a TOS file ?

No.

Dunno, I suspect not.

> Or will I have to write the two chip 1.62 onto 6 EPROM
>chips ? How would I do that?

Start with an EPROM blower I suppose, and see how TOS 1.02 is laid out on the current 6 chips...

Well, actually, yes, in a manner of speaking. If there is a bootable boot
sector on the disk in A:, it wil be executed - so if you happen to hae a
bootable TOS disk in there (TOS 0.98, or one of the developer's versions of
later TOSes), it will load TOS from floppy. However, that's not the same as
loading a ROM image - not even really very close.

Yes! That was the program I was thinking of! Nice thing about it was
that using Pagestream with Postscript type 1 fonts and composcript with
the same fonts, your output from the printer was identical to your
layout in Pagestream! This wasn't the case with Ultra script, as you
were using different fonts! Another nice thing is you didn't have to
have 2 different sets of fonts cluttering up your hard drive.

SS>
SS> I just checked the instruction book for my NVDI, and it states...
SS>
SS> "In this version NVDI incorporates Speedo and Truetype vector font
SS> scalers. An optional postscript type 1 module is also available.
SS> together with the new printer and image drivers.

That's correct, but using and printing with Postscript type 1 fonts is not the same as postscript output. The latter is a very high resolution, device independent page description language employing a standard range of 35 fonts, but which also deals with images of any type.

A postscript output file is (I think) an ASCII file of the exact position of every item of text and graphics on a page and will output at the highest possible resolution on anything from a 9-pin to an imagesetter, given the ability to process the text.

Software RIPing is possible through Ultrascript on the ST, which uses clones of the standard 35 fonts, or more recently using Ghostscript from Compo (a snip at 200+ukp!). A printer that contained a Postscript processor internally would typically cost a premium of approx 500ukp at one time - I think the HPIII Si was an example of one (but I could have got that one mixed up with another...).

This message from lamparty@concentric.net to All came in on a wing and a prayer...

Hi Thomas!

l> Back to his original question! There was a European program along the
l> lines of Ultrascript, but it used real Postscript fonts, instead of
l> the clumsy solution that you had to use to get a decent output from
l> Ultrascript. Thing is I can for the life of me remember the name of
l> that program!!

CompoScript. It was very expensive too, probably because of the cost of the license to use the PS fonts.

Since I can't follow threads in this area, I'm guessing that this isn't the answer to the question in the header, since CompoScript can only print PS files, not generate them.

Regards, Derryck

: >jumper on the board?
:
: Dunno, I suspect not.

Toad and some other companies have a 6-chip version of 1.62, so you can
most easily use that. I've seen no jumpers to set on an STfm, though I
have two of them, using two different boards, though there are on an STE.

> How is someone supossed to get a copy when there is no way of getting a
>copy because 1) the company doesn't exist anymore.

The hardware is all over the planet, and you COULD toddle on down to your local Goodwill or such and probably pick up an ST for less than $50 - I've seen them as low as $10.

>2) there is no more production of the software.

Either you are stupid, or deliberately lying. New software is announced IN THIS NEWSGROUP regularly. Oh, another possibility is that you're illiterate, I suppose - but then who's typing your articles?

>3)no more support!

See #2. Support is a matter of software authors who give a damn - if you think there's support for PC ware, try calling MicroSoft "tech support" some time. Have your major credit card ready, though, becasue it costs $35 just to say "I found a bug in MS-product X."

>4)just can't find a dealer nearest you.

You aren't trying. EVERY SINGLE MESSAGE I POST gives the URL to my pages, which contain among other things, a list of vendors (including contact methods for those who don't have email) and a list of some of the major file archives - so you could get far more Atari software than you have disk storage space for (or download time, for that matter).

>Then let's say you do pop $100 for the images.

Let's say you'd have to be an idiot to pay $100 for something that was originally priced at $60 - and TOS 1.4 chips usually go for about $30 these days. And see #1 above for less expensive means of obtaining the TOS ROMs legally.

>You get an emulator that only runs perhaps 20% of the software... I want to
>evaluate the the demo but you are telling me I have to pop $100 just to
>try it??

Nope. We're telling you that you have to pop for (probably) about $10 to $30 to get a real Atari ST. What you then do with the TOS is largely your business, as logn as you don't distribute it.

>That's ridiculus!! What if I don't even like the demo!!! If
>that's the case don't even put out a demo. Sounds like a con job to me

>if I may say....

Well, Darek Mihocka /is/ a MicroSoft employee, I beleive. ];^)

There are a couple of emulator demos that do NOT require a TOS image, though
- and if you had been paying attention, you would know where to get them by
now. Go back and read the part up in #4 if you really care.

>computer so I am willing to try anything so that I can start downloading
>programs from the net. YES I have tried to find a 720k floppy drive but
>they are few and far between.

You can put a 1.44 drive mech in there, Jeff, but it will require a little bit of soldering skill and some slight technical knowledge. The drive will then act as a 720k drive (you have to modify the computer, also, in order to get 1.44 megs).

If the drive won't format to 360k, there's a problem. 720k disks and 360k disks are physically identical - the only difference is in the formatting.

Finally, I suggest you contact Ben Smith (see his ads in this newsgroup, or go through my "vendors" linsk at my Web page) or someone else selling SF314 disk drives (or 3rd party replacements) - you can pick up a nice 720 drive WITH proper power supply failry cheaply these days.

You have to boot from floppy and then delete the ACC from your auto folder.

>At the end I did it after a lot of tries to turn off the power of the HD at
>the right moment. I guess this wasn't a good idea, but only this helped.
>
>Can somebody tell me how to avoid such situations and how to overcome them,

I hope you have AHDI or another hard disk driver on floppy already. Shut
everything off, then boot up the computer WITHOUT the hard drive. Turn on
the hard drive, and run AHDI.PRG from the floppy. Manually create an icon
for C: from the Options menu on the desktop; then you can access the AUTO
folder and delete the offending program.

In the future, you might want to try setting up a boot floppy with an AUTO
folder to try unknown programs in - it's much easier to pull the floppy out
and insert a different one if the new program does bad things.

>greatly appreciated. Thank you

Try Diamond Edge - if your're pretty sure the problem is actually with the
hard drive. A coldboot might cure the problem, if you have simply run into
the folder limit (not uncommon if you didn't allocate extra folders when
installing your hard disk software).

If you need Diamond Edge, I think you can order direct from Oregon Research,
or you can contact Computer Direct or Toad and see if they have it in stock.
Edge will "rebuild" a single partition if necessary - that avoids formatting
the entire drive.

I believe Midi Music Maker works pretty well if you're operating from a hard disk - floppy is always slow. If the files are small, and you have a 4 meg ST, you could create a RAMdisk and copy the files there to speed thigns up quite a bit and not have to lug around the hard drive.

Hi people,

The following stuff is for sale for a couple of reasons... I need
the money for my new Falcon AND I've got no space too keep it!

Therefore, I need to shift this stuff asap:

ST:

5ukp each or 10 for 45ukp (NOT INC P&P, NO SWAPS)

All originals, boxed + instructions.

3D Construction Kit
Adventures of Robin Hood
Another World
Archer Macleans Pool
Calligrapher Lite
Chaos Engine
Chase HQ 2
Crazy Cars 3
Cruise for a Corpse
D/Generation
Dizzy Collection
Dizzy's Excellent Adventures
Epic
Exile
F1
F15 Strike Eagle 2
Falcon + Data Disk
Goal
Golden Axe
Heimdall
Hook
Hudson Hawk
Hunter
Hyperchart
Indiana Jones and the Fate of Atlantis
Ishar 2
Jimmy Whites Whirlwind Snooker
Knights of the Sky
Lemmings
Lotus 2
Lotus 3
Master Sound 2
Magic Boy

Mega-Lo-Mania
Midwinter
Midwinter 2
Monkey Island
Parasol Stars
Pirates
Populous
Populous 2
Powermonger
Premier Manager
Premier Manager 2
Prince of Persia
Puzznic
Railroad Tycoon
Reach for the Skies
Robinsons Requiem
Robocop 2
Robocop 3
Rockford
Sleepwalker (STE)
Street Fighter 2
Striker
Supremacy
The Greatest (Jimmy Whites, Lure of Temptress, Shuttle)
The Patrician
The Simpsons
Transarctica
Utopia + Data disk
Zool

Jaguar Stuff (NOT INC P&P, NO SWAPS):

Doom 15ukp
Checkered Flag 10ukp
Syndicate 7.50ukp
Rayman 25ukp
Hoverstrike CD 20ukp
Tempest 2000 15ukp
Kasumi Ninja 10ukp

Lynx:

Atari Lynx 2, AC Adaptor
Desert Strike
Blue Lightning
Steel Talons
Dinolymipcs
STUN Runner
Electrocop

All for 60ukp NOT inc P&P

Playstation (25ukp each NOT inc P&P. May swap for good games):

Zero Divide
Doom
True Pinball

>how new is it?

Whew, lotsa questions! <G>

DB3 is very good; turtle is slow but it's free. DB3 supports tape; if
you're going to use a Zip or Syquest, you can get away with desktop copies,
but something like Kobold would be much faster.

You don't need any special handlers for the Syquest, and the Zip will owrk
with ICD if the disk isn't "locked."

HD Driver is from Uwe Siemet, and is updated very regularly; I have recent
acquired version 4.x and version 5.x (the complete packages came with used
computers I purchased) and HD Driver is now at version 6.x; I was a
long-time confirmed user of ICD, but HD Driver is faster and better (and
probably safer), and currently supported, so I'm glad I switched.

You should be able to obtain all of this STuff from Computer Direct or Toad.
email to info@compdirect.com or info@toad.net for, well, info.

> I'm don't have any way of backing up my hard drive except for floppies.
> I've heard good things about Diamond Back 3.

I wasn't too impressed by it myself to be quite honest, it's very useful if backing up to floppies and is probably the best of all the backup software but it's very tedious, floppies are slow enough but when you wait for it to compress the files too it's very boring, if howqever you data changes little then this shouldn't be too much of a problem.

> I have heard of Turtle.

My Fav' free one, I don't think it had compression though.

> What kind of hardware? Tape backup? Zip? Sequest removable?

I use a Zip, it all depends what you can get your hands on, the Zip is a bit slow compared to the Syqest but perfectly adequate for Backups, the Syqest is nice if you can get your hands on it but the older versions were not too reliable and I'm fairly sure the disks are not as rugged as the Zips. I've never used a Tape drivebut they do have the disadvantage that they are pretty much ONLY for backups, you can't run stuff from them or save at random.

> What handlers would I use for these hardware devices? I am using ICD's
> handler now. Would it work with these devices?

ICD should be fine, you'll need a software package that can handle tape drives for the backup such as DB3 or Gemar.

> For that matter, what is
> the best hard drive handler? I have heard of HDDriver. Who makes it and
> how new is it?

Uwe Seimet makes it and is a regular poster here and it is probably the best driver there is, it is still being developed so it's a new as today pretty much. It is a bit faster than ICD and has is more advanced with support for DMA background transfers, Bus arbitration and loads of othe stuff. However if ICD seems OK for you as it is then there is little reason to upgrade IMHO.

I'm sure that I had such a utility that would allow you to do this but I
can't find it now :( Gemram does do this but takes up about 700k so I
am told but ifyou don't mind that then it's quite easy to get hold of.

> > Does the
> >ST check on the boot disk in search of a TOS file ?
>
> No.

Not 100% true, the St does indeed check for a bottsector that will
automatically load TOS as used with TOS 1.0 thus the very long wait when
you boot up without a floppy.

My advice to you any anyone else with a Hard Drive is to go and buy
Diamond Ege before it's too late, it is the best util I ever bough and
has saved my HD loads of times, recovered files and optimised it
incredibly well and it will almost certainly fix your problem, I'd be
astonished if it didn't to be quite honest, it is made by Oregon
Research i don't have any contact details I'm afraid but they do have an
email address and I believe a web page too try a search engine, it's not
cheap but it's worth every penny.

Danger, Will Robinson! Danger! Danger!

The power plug on some SF354 drives has +12v where the PC-standard 720k or
1.44mb drive expects to see +5v! Plugging in without absolutely verifying
that the voltages are correct can cause a tiny puff of very expensive smoke!

MK>MagiC hasn't got any memory protection

Right. MagiC has got a detection. At the end of every allocated memory block there is magic key word (AFAIK "KROM" or something like that). If it is overwritten by software MagiC warns you. Pro: runs on every ST, no PMMU needed. Con: Doesn't protect your system.

There is MAGROM from Uwe Seimet which protects the MagiC binary code in the RAM if a 030 PMMU is detected.

JES>How can you say that?

Because I spoke to Andreas because of this problem last December. But perhaps I misunderstood you. I only know of the IDE timeout - as I had it on my Falcon. But I never had problems with the floppy.

JES>Partly correct, MiNT replaces some parts of GEMDOS.

Memory allocation and process handling, AFAIK. But not the disk routines ...

JES>But what has this got to do with the NVDI-problem?

I thought it is a MagiC problem?! MagiC is faster than TOS and MiNT. Compare to the PC: the best way to find out hardware problems is to install Linux. You'll never find minor bugs with DOS. (eeh, I don't want to say that MiNT is comparable to DOS, but I think you know what I mean).

JES>But Andreas Kromke has previously stated that there's no way to fix
JES>this,

How can software fix hardware problems? *If* the problem is the falcon hardware, then the only way to prevent is to slow down MagiC.

JES>If I use MiNT+N.AES my Falcon runs without a crash for hours

So do I when programming with MagiC (Mac).

BTW: TOS 4.04 waits three seconds for drive B: :-))

CH> JP> the Falcon SCSI port by replacing an IC. Does anyone know
CH> JP> anything about this? I believe it is the same SCSI controller
CH> JP> that is in the TT,

Right, it is the same controller. The problem is the DMA chip of the Falcon -
it is too slow. The same SCSI controller does 3,5 MB/s in my Performa. But I
don't think that it is easy to speed up DMA.
```

Never is a long time, but...

Java is a big language. The source and related stuff to port onto
the Atari (or any other) platform is around 10Meg. It would take a
single person years to get a sucessful port, and the language is not
standing still. If you worked for a year to provide last year's model,
the nay-sayers would have a field day.

JAVA is different than Javascript. Two language implementations,
twice the effort. You see what I mean.

It would take the combined effort of many programmers willing to work
on such a project, and frankly no one I know is ready to take on that
kind of effort. Yet :)

hold down the 'alt' key when booting. install drive C, and rename/delete that pesky
program!

## 4765. Opus 2.2 can I still register

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: ACA126@news.salford.ac.uk
Message-ID: <5g1j5r$7ls_001@salford.ac.uk>
Source record: 126170

I have found Opus indispensable on my ST (I did an entire Quattro Pro assignment on it for University and got _Very_ respectable marks)and now I want to register it. Does anyone know if this is still possible as I see that the program is now 8 years old.
If it isn't could anyone
point me to another spread sheet that is GEM but not LDW Power or Texel. It must be able to produce graphs as good as Opus in GEM Metafile format. And have statistical test's such as K Spread 2.(Lotus and/or Excel compatiblity would be nice but it's not essential)

Leon L Robinson
Still running at 8MHz and proud

# 4766. Atari ST and Monitor For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: emr <emr@loop.com>
Message-ID: <3325007B.3344@loop.com>
Source record: 126171
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

I have a 1040STf and an SC1224 color monitor for sale.
The ST is is in great shape electronically and cosmetically.
It comes with the mouse and power cable, but that's about it (maybe a game or two).
The monitor works fine as well, but every now and then it suffers horizontal squeeze (not extreme). It fixes itself, or goes away with a tiny tap.
I'd like to sell the 2 together for $80 + shipping (probably a total of about $110). Local pick up would be best (pasadena, CA) and might consider some interesting trades (midi gear, a Jag system, etc)

Thanks!
Rhett Brown
emr@loop.com

Message-ID: <01bc2ceb$7ba6d8c0$ccf882c1@snapper.dial.pipex.com>
Source record: 126189

I think I remember now....

You wrote the Budgie UK Jetpac didn't you Damien?

I am impressed with that, sorry I didn't remember in
my first reply... it's great anyhow.

Did you know I did an ST emulator for the Amiga 1200
and included your Jetpac on that?

Along with the following...

Chris Skellern games: Jusse, Starburst & a pacman (type)
Kathy Steinbach's Escapade (you should meet her one day!)
Delta Forces MATCH_IT
An old Galaxian type (Vellum Internecinum. Or something?)

They all ran very well indeed, even though only a 14MHZ CPU!

But I'd no need to do a 68000 emulator.

And I ran them all with no TOS at all! I just wrote versions of
the most common 50 or so traps used in games!

So, no OS needed... the best games don't do they?

Also I had a YM sounchip emulator, in which you could
manually alter the waves, instead of always using square waves...

-----

Did someone post on this group a message, asking for the
cuddly demos (main menu) etc to work on emulation?

Well, the main menu (& a couple of interia demos) would
-NEVER- work, -unless cheating...

The same goes for my ST OVERSCAN INVADERS & SIDELONG.

Not a hope mate, these all relied on 'bugs' in the hardware.

Goth of the Shapeshifters (long time since I wrote that).

Gary.

## 4769. Atari monitor cable????

# 4773. Users Group Meeting: Madison, WI

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: dkendall@facstaff.wisc.edu
Message-ID: <5g005l$1lhm@news.doit.wisc.edu>
Source record: 126194

Friends,

The Madison Area Atari Users Group (MAAUG) will hold its monthly meeting on Tuesday, March 11, 1997 from 6:30 to 8:45 pm at the Madison Public Library, Central Branch, corner of Fairchild & Mifflin Sts. Look for MAAUG in the Madison Room on the 2nd floor. Note that the start time of the meeting is one half-hour earlier than our regular schedule. Some members feel we need more time to share our Atari enthusiasm, so we'll give it a try! We hope to be doing graphics demos on a TT030, if all goes well.

Come join members from across southern Wisconsin with diverse interests in MIDI, desktop publishing, graphics, internet applications and games who are helping keep Atari alive in the Badger state.

Doug Kendall
Madison, WI

John Perez wrote this to All about Increase Falcon SCSI Speed?:
JP> I have heard that there may be a way to increase the speed of
JP> the Falcon SCSI port by replacing an IC. Does anyone know
JP> anything about this? I believe it is the same SCSI controller
JP> that is in the TT, and the speed patch originated for the that
JP> system.

I have no idea of an existing speed patch, but since the bus in the Falcon is asynchronous, I believe it should be possible to put a SCSI-chip with a higher clock rating and simply supply a faster clock to the clock input pin on the chip.
I've seen the same SCSI-chip with twice the clock rating of the Falcon's original on an accellerator board for Amiga 1200, so it should be possible to get one. If I stumble on a distributer that can supply me with the chip, I'll try making such a modification myself - just to see what happens...

Best regards,

Claes

: the right moment. I guess this wasn't a good idea, but only this helped.

This happened to me a few times. The first time, I attempted to take the connector out of the hard drive. That took awhile, and nearly crashed the drive. Bad idea. Drove me nuts.

Next time, I turned off the hard drive and computer, turned on the computer, turned on the hard drives, and ran the program that allows me to get back into the drives. All this with the ICD Utilities. Finally, delete the offending file, or move it, and reboot normally.

: Can somebody tell me how to avoid such situations and how to overcome them,
: when they are already reallity? I have TOS 1.02 and a MEGAFILE 20, the
: floppy works OK.

There's not much of a way to really avoid it, but there's a keypress, I believe, that allows you to bypass the loading of the AUTO folder, I believe. I've never used it, so I forget what it was.

Are you running on a SCSI system? I am, and have heard from Frederic that others with SCSI systems have problems running it. When I run it, anytime the mouse is moved, it crashes out to DOS. When a key is pressed, it does a hard lockup.

My system setup is a 486DX4-100 on a VLB motherboard, 12 megs, a Reveal 400 meg tape backup, Soundblaster, and two hard drives (a gig and a 400 meg) controlled by an Adaptec 1542C.

Looks like it, though I just got it, in hope that it will help me run Pacifist. Read my previous message to see what sort of problems I'm having. Now, where to find it...

I went out to http://www.filez.com, and did a keyword search on vbe2. It will get you a number of hits, on something like cvbe20, and that sort of thing. All you need, or so it seems, is vbe20.zip.

If you have an ST, and you have a working floppy drive, you have the hardware necessary for making your own images.

> Second of all we
>are talking about the "ST" platform! Which doesn't exist anymore. No
>support, barely any new software etc.

You're dead wrong on that score - failure to find new software or support can be caused by failing to look. I have a small list of resources at my Web page.

> I can't even find a dealer near me that will fix my drive!

Email info@compdirect.com if you want repairs. Actually, if it's the usual 30 megs or smaller drive, it's probably cheaper to get a Mac-compatible drive and the ICD Link II or Norbert's Link96 - in a nice 500+ megs size.

>I think getting the permission to
>post all those great old ST games is a great idea!!

So do I - but the key word there is "permission." Which you haven't even mentioned until this post, if memory serves.

Try to be the best of whatever you are, even if what you are is no good.

Bahhh BS.
I saw Gemulator classic with Tos 2.06 , calamus on a pece (486/66mhz)
well It just stinks. I would say about the speed of a 5 mhz stf.
So unless you have a p200, that might be ok. But hey running calamus
on TOS 1.6 (in your case) without color support. Kinda sad, ain't it?

# 4783. Live midi performance s/w needed for Atari

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: julian@connexus.apana.org.au
Message-ID: <5g0h88$j14@preeda.internex.net.au>
Source record: 126204
Cross-posted to: alt.binaries.sounds.midi,comp.sys.atari.st

Is there any midifile player that will allow loading up about 10 midis
to be used as backing tracks for an Atari ST for live performance work?

There needs to be very little time inbetween songs in order to keep the
people on the floor.

Any info appreciated,

Thanks,

Julian

# 4785. FS/T: Atari ST software [03/10/97]

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <5g0hgf$4lo@dfw-ixnews5.ix.netcom.com>
Source record: 126206

If you are looking for something that isn't listed, please don't
ask (because if I had it, I'd list it). Also, please be sure to
read the entire message carefully before you ask me any questions.
This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at
http://www.io.com/~vga2000/

This list was last updated on 03/10/97
---
I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game
and $1.25 for each additional game, unless otherwise listed. If
you order enough items I can weigh the order as a package, which
might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full
postal mailing address in your reply, along with a list of the
item(s) that you are interested in. This information is for
internal VGA use ONLY, and will NOT be sold! Also, you will
only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be
considered (especially if the trade offer overwhelms me). I
collect for over 50 different systems, so please feel free
to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping
costs. Shipping cost depends on both the weight of the order
and the distance that the order must travel, unless a set
amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't
serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

> TOS format, I can no longer access it. MagiC reports 'invalid drive -46'

This is strange because the result of partitioning a drive is
independant of the operating system you run when partitioning.

> BTW, when I boot my Falcon says SCSI ID 0.0 is ZIP drive and 5.0 is
> Falcon030. Is this correct?

I would expect it the other way, i.e. the ZIP having ID 5.
Usually if initiator identification/bus arbitration is active (on your
system it is, otherwise the Falcon had no SCSI ID of its own) the
computer gets the highest ID, i.e. 7.

You can't do anything wrong when formatting a drive. The result is
always the same, regardless of the computer platform you're running or
the software you use for formatting. SCSI drives do formatting totally
on their own if they get the appropriate SCSI command. Formatting itself
cannot be influenced by software.

It is. Some graphics cards come with a proggy to support VBE 2, otherwise you need something like UNIVBE (now known as Display Doctor), which comes free with some commercial games or is available as shareware. Do a search for SciTech Display Doctor and you'll find it, or search for sdd53.exe.

Below is a listing of computer stuff I have for sale. All prices are negotiable.
The prices shown are in Canadian dollars which are worth less than the U.S. dollar by
about 25%. This means that the prices shown would be about 25% less for someone
paying in U.S. dollars. I am in Canada (surprise, surprise) and I can ship COD in Canada.
All Shipping is extra. For foreign buyers I can take Mastercard and again, the shipping
is extra unless your order is over $250.00 Cdn, then I will pay the shipping for a
ground parcel. Money Orders are also acceptable.

You may email your order or questions to reg@awnet.com

or you may call me at 204-488-7183

Has it been tested on the Afterburner040?

Will that be a demo version which will be available?
So how do we join the mailinlist?

Right, just tried v0.35 on a machine with an Adaptec AH-1540CP/1542CP SCSI
adapter, and it worked fine, no problems at all.

What DOS mouse driver are you using? The one here is MS version 10.00; at home I
forget, but I think it's either MS version 8 or a no-name one that came with the
mouse.

One thing I did notice was that Win 3.1 wouldn't load after PacifiST had been
run... no bad thing :)

VBE2.0 is a standard way of programming video cards and is much faster than the standard VBE1.1. My videocard is fairly typical in that it has VBE1.1 onboard. However you can run a small program which emulates VBE2.0.

The most popular version is UniVBE (by scisoft or something like that). You can download a trial version from their homepage (can't look it up ATM as our network is *slow* during the day).

If you have an S3 card, you can try a freeware one at:
http://wwwmath.uni-muenster.de/math/u/mesched/s3vbe20.html

PS: Don't think that these programs slow your system down, UniVBE5.x (which actually provides VBE2.0) took up 8K of memory and tripled my Duke Nukem 3D framerate!

Is there a UK distributor for this program? I was playing with a demo of it last night and I had so much fun! It's actually capable of some quite pretty results.

Now if only they'd add an option to import and export other file formats, virtual screen, graphic card support... :-)

Absolutely - 4Mb is comfortable so far, but if I could take it higher I would certainly buy more. There was a guy on this group who has a 10Mb board in his Mega STE but it required a lot of soldering and track cutting :-/

Perhaps all the people who would like a Mega STE memory expansion should mail aixit and let them know. It could maybe also be beneficial to people who use ordinary STEs.

## 4800. Yikes!!Something strange in partition 'E'!!Help!!

Newsgroup: comp.sys.atari.st
Date: 1997-03-10 00:00:00 UTC
From: wl712@freenet.Victoria.BC.CA
Message-ID: <E6twoF.549@freenet.victoria.bc.ca>
Source record: 126221

Something strange is happening in partition E of my HD.It all
started when I decided to make some room by clearing out some
unused programs that were downloaded of the net.I was trying
them out one at a time and deleting them if I felt that I
wouldn't be using them.I was trying out a nice terminal program
called TAZ.I liked it but I'm using stalker now and it does the
job for me just fine.I deleted Taz and everything seemed to go
smoothly until I noticed that the Taz 'folder' was still there
after I had already deleted it.I picked it up with my mouse again
to delete it and after my HD buzzed around for a bit an alert
message appeared saying that it couldn't access that folder.
I tried the 'open file' and 'show info' in the pull down menu
of the desktop and that didn't work either. Will I have to reformat
the whole HD? Is there a program out there that will just reformat a
partition?Is there anything else I can do?
My HD is an older FM with 60 megs run by a 1040ste/4 megs.
Has anyone experienced this before?Any ideas or cures will be
greatly appreciated. Thank you

If you're talking about .MID files (MIDI files) there's a player called
"smf_play" which seems to do the job.
I haven't actually tried it with my MIDI setup yet though, but it looks
fine.

>programs from the net. YES I have tried to find a 720k floppy drive but
>they are few and far between.

Yes, you can use a standard 'PC type' 1.44Mbyte disk drive with your ST!
That is, you'll only be able to use it in DD mode (720K) unless you do some
serious modifications (especially if the drive has no jumpers like most of
todays disk drives). But I guess that's not a problem for you since you
asked for 720K replacement drives...

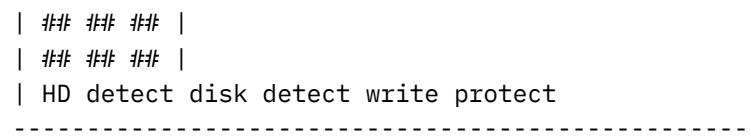
I've successfully been able to adapt 2 different disk drives with my STe-
both of them different versions of the Sony MPF-520-1. It seems to handle
the Atari styled front-panel and "eject button" with a minor modification
to the drive, in case you don't want to expand the eject button hole in
your computer's casing. I guess you can figure that part out for yourself.

Back to making the drive work...
This is what you need to do once you've gotten hold of a new drive:

-There is at least one jumper on the drive; it selects drive 0 or 1. This
is usually set for PC standards as "master" (drive A), but is opposite on
the ST, so you need to set this jumper to the other position.

-The wide 34 pin data-connector from the Atari ST circuit board to the disk
drive has to be fitted "upside-down" (i.e. you have to cut off the "lug"
which prevents this from happening). HD disk drives have their connectors
opposite of what the Atari DD drives do.

-Short the "disk detect" switch. Looking at the drive from the bottom (the
disk drive's circuit board) you'll see 3 micro-switches:



Front of disk drive

As you see it's the second switch from the right. Connect the two points of
this switch together. This is *very important*- if you don't do this you'll

risk messing up your disks!
...Because... the computer won't detect a disk change unless you do this (the PC detects a disk change differently) and will think you're using the same disk when in fact you've inserted a new disk. So when it tries to access that disk it gets all confused because there are other files there.

Well, that's all there's to it. The power connector inserts into the plug on the drive just like before. Good luck!

Hate to tell you that it was JTS Technoligies that bought stock in Atari not Atari from them. Man lighten up about all this copyright crap anyway. As I remember Rich owns a ST so he has every right to have an image copy of the tos roms. There is enought problems going on it this small Atari community without bitching and flameing each other. Try to get along, if you can't pick up all your marbles and go home!

# 4810. Re: Atari Lot's 'O Stuff For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-11 00:00:00 UTC
From: Daniel Fangmann <dfang5@ibm.net>
Message-ID: <01bc2de2$4c190c20$42fd2581@default>
Source record: 126032

Following for sale:

MEGA STE/4MEG(removable SIMMS), TOS 2.06, 52MEG internal Quantum, Golden Image cordless trackball, Atari Mouse,
asking SOLD AlberTT VGA card, SOLD.

SLM804 Atari Laser, recently changed drum, works great with AtariWorks!, asking $150.(comes with an extra new toner cartridge-Atari LPS005)
SC1224 Atari Color Monitors, refurbished $55(original box); used $45(good condition).

PCM124 Atari PC Monitor, new, 9pin connector, original box, asking $50.

SM124 Atari Monochrome Monitor-used, works great...$50(original box incl.)

*** SCSI TOWER: 85meg Seagate HD, Sony CDU-541 CD DRIVE, ICD 155MB tape drive(5 extra tapes), 540 meg FUJITSU(new) HD, 50meg Seagate HD(new),50meg
SeagateHD, 6 SCSI devices in all, wired together in one new case with powersupply/fan with single output to LINK 2 SCSI Adapter, included with cable: recently constructed by Alex YU at ATY Computers, asking $550
Tower will boot automatically to any ST/STE without internal hard drive.
Full instructions to install to MEGA /ST/STE/TT with internal hard drive.

ICD driver software, tape backup software and ExtenDOS pro included!

1040 STF's, 1 meg, good used condition, tested, $65.

Jaguar Game System with CD Player, 2 controllers, Raiden, Highlander CD, Braindead 13 CD, Tempest 2000 Soundtrack CD, Blue Lightening CD, MYST Demo
CD, Vid Grid CD, like new, asking $150.

Aerochopper R/C Aircraft/Helicopter Flight Simulator. Includes actual Futaba 'Conquest' 4 channel controller that plugs into the cartridge slot on an Atari ST. Software, manual and original box
included. New Condition. Excellent program for a 1 meg Atari. asking $125.

Star NX1001- 9 pin dot matrix printer, like new, original box/owners manual, tractor feed or 'auto-load' single sheet. Print on both sides of paper! asking-$50.
Olivetti Ink Jet Printer-PR2300, includes 20+ new ink jet cartridges & AXIOM Printer Buffer 32K, asking $75. Like New!

Star SG-10 Printer with extra black and color ribbons, excellent condition, asking $40.

USA and Canada ONLY!! Dan F.
Shipped from New York.

No thanks! Not yet, anyway! I *STILL* haven't gotten STiK to work with my
ISP. We're both totally confused by this! I'm almost at the point where I
don't think it's even worth my time any more. So why would I want to pay
for something I can't use? If it worked, I would have no problem with
sending a generous amount (or as much as I could afford with my punny
college-student budget) to the authors or buying it, but if the commercial
version is as hard to get to work as the previous versions, it's not worth
my money, time, and frustration. Unless they've made some MAJOR
improvements, I really don't think it's even close to where it should be
to be deemed commercial software! It needs PPP and CSLIP, an easy to use
installation and configuration program, and a totally integrated web
browser, FTP, mail, news, and telnet to be worth paying for, IMHO. That
and the ability to be usable with my ISP!!! Ok, so maybe I'm just
frustrated and getting somewhat bitter. I really think that the software
itself looks pretty impressive, I just can't get the STiK to transfer any
data to the programs, rendering everything pretty much useless. So to me,
it's not worth paying full price for. It's kinda sad, too, because unless
they put free fully usable demos on FTP sites, I'll never get to try any
PPP or CSLIP compatible versions to see if that does anything. Oh well. I
guess I could try to plead with Netscape again to get them to make an
Atari port. Might be easier! ;)

But with Rezfool and NVDI, you can boot up in a genuine ST Medium. And with Blowup, you can get 640 x 480 TC interlaced. Its not good enough for many ST games, but is good enough for most purposes, incl. demo's.

-- I wouldn't call myself a HD expert only that I base my purchases on
research and first hand experience. Every person I know with a syquest
drive has had a failed disk and lost valuable data including myself. =

All of these cases involved disks that were very well treated. No
excess heat or dropping of these disk occured. Every Jaz and Zip owner
I know including myself has had no problem. I am not worried about the
speed difference in the Syquest and the Iomega because I use it only to
transfer files. No external disk is fast enough to worry about speed
differences anyway. The only time I worry about the speed of a disk is
when I need to ouput broadcast video. Even then you have an array of AV
disks striped to handle the bandwidth. I didn't have one isolated
problem with Syquest devices and make a blanket statement that they all
suck. I speak from my experience and the experiences shared by my
friends in the field.

HDDRIVER recognizes ZIP drives regardless whether there is a disk in
them or not. (I don't have such a drive but several users have told me
so. And because a ZIP is nothing else than a simple removable media
drive it works like any other drive of this kind.)

> You have activated Bus-Arbitration?

This is not necessary for the ZIP.

As far as I know this won't work. The DMA hardware sets the transfer speed limit, not the SCSI chip.

BTW, when talking about the Falcon transfer speeds differ considerably with different hard disk drivers. This especially applies for small sizes of the tranferred data block. I found HDDRIVER to be 50% faster than some other drivers in this case. The same applies for ST ACSI if the FAST ACSI option is enabled in HDDRIVER. You might want to check this.

# 4824. Missing Crystal ?

Newsgroup: comp.sys.atari.st
Date: 1997-03-11 00:00:00 UTC
From: bales@garonne.stortek.NOSPAM.com
Message-ID: <E6vDxH.61E@gazette.stortek.com>
Source record: 126046

Taking a look at an old issue of ST Format that described the inside parts of the ST, I noticed a few things in comparison with my 2 actual STs:

-STFM was always supposed to stand for ST (integrated)F(loppy)M(odulator). As a matter of fact all STFMs don't have the RF Modulator. French models (like mine) don't have it because thay were sold with a SCART/Peritel cable that plugged directly into the monitor port. The modulator part of the board is completely unpopulated. The 'M' is still on the label underneath the machine though. I guess it just stand for the generation it belongs too.

-My STE doesn't have this either, but what bugs me a little bit more is a zone

to the left of the GLUE/MMU/Blitter chip (I think), which is also unpopulated.

This part was labeled on the ST Format maps as being the 'System 32Mhz Crystal

which is necessary for keeping the ST in sync with itself'. I suppose thay were wrong on this because my STE works perfectly well without the stuff. So the question is, what is this part that is missing on my STE's board ?

There was such a product, a complete Midi player for live work, using just
an ST (no screen needed).You could load up as much midi files as memory
would allow, & selection was via the numeric keypad.

I forget the company's full name, I think it was "Hands on <something>"

They were in the UK.

They used to advertise in the UK music magazines.

> Regards, Derryck

Definite OOPS on my part! Forgot to mention again that Pagestream 2.2b
or latest version would use postscript type 1 fonts and output a
postscript file! One thing to remember is do all your setup in draft
mode (located in the same dialog box as set greeking) and only check the
final layout just before printing either to paper or disk with draft
mode turned off! Otherwise screen redraws were deadly slow even on my
16Mhz STe with anything other than the Pagestream fonts or default
Compugraphic fonts! In draft mode the PS font look like crap, but the
spacing is right, so setup isn't affected and a final check for
appearance, with draft off, is only necessary for your peace of mind! In
draft mode it's fast enough, even with PS fonts, that I didn't bother
with a text editor or word processor to enter the text, just typed it
straight in by hand! Heck of a program,especially at the price it's
going for now.

If you are extremely lucky, you will have the same revision mother board
as my first STf! It didn't have jumper as such, but did have solder pads
that could be changed enabling the rear most 2 sockets to be used for
the 2 chip version!

>chips ? How would I do that?

Tos 1.62 is for STe, try 1.4 instead. You can install either 2 or 6-chip TOS into your ST, you'll just have to solder a thing or two to do (I suppose there are 3 (?) solder points marked 256 and 1mb, which you will have to chance).

In which area is MagiC faster? If I use GEM-Bench wich isn't the best
program to judge this, MagiC is actually slower than both TOS and
MiNT+AES 4.1 or N.AES on my Afterburner040. Diskaccess for floppy is
realy slooooww under MagiC. On a regular Falcon the difference between
MagiC and TOS is so small that you doesn't realy notice it.

MagiC is nice, but it's not such a speed freak that some people claim
it is.

BTW. Linux works more stable than MagiC on the Falcon, so?

I thought Atari had made a "bridge" load to JTS until the merger
was approved and finalized, then at that time the investment would
be turned into shares. Thats what I got out of the deal. Anyway you
look at it, it was money from the Atari Corp going into JTS.

Mike

> Anyway here's how to make it work.........

<snip>

I really dont know what you are talking about.

To get gemulator-96-demo working on my machine, all I did was:

copy gem96dem.exe to c:\atari\gem96dem.exe
copy TOS 2.06 image to c:\magic_pc.os
run c:\atari\gem96dem

Thats it!

On startup a config dialogue comes up and asks you a few questions (like
which screen-mode you want as default) - when it asks about where your
TOS image is say 'auto detect' and it will find the magic_pc.os file.

At any time when you have the Win95 mouse cursor with Gemulator topped
if you press the mouse button you get the about box which has a menu
letting you access all of the config options.

Simple, eh? and it can access all my drives without me having to set up
any virtual drives (this includes my 8x CD).

I have to say that Pacifist seems more compatible for games than Gemulator,
but isn't (yet) as user-friendly. (personally I think the mon stuff will
be useful for me as a programmer)

I dont agree - Draco made a lot of valid points about Magic, which when
brought up here tend to be ignored, or are often off-loaded onto others
(eg. the 'blame the app' responses).

Magic has the potential to be good (and is in some peoples opinions), but
if ASH/2B/whoever are not prepared to listen to their (potential?) customers
then it is bound to cause them to become annoyed at being ignored.

My opinions of Magic are biased - I was even tempted to put up my own
list of pet hates about Magic for a while...

True, but you don't actually have to do a version of the compiler,
all you need is an implementation of the Java virtual machine, which
is pretty much like implementing any other emulator (and there are
loads of them around already). I've looked at it and although it's not
a quick task, it's also not a really difficult one either (and no, I'm
not going to do it, I've got my hands full already).

Craig.

From: thechyld@pcc-uky.campus.mci.net
Message-ID: <858074278_OASIS_@pcc-uky.campus.mci.net>
Source record: 126062

Just a question here... There is a line under the newsgroups section (the 1st one) that says:

nntp groups (fill in a group here)

My question is how do you fit more than a couple of newsgroups onto this line? I tried just going to the next line with more groups and it gave me an error. I tired just putting nntp groups by itself and it told me that all groups were enabled? I also tried putting multiple lines like:

nntp groups (various groups and then-
nntp groups and so on until I had all
nntp groups my newsgroups listed....)

Set like the above it only reads the last line's groups... Any help would be appreciated! :)

I think there has been a mis-statement here. STik is not going
commercial, CAB is. CAB is a Browser. STik is the TCP stack
interface that provide connectivity to the ISP (or not in Mike's
case).

But there are various STiK clients that provide the services Mike is
asking for. Although they are separate clients, so that you (the
user) can select which of the mail, FTP, news, or telenet clients that
you like the best.

I happen to like NEWSie!

VBE is a standard which was introduced with some graphics cards which
allow programming them all in the same way, and access to the more
sophisticated features of gfx card. VBE 2.0 is just a later revision
of this standard.

Most graphics cards nowadays implement vbe 1.x, but you will probably
need a software vbe2 driver to use this feature.

Yea, my favourite is univbe from SciTech (http://www.scitechsoft.com/)
although the docs to Pacifist mention there being a problem with this at
the moment...

(note that a lot of things get better if you have a good VBE driver installed
- eg Quake lets you access more resolutions)

What about using one of the ports to the Amiga? There are one or two
different ports currently. One is the GNU version I think and there is
also another one as well.

Why do the Amigoids get two and we have none? I hate that.

If there is GNU code out there, it seems like it should be possible to compile a MiNT version of the console, at least -- with some fiddling, of course. But then, I am ignorant about such things, so assumptions come easily.

I use Kobold in 'execute job' mode and back up to a Zip drive. My hard drive is partioned to 5 partions and I have set up Kobold such that I can execute a complete back up of all partitions or each/any individual partion separately.

Source record: 126073

John M Rojewski (rojewski@primenet.com) wrote:
:
: I think there has been a mis-statement here. STik is not going
: commercial, CAB is. CAB is a Browser. STik is the TCP stack
: interface that provide connectivity to the ISP (or not in Mike's
: case).

The interesting thing in this case though is that CAB, the commerical program, while a terrific program and worth good money, is basically worthless without STiK. Yes, you can browse files off-line, including CD-Roms and such, but that isn't what people want it for. They want it to browse the web. So in a very real sense, CAB is only worth as much as STiK is.

So as I said, this is very interesting. How do you market a piece of commercial software that is dependent on a piece of Freeware software to function, especially when many people are have very real problems with the Freeware.

Oregon Research Associates have promised to release Termite TCP by the end of this month. This will be a commercial TCP stack that will support PPP and should be easier tos et up. They have also promised to make sure it will interface with CAB. So Termite TCP would replace STiK in this case. Of course, these promises were made before CAB went commercial, so I don't know what is going on in the minds of these software distributors now.

And then there is always WebSpace, which comes with its own TCP stack. It is promised to support PPP and the screenshots from it make it look like it is well though out and easy to set up. But then again, I haven't heard anything in the two weeks since it was supposed to be released. Where is it?

This is the real problem with Termite TCP and the WebSite TCP stack. They don't exist yet, and we can't test CAB with them to be sure it will work with them, and work easily. So how can ASH market CAB? It would be nice if they worked on the STiK code as part of their marketing of CAB. But then, I am obviously a dreamer.

OK I sent the original question... and I don't really think
that I got an answer here... :( It doesn't seem to be a -
"Yes you can make a postscript output from papyrus using GDOS (NVDI)"
from what I have read here... =( (Or did I miss something out?! :)

Do you have any other suggestions on having the 60+ pages document
(still papyrus) output, in any way, in postscript format (rather
a file actually)? Lots of text, a few line and box graphic and
several biiig tables. The output size isn't a problem...

Have a nice day!

PPP does not offer anything more than slip[1]; if you've got a working slip connection, don't bother with PPP, at least not until there's a PPP supporting STiK. The reason people are adding PPP support to STiK is purely so people who don't have access to slip accounts can still use it.

Mintnet supports PPP; it's not totally trivial to configure but is definitely the most flexible tcp/ip stack on the atari. It does require Mint, so is no use to MagiC users.

There's also at least one other PPP stack around.

Mark.

[1] Well, that's not quite true: it supports other protocols such as IPX, which would be useful for connecting to an office network but is of no interest whatever for an internet connection. Also it can simplify call setup---no more login scripts---which makes it easier to use, but you sound like you've got things working anyway so this won't help you much.

# 4864. Re: Opus 2.2 can I still register

It isn't I'm afraid. I did register it a long time ago, but when I tried to get in touch with the author a couple of years after that I didn't get any response.

The latest version is 2.3; it's more or less identical to 2.2 apart from the lotus-123 import/export, and is only for registered users.

I saw an excel-like spreadsheet for the arc which was apparently by a Doug Harrison. I don't know whether this is the same guy. That was about five years ago I guess.

> If it isn't could anyone point me to another spread sheet that is GEM but
> not LDW Power or Texel.

Well, there's sheet; not my favourite program by a long way though.

> It must be able to produce graphs as good as Opus in GEM
> Metafile format.

I have never seen another spreadsheet that gives graphs as good as Opus does, on any platform. It's way ahead of excel (or excel 5 anyway, I haven't used later versions)

But if you had a motif licence, I'm sure the people who did the port to
linux/i386 would be happy to send you their code so you could compile a
linux/m68k version (you would probably also require a sun source licence,
but that wouldn't be a major problem).

The official sun JVM is not freeware; although binaries are available free,
source is only available under a more restrictive licence. It's crap anyway.

There is a free compiler called guavac, and a free JVM called kaffe is
available for several platforms and could probably be ported to the atari,
or at least to mint, without that much effort.

By a long way the hardest bit is the library. The java library is huge, and
growing rapidly. And since the main reason for it's existence is to insulate
java programs from the OS differences, it obviously can't simply be ported
even were there a free implementation to port (there may soon be a free
implementation for unix, but there isn't one now).

Well, I use a Falcon for HD Recording/MIDI exclusively. It works great,
there are no MIDI timing errors like there are on Mac/PC. Now, the
screen isn't as pretty (you don't get color, really, if you want
performance) and I don't really do much else with the Atari, but for
Music, it's perfect for me.

OF COURSE not. Well, I work for Intuit, so I'm a little biased..
actually, if you're still using the dos version, I would just buy a 286,
you can get one unbelievably cheap now.

: Bye.
: Gentcho

It is possible to bypass the auto programs holding the alt key at
booting time, but be sure of press it after the first flash of the busy
light in the HD. If do it before, you will end with a basic default
desktop.
You can boot from floppy disk if the HD drivers are on its root
directory. The particular files depends on what HD driver are you using,
but for AHDI is the ahdi.prg and for ICD is icdboot.sys IIRC.

Regards.

# 4870. Help! MegaFile HD not saving!

Newsgroup: comp.sys.atari.st
Date: 1997-03-11 00:00:00 UTC
From: AJ Wells <ajwells@ix.netcom.com>
Message-ID: <3325C295.2913@ix.netcom.com>
Source record: 126092

I bought a 30mb megafile for my ST and have been using it only to run Cubase... well the past few sessions I have been trying to find the tracks I recorded the previous session and they have VANISHED! I realized that the segment I was saving them to must have filled up, but why didnt I get an error message? I saved some new tracks to a different section, and it seemed to work ok... are my other tracks gone or have they been saved somewhere else?

Any help would be appreciated

Andrew

>
>any one remembers the www address?

Hmmmm.... I'm not sure, but these two ring a bell:

http://www.ief.u-psud.fr/~lecoat/ -Le Coat's software -Eureka'
http://members.aol.com/fbayle/idx_gb.htm
-Frederic Bayle's software: 'D2M', 'D-Form', 'Piccolo', 'Diapo'

Or perhaps it's something compleely different... Well, I guess it's worth a
try.

>Kev

Hi Kev,

Well, I'm not a HD "expert" either. I do appreciate your reasoned response.
My experiences are just different than yours. I don't use my Atari's or
HD's for commercial purposes. I even have a couple of ST157N (Nancy's)
that still work fine, though they have to be reformatted periodically.

I do run a lot of programs from the EZ Drive so I do appreciate their read/
write speed. None of the people I know that use the EZ Drive with their
Atari's have had any problems and others who responded to this post did
either. This may all be moot, as Gary P. did buy a Zip drive. However, he
did have a few set up problems that would not have occured had he had an EZ.

For the hobbist I would still recommend the EZ if you can find one. For ease
of use, price, setup, and general computing. Your problems using them for file
storage do bother me. To lose all the data and be unrecoverable is NOT GOOD.
I'm not sure what type of computer you had the EZ connected to or what rate
your getting on data transfers, but I don't think(?) that should matter.
I can't believe that all the problems would be defective carts. I'm a bit
surprised SyQuest didn't offer you some help or answers on this.

One result of Syquest dropping of the EZ is that Iomega raised their price
of the Zip to $192 US from $125 US.

And so it goes,

Charles

If it IS a reachable goal to get a JAVA virtual machine on the Atari, it should be done as quickly as possible!!!
JAVA is for the moment just a method of enlivening web pages, but it will be used for full applications more and more. There is a good chance that (platform-independant) JAVA applications will become the standard. If the Atari has a JAVA virtual machine by then, it has survived the IBM terror and is saved from extinction!!!

Maurits.

Can a PC based ZIP drive be used via the parallel port
on an Atari ST-E ? I've an old 40mB Power Computing Drive
which I could give away if I could copy all my files across
to a portable device, and thus use the ZIP drive with both
my PC and ST-E.

Anyone written drivers for parallel port access ?

Chris

It's really difficult to beleive that anyone over the age of 8 would be ignorant of the copyright status of ANY operating system. After all, every school child in the USA (almost) has been exposed to the "shrink-wrap" agreements on Micro$lop products. There is NO logical reason to assume that other OSes aren't copyrighted unless they specifically say they AREN'T copyrighted, like Linux does.

And, in the US, ignorance is still no excuse (although it does seem to be a qualification to hold public office).

Try to be the best of whatever you are, even if what you are is no good.

add my 2 cents

I read many good answers to prevent your problem posted here to the news
group, I have one more. Obtain a boot manager. This will give you the
opportunity to disable the offending program or ACC upon startup.

You should be able to find a selection of boot managers on any Atari FTP site.

# 4883. Re: Using TOS image file on a real ST

Newsgroup: comp.sys.atari.st
Date: 1997-03-11 00:00:00 UTC
From: Steve Cohen <steve@wizztronics.com>
Message-ID: <01bc2e7f$2fb5d020$3f91ffcc@default>
Source record: 126105
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Some revisions of Atari STFM mother boards had solder pads to use a two chip version of the OS, although 1.62 was designed for the enhanced features of the STe computer. The solder pads found on the STfm were for the 2 or 6 chip versions of TOS 1.2,1.4. In this case the jumper pads were named 256/1 meg and were for addressing the larger ROMs 1 meg for the two ROM set and 256 for the 6 ROM set. If you want the enhanced features of a later TOS in an older Atari, use a product such as Compatibility Plus 2. It will allow the use of TOS 2.06 in all Atari 520 through Mega 4's. Please note some soldering is required.

>expense - and if set up correctly, practically does your taxes for you.)

Wayne,

As luck would have it, I picked up a used version of Phasar (4.1) along with ST Accounts when I got Calamus. I've not had a chance to work with either of the two numbers progs, other than to install them on my hard drive and back 'em up. Neither one has the front end that Quicken does - which I find easy and enjoyable to work with. Quicken (DOS version) is a very well-done program. But it may turn out that Phasar and/or ST Accounts will do what I want.

Is Phasar 4.1 the last version - and is there any support for it? Not likely, as it's an Antic prog. :( Know anything about ST Accounts? Any tips for using these progs? Thanks for your feedback!

John

Hello everyone,

I have version 5.12 of HD Driver. Is there a version update of this driver program? I have sent in my registration card, but haven't seen any response to it.

Any help would be greatly appreciated.

Gary

# 4890. Re: Atari ST as a music platform

Newsgroup: comp.sys.atari.st
Date: 1997-03-11 00:00:00 UTC
From: Shepton Mallet <Jonathan.Anderson@durham.ac.uk>
Message-ID: <5g4h2s$e59@mercury.dur.ac.uk>
Source record: 126112
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth

What has John S. Gray (ag352@chebucto.ns.ca) been taking? I mean, look:
: Somewhere in thisthread some posting implies that Notator SL will run on
: a Falcon. As far as I know it only runs on stock 68000's with TOS 2.06 or
: under. Even has problems (not insurmountable) with 16 mHz and certain
: cache utilities.

: Anybody know anything different?

I ran Notator SL 3.15 on a 1040STe. Worked fine. Never crashed, as far as
I can remember, and worked fine. I am not quite sure what your problem
is, to be honest. I never had any!
Do you have version 3.2?

Jon

It's actually NOS that you are playing with the 2 programs are different
and by different people. Just put any group in this line, it's not used
unless nntp.dat does not exist and Oasis will make one for you.

which version of NEWsie are you using? I was having a similar
problem with version 0.66 - John Rojewski told me to try the latest
version, and the problem disappeared!

Try getting the new version - it's at
http://www.primenet.com/~rojewski/newsie72.zip - and see what happens.

I certainly wouldn't know what I'd do without NEWsie! :)

>Anyone have any solutions?

I've had much similar problems trying to get Oasis 2 to work on my machine, with the same bombing problem. I found too much trouble to set up for me. I've heard the earlier version that used NOS was much more stable (1.35) but also found problems configuring it.

My solution was to use NEWsie with the STiK TCP/IP layer. Works great.

FYI someone has copyrighted (or was it patented) loads of numbers - something to do with factorizing large primes IIRC!

Stop trying to come up with this garbage to "protect" your morals. Personally I just find it highly amusing to see the lengths people will go to try and defend it. Personally I prefer the idea of free software (who doesn't) and would prefer to support free software rather than rip off another company (Linux vs Windoze for instance).

I don't like seeing MS stuff pirated, but I do wish MS would die a miserable death by everyone switch over to Linux. NB: I don't want to start a Linux thread here BTW :-)

There is a big difference between a alive platform like the PC,
and a dead one like the ST. I just got an ST from the thrift store
for 15$, and its been fun, but like, man, It cant touch the support
of a PC with a 10 foot pole!

My Amiga is so-so, they have at least 4 times what atari has in
Public Domain... (more than that actually).. But the atari is
much cooler looking.

# 4899. Pacifist mouse problems under DOS

Newsgroup: comp.sys.atari.st

Hello,

I'm having problems running Pacifist under DOS with regards to mouse support. Every time I move the mouse the emulator crashes out (in all versions up to 0.35). I've tried three different mouse drivers without any joy.

I can run Pacifist fine in a Windows 95 DOS-Box but the sound quality isn't too good!

If anybody knows anything of this problem then I'd be very pleased to hear from them.

Thanks in advance,

Jonathan

You surely mean Dan Ackerman? :)

>If he has no time to develop STIK in future to a semi-professional
>software, he should give all informations about STIK to another guy,
>who is willing to do this job.

The problem was not really lack of time.. although that played a
part.. but Also publishing the Cab.ovl and Antmail takes time as well.

>Many user, like me, are willing to pay for a semi-professional working
>STIK again.

STiK still works.. Just not for people who cant get a normal SLIP
account. It still Dumbfounds me why ISP's dont support SLIP
connections.....

>PLEASE DAVE, GIVE ANOTHER GUY A CHANCE, GIVE STIK A CHANCE.

Whatever you may think STiK is still being worked on.. More by a group
of people and not one person anymore.

>PUBLISH AN UPGRADE OF STIK OR LET THIS JOB DO ANOTHER GUY, WHO HAS
>TIME TO DO IT.

Hopefully a new upgrade will be released soon.

Nick.

Maybe even easier than that :)
Dont remember how old this info is..

Nick.

KAFFE v0.8.1 - A JIT and interpreting virtual machine to run Java(tm)* code
==========================================================================

*** NEWS !!! ***

*** "Just-in-time" support for the *M68K* architecture ***

Kaffe is a virtual machine design to execute Java bytecode.
This machine can be configured in two modes. In one mode it operates as
a pure bytecode interpreter (not unlike Javasoft's machine); in the second
mode if performs "just-in-time" code conversion from the abstract code to
the host machine's native code. This will ultimately allow execution of
Java code at the same speed as standard compiled code but while maintaining
the advantages and flexibility of code independence.

New Features
------------

This version of Kaffe has the following new features:

* "Just-in-time" support for M68K on U/AX.

* New code analyser - will form the basis of code verifier.

* Various bug fixes related to better graphics support.

* Lots of bug fixes (see Changelog)

Platforms
---------

Kaffe will run on the following platforms ('J' indicates 'just-in-time'
support, 'I' indicates 'interpreter' support):

| uProc | Mode | Systems |
|---|---|---|
| i386 | J+I | FreeBSD 2.x Unixware NetBSD 1.x<br>Solaris 2.x BSDI 2.x Linux 1.2.13 & 2.x<br>SCO 3.2v5 NeXTStep 3.x Windows '95<br>DG/UX OpenBSD 2.x OpenStep 4.x |
| Sparc | J+I | SunOS 4.x Solaris 2.x NetBSD 1.x<br>NeXTStep 3.x Linux Fujitsu UXP/DS |
| Alpha | J+I | Linux OSF/1 |
| M68K | J+I | AmigaOS NeXTStep 3.x NetBSD 1.x<br>SunOS 4.x |
| PowerPC | I | MkLinux MachTen 4.0.3 AIX |
| MIPS | I | IRIX 5 & 6 NetBSD 1.x |

I encourage people to make ports to other platforms and to feed them back
to me. I would recommend that initial ports concentrate on the interpreter.
These can then be used as the basis for developing JIT versions for these
systems.

The source for Kaffe can be found at the following location:

Europe:
ftp://ftp.sarc.city.ac.uk/pub/kaffe/kaffe-0.8.1.tgz
ftp://ftp.doc.ic.ac.uk/packages/kaffe/kaffe-0.8.1.tgz
ftp://ftp.lysator.liu.se/pub/languages/java/kaffe/kaffe-0.8.1.tgz
ftp://sunsite.mff.cuni.cz/Languages/Java/kaffe/kaffe-0.8.1.tgz
ftp://sunsite.auc.dk/pub/languages/java/kaffe/kaffe-0.8.1.tgz
ftp://alterego.stack.urc.tue.nl/pub/kaffe/kaffe-0.8.1.tgz
USA:
ftp://ftp.cs.columbia.edu/pub/kaffe/kaffe-0.8.1.tgz
ftp://sunsite.unc.edu/pub/languages/java/kaffe/kaffe-0.8.1.tgz
ftp://ftp.redhat.com/pub/mirrors/kaffe/kaffe-0.8.1.tgz
Japan:
ftp://ftp.webcity.co.jp/pub/andoh/java/kaffe/kaffe-0.8.1.tgz
Others:
ftp://ftp.unicamp.br/pub/languages/java/kaffe/kaffe-0.8.1.tgz

What you need
-------------

For a Kaffe system you need the following parts:

kaffe-0.8.1.tgz Virtual machine and all bits
provided by tjwassoc.demon.co.uk
kaffe-0.8.1-package-javasoft.com.tgz Sun's class libraries.

These two are are the minimum to get something useful working (you might
already have the classes libraries from JDK 1.0.2; if so don't bother to
get them again).

If you want to use graphics you'll need one of the following:

kaffe-0.8.1-package-biss-net.com.tgz AWT graphics support.
kaffe-0.8.1-package-epfl.ch.tgz Alternative graphics support.

Uncompress and untar these archives into the same directory, configure,
make and install.

Enjoy.

Personally I say bin it and use the old Oasis, v1.35. It uses the trusy
but DOS like NOS for the online stuff and it works very well IMHO. Try
your trusty ftp sites or if you can't find it then it should be at my
site http://www.pwomar.demon.co.uk/oasis135.tos

On my UK machine you need to hold the Control key instead of Alt, I
believe that this may only work on machines with TOS 2.06 or higher too.

>then, I am obviously a dreamer.
>

No, you're not. I read the latest newsletter from ASH. You can also
read it on the Web-pages of ASH.

They are writing there that they are working on a software that will
substitute STIK and will support CAB. But they gave this information
very carefully, because they have just begun the work.
They also wrote, that this programm will only work together with
MagiC.
ASH has for sale also an HTML-Editor software, that works together
with CAB. This software is already available and called Texel 1.6. It
can be started from CAB and you can directly see the result of your
new HTML-Page created in Texel with CAB.

ASH is a very serious software house. You will see, I'm sure they will
have in a few weeks:

? = The Internet Connect Software
CAB = The Browser (already available)
Texel= The HTML-Editor (already available)

Have a look at: http://members.aol.com/ashinfo

Mike,

I'm looking to do just that (make TOS images for my own use). I have machines with versions 1.04, 1.06, and 2.06 and would like to be able to use them on different machines (all STs... Stacy, 1040 STE, and MegaSTE).

I assume that the procedure is well defined for using an image to run an emulator, but I've seen nothing about running a TOS image on _an_ST_. I've made a dump of each version and tried to load each into a different machine using QuickTOS, but each one bombs (even when trying to load into it's 'native' machine). Is there a program like QuickTOS that will allow loading of a TOS image into an ST??

I've been told about an older program that will load TOS images, but I haven't been able to find it (I was told that it was on the older ICD utils disks).

Any good news for me??

# 4911. Re: Poll: What kind of hd backup do you use?

Newsgroup: comp.sys.atari.st
Date: 1997-03-12 00:00:00 UTC
From: claes.holmerup@p5.dada.ct.se
Message-ID: <ftn_2.200.136.5$fidonet.org_b9b3e23c_Claes.Holmerup@p5.dada.ct.se>
Source record: 125941

Mike Hopkins wrote this to All about Poll: What kind of hd backup do you use?:

MH> I'm don't have any way of backing up my hard drive except for
MH> floppies.

Backup?!?
*TOUGH GUYS DON'T MAKE BACKUPS - THEY REDO THE JOB INSTEAD...* ;)

Backup to floppy is slow and eats up LOTS of disks :(

MH> I've heard good things about Diamond Back 3.

I regularly use Diamond Back and it works very fine.
MH> What kind of hardware? Tape backup?

Diamond Back is said to be able to work with most SCSI tapestreamers, but I've only tested a few - which really HAVE worked fine. The best ones are, of course, DAT streamers. They're very fast compaired to other streamers, like QIC-80 and others.
I don't have a streamer myself, so I've only made rather limited testing.

MH> Zip?

I use it all the time. It's really great. When using a Zip for backup (and if you choose not to split files), you can use all files directly from the Zip disks (which is impossible with a tape) and copy them without having to run the backup program. Naturally, you can also make backups without a backup program if you copy files in some sort of an intelligent way...

MH> Sequest removable?

Haven't tried, but Syquest have always made good things.

Other options for backing up:
Another HD of the same size. That's actually an alternative, since the price of HD's is going down all the time.
CD-writer. Since CD-writers and CDR's are becoming cheaper, it's a realistic option to use CDR as backup media too (need SoundPool's CDRecorder software).
If you have a Falcon with an S/Pdif interface and a regular DAT-recorder with digital in/out, you can also use the DAT as backup streamer if you use DataDat from SoundPool or another program from BlowUp (can't remember the name now).

MH> For that matter, what is the best hard drive handler? I have
MH> heard of HDDriver. Who makes it and how new is it?

I use HDDriver 6.0, which has been written by Uwe Seimet (it's possible he'll answer you question as well). HDDriver is being updated continuosly and that's why it's the best driver around. When a problem is discovered, or Uwe finds a

way to make things better, he just fixes it...

On 7 Mar 1997 22:48:41 , Mike Weber and Chris Tabacco wrote:
>
>You guys are getting a little out of hand... First of all I own an Atari
>ST. The hard drive is bad so I need to get the images.

I may be missing something, but what does a bad hard drive have to do
with TOS images? Your current TOS _should_ be in ROM format.

>Second of all we are talking about the "ST" platform! Which doesn't
>exist anymore. No support, barely any new software etc. I can't even
>find a dealer near me that will fix my drive!

Which platform we are talking about is irrelevant. The fact is that
TOS is a protected product. Lack of support and software are not
reasons to condone or participate in piracy.

>Thirdly, do you really think JTS cares anymore? They have 1000's of
>unsold Jagars stuffed in a warehouse which they can't get rid of!!

Whether or not JTS _cares_ is also irrelevant. The fact is that they
own TOS and may do with it as they please (even if it pleases them to
do nothing with it... sad but true). They may have thousands of Jags
sitting in warehouses, but you can bet that if you broke in and took
one (just to play the two or three games you own, mind you), they'd
prosecute.

>And trying to get people kicked off internet access providers is
>ridiculas! Enough of these stupid accusations.

There is no accusation involved. Solicitation of software in this
manner is illegal. As such, it could be grounds for negating a
contractual agreement between an ISP and a customer.

>JTS has better things to do with their time going after pirates of
>an absolute ST platform. Take a good look at the 8bit platform!
>There is all kinds of software out there on the net and no one gives
>a s*it. And it's keeping the platform alive. If you want to keep
>interest in the ST platform I suggest you do the same. I think
>getting the permission to post all those great old ST games is a
>great idea!! I miss or have forgotten all those great games I played
>countless hours playing on the ST! Make them public or at least make
>an ST action /adventure pack for the IBM and sell it to the public! I
>myself was a true hardcore Atari ST fan but times change. Then again
>that is my opinion! So stop flaming me! BTW thanks for all the
>replies from all you generous people out there...

The release of those games would be a GREAT idea. As long as it is understood that the option to do so remains squarely in the hands of the owners of the copyrights, not someone who figures that no one will care and that since there's so little available for the ST that we are "entitled" to it. To put it in perspective, running a red light is illegal... even if there's no cop around and there's no other traffic. This is not a flame, simply an opinion different from yours.

See ya,

> nntp groups and so on until I had all
> nntp groups my newsgroups listed....)
>
> Set like the above it only reads the last line's groups... Any help would
> be appreciated! :)

It's a NOS question, not Oasis like the title said. The answer is that
you can set many groups (separated by comas) on *one* "nntp groups" line.
I think you can make this line as long as 488 characters long, but only if
you can find a text editor writing so long lines... (if you find tell me
which one!) Everest goes up to 300 characters per line, most editors stop
at 254, 255 or 256 characters. I don't know any best text editors for
this... a binary editor like GemHexEd or XXedit could be used.

So you can perhaps use jokers to shorten your newsgroups list, like
for example "nntp groups comp.sys.atari*" to have the 6 groups of the
hierarchy. If you don't want to read all the hierarchy, you can exclude
some groups prepending them with "!", like perhaps in "nntp groups
comp.sys.atari*,!comp.sys.atari.advocacy,!comp.sys.atari.8bit" or even
"nntp groups comp.sys.atari*,!*.advocacy,!*.8bit". But in this last case
be carefull, you won't receive any advocacy group, even if somewhere in
the line you include comp.sys.be.advocacy... The exclusion is active for
one whole nntp protocol NEWNEWS command.

Once that said, the "nntp groups" list is used only if your nntp.dat
file (in spool/news/) is unreadable, corrupted or deleted... It's far
better to set there your groups: no lenght limit (if more than 488 chars
NOS makes a second NEWNEWS request), jokers and excludes are also usable,
and you can even poll certain groups from one server and other groups from
another server... I use only one low traffic group in "nntp groups" for
security, so if a problem occurs with nntp.dat NOS will request only this
one group from the server, and not the default... "*" is the default...
(do you have 23 years to download *all* messages from *all* 23000
newsgroups at 28800 bps? ;-)

To be complete on the subject, I must say you have also a third way to
enter wanted groups, directly in the newsserver(s) declaration in

startup.nos, something like "nntp addserver news.provider.com 50000 comp.sys.atari.st,alt.fan.bruno-kozlowski,alt.binaries.pictures.me" and in this case, you *can* add groups to the list for the given server with a second command (same server name, same autokick delay).

If I remember correctly, when you "nntp kick news.provider.com" NOS requests groups declared in the given newsserver's section of nntp.dat file, if not present it uses "nntp addserver" group list (for the given server), if empty it uses "nntp groups" list (for any server), and if empty it uses "*" joker... In any case but the first, after the succesfull news session it will create a new nntp.dat file with the name of the newsserver used and the GMT date and time of beginning (minus 2 minutes) of the session, and will use it next time.

Bye! Bruno.

PS: Your 13 lines sig is too long, the Netiquette says 4 lines maximum.

Source record: 125948

This message from ut13@ab293.rz.uni-karlsruhe.de to All came in on a wing and a prayer...

Hi Guentcho!

u> I have installed an accessory program in my auto folder. It didn't work
u> ant the computer rebooted again and again :-(. I didn't know how to
u> stop it.

Depending on the hard disk driver, you can often bypass the hard drive booting by pressing a key, try [Alt], [Ctrl] or perhaps a letter key to boot from that partition or drive.

Then you can install the drive icon for C so that you can disable the prog in question.

u> At the end I did it after a lot of tries to turn off the power of the
u> HD at the right moment. I guess this wasn't a good idea, but only this
u> helped.

You could have tried booting from a floppy with the HD turned off, then turn it on and then load your hard disk driver from floppy, then proceed with installing C as above.

Regards, Derryck

After many happy years of Atari computing I think it is time to move on. I am therefore selling my beloved Atari Falcon 030, with 4 MB ram, and a 127 MB hard drive, and LOADS of software on the hard disk (all legal I might add). I am sure the package, including the software it worth well over GBP1000 new, and I am willing to let it go for 500 pounds or the nearest offer.

I am in Edinburgh, Scotland, and do not have a car, so if you are not in the Edinburgh area we shall have to come to some secure arrangement with regard to transport.

If you are interested reply to this posting or phone me on 0131-2283706

Ian.

I just finished setting up PPPkit14 and GlueSTik - now I have CAB and Newsie working on a PPP connection. It turns out that PPPkit requires very little setup - unzip it on your D: drive to make it as easy as possible. Then you have to edit 3 or 4 text files and create a suitable desktop (best with Newdesk or Thing BTW). GlueSTik is almost ludicrously easy - I can't believe I lived with SLIP all this time...

Both should be available at my ftp site - see below for the URL.

Oh, and definitely go for Newsie 0.70 from John Rojewski - it now includes ftp!

Not quite correct. PPP with MiNTnet is faster than SLIP with STiK - because
STiK doesn't support VJ compression, and the PPPkit does. There's a definite
stability factor, as well, at least with my ISP - I used to get disconnected
anywhere from 6 to 30 times (no exaggeration, that's actual count) using STiK
befoer I was able to remain logged on long enough to read my mail; now
disconnections are VERY rare (I've had 1 so far).

Toddle down to your local PC store and get any 1.44mb floppy drive; you can't use the high density option, but otherwise it will be fine. Make sure you tell the guys there that you wnat it jumpered for DS0, or buy a double-male 34-pin header and a PC "twisted" floppy cable at the same time.

Then swing by the hobby store and get an Xacto razor saw so you can open up the front of the Mega's case a little bit. You also need four 1/4-inch high spacers to raise the drive up a little bit, if you want the disk slot to line up with the old one, but you can skip that if a 1/4-inch gap above the top of the drive doesn't bother you.

No. This question pops up about once a fortnight and the answer will likely remain "no" until Bill Gates switches to Mac System 7.

Get a SCSI port Zip drive and a suitable host adapter such as the Link96. You will probably have to add a "stolen +5v" supply to the host adapter - a flying lead from the joystick port, or a modification of the Zip's SCSI port will be in order, if you use any of the "Link" adapters.

Hi Richard...

I think I might have emailed you before, but if you're interested in my Atari Mega 4, it's still available.

It also has something called ADAP Soundrack, if you're interested in that.

Would you need a monitor, or just the CPU and keyboard?

Dean.

PS: I'm in Hawaii. Shipping is probably a bit higher than in the Mainland, but not much more if done by Priority USPS (pretty fast, I just sent something to someone in Florida and it got there in a few days).

<snip, snip>

Oh dear! I have my own problems, but you'll see that I have Oasis2
working properly, if you look at the highly-tech lines of this msg.

Please do try installing it again: it is well worth it!

Do remember to to install it in a completely new directory from the one
where you first unzipped it. And don't delete the original zip file
until you are well satisfied.

Now then, I have a problem too: just where the whatsit are the emails
received via POP3? They seem to have been automatically deleted before
I got the chance the read them!

Regards,
charles.

From: szhays@bullwinkle.ucdavis.edu
Message-ID: <5g57pc$osc$2@mark.ucdavis.edu>
Source record: 125973

While banging around the ASH pages looking for information about CAB, I stumbled across a bunch of stuff about a product they have called Phoenix.

No, not the 3-D rendering program.

My German isn't very good, but it certainly looked like a powerful relational database with a very slick graphical front end. In fact, it looked a heck of a lot like Microsoft's Access. And it clearly said the program would run under both plain TOS and Magic.

For the last three years, I have honestly believed that the three most glaring holes in the Atari software library were a good Web browser (a hole neatly filled by CAB almost two years ago now), a very simple yet powerful home accountancy program like Quicken (has anyone taken a good look at PHEM, it is at least ahlfway there, I think), and a really powerful database program. Something in an entirely different league than Twist.

Has Phoenix finally filled this third hole?

What other wonderful TOS compatable programs are hidden beneath the inscrutable German on the ASH page? Magic, Kobold, Signum, NVDI, Texel and Artworx I had at least heard of, although there seems to be a lot of useful information on the ASH page if I could read it. Papillon, I'd never heard of... and Phoenix?

g> eventually want to rearrange them. i've tried the move all the files
g> to an empty folder and place them back in the auto folder (in desired
g> order) method, but this doesn't work. (it goes back to my default,

The simple answer to your question is that the directory is displayed in name order, which is to say that the list of progs is shown sorted by name rather than by running order. To see the actual running order you need to be able to display the directory unsorted, see if that is an option for your desktop.

One way to reorder progs in your auto folder is to use Autosort, you just click and drag files around until they are in the order you want.

HTH.

Regards, Derryck

>
>Any help in finding such a driver would be much appreciated.

Hmm, this sounds somewhat similar to a problem I had getting Cab to
print to my Citizen 120D using the FX-80 driver (nvdi 3). After much messing
around with output that overlapped and output which had gaps I did
eventually get it working. This was accomplished by editing the FX
driver.

You'll be distressed to hear I can't remember what I messed with - it
just started working.

I played with a draft driver first to speed the testing up a bit -
though the same settings applied to quality output failed to work and
had to be tweeked again (I had a vague idea of the problem by then
though). iirc, only the "3 pass" mode could be made to work.

[ great help Guy! ... ] ;-(

Answer: don't mess with it!

Leave it untouched and use the Oasis "Add New Group" option. This
writes into two seperate files down in the SPOOL\NEWS folder, called
NNTP.DAT and ACTIVE.DAT - never edit these by hand btw, the format
(including whitespace) is critical and can lead to some freaky
(unwanted) results!

# 4941. Inferno SuperOS 1.0 -- realtime networking OS with only 1MB memory requirement

Newsgroup: comp.sys.atari.st
Date: 1997-03-12 00:00:00 UTC
From: zmail@usa.net
Message-ID: <33265b45.50057879@netnews2.worldnet.att.net>
Source record: 125982
Cross-posted to: comp.sys.amiga.misc,comp.sys.atari.st,comp.sys.amiga.advocacy,comp.sys.mac.advocacy

Lucent Technologies introduces Inferno SuperOS 1.0; real-time network operating system provides powerful platform for multi-purpose multi-system applications development

FOR RELEASE: MONDAY, MARCH 10, 1997

Murray Hill, N.J. -- Lucent Technologies' Inferno Network Software business today announced Inferno SuperOS 1.0 -- a real-time network operating system (OS) that provides a software infrastructure for developers to create distributed network applications.

Inferno 1.0 provides end-to-end connectivity over the public telephone network, the Internet, corporate networks, cable television and satellite broadcast. With Inferno, networking and security protocols are built in the OS, and applications run unchanged across any communications network or device.

The product has a very small memory footprint, allowing it to act as a stand-alone OS on information appliances and run as an application on network elements -- such as servers, routers and switches -- using UNIX or Microsoft NT platforms.

"Inferno is a full-featured operating system for customers developing heavy-weight network applications for all types of information and communication devices," said Mike Skarzynski, vice president and general manager for Inferno Network Software Solutions. "In today's complex mix of networks, customers can use Inferno to capitalize on new business opportunities while leveraging existing hardware and software investments."

OmniBox, a provider and developer of interactive services and programming for the home electronic commerce market, is an Inferno 1.0 customer. Thomas A. Bush, president of OmniBox, said, "Our goal with the OmniBox Network is to help communications distributors in all channels reach many businesses, households, universities and hospitals. We chose to build our services architecture on Inferno because it provides the flexibility, openness and robustness that such a sophisticated electronic commerce system requires."

The Inferno 1.0 operating system includes the Styx communications protocols, the Limbo programming language and the Dis virtual machine." Applications and services developed from other programming languages, such as Java, C and C++, are supported by Inferno 1.0.

The new release of Inferno also includes drivers for speech and audio applications, and open database connectivity (ODBC) for Informix,

Microsoft, Sybase and Oracle databases. Enhanced documentation, training and support include programmer's and user's guides, a Limbo programming course and a support hotline for developers.

Inferno 1.0 runs as a stand-alone operating system on small devices which use Hitachi SH3, DEC StrongArm, Intel Architecture, MIPS, Motorola 68030, Power PC, SPARC and ARM processors. The product also can be hosted as a virtual system on Sun Solaris, Silicon Graphics IRIX, DEC Alpha, HP-UX, and Microsoft NT and Win95.

"There is great synergy between Inferno and other products and services offered through Lucent Technologies," said Gerry Butters, president, North America Region for Lucent Technologies' Network Systems business. "We are committed to using 'Inferno Inside' all the network elements and software solutions we provide."

More than 10,000 developers are currently working with the Inferno network operating system. Customers interested in obtaining an Inferno 1.0 Development Kit (which includes the entire system, sample applications, developer toolkit and documentation) should call 1-888-LUCENT8. Evaluation copies of the product and application demonstrations are available on the World Wide Web at http://www.lucent.com/inferno/.

Lucent Technologies designs, builds and delivers a wide range of public and private networks, communications systems and software, consumer and business telephone systems and microelectronics components. Bell Labs is the research and development arm for the company. Lucent Technologies was formed as a result of AT&T's restructuring and became a fully independent company -- separate from AT&T -- on September 30, 1996.

Different systems may have (different) keypresses which bypass the
boot programs. Failing that there are boot managers which can do the
same thing. There is also a small utility on my web page (see sig)
which also does a similar job, called WATCH iirc. Place it first in
your autofolder (use AUTOSORT or similar for this). If any programs
after it crash and the system reboots then hold down your chosen key.
It then prompts for all the auto folder programs and accessories which
it will rename or leave if you choose. It does nothing else, it being
a cheap 'n' cheerful programming tool I knocked together when writing
those pesky boot programs.

That can't be true, can it? If you have to rewrite every line maybe,
but hopefully will tht not be needed as there is an Amiga port of the
GNU version on its way. I don't know enough about all this, but it
sounds like you should be able to use big portions of the Amiga version.

There is also a cool program called Euler. It's beginning to ge a bit
old now but its like Math Lab on the PC/MAC/Unix. It's supposed to be
_realy_ good. It can also plot 3D pictures which look very nice. I
think the Atari development has been canceled but it's still being
developed for Unix and OS2. Try to find it if you can.

Hi Magnus,

I had MagiC running in fast ram for a while:) Long enough to do a
bencnmark compairson. MagiC was <slighly> faster than TOS in fast
ram (according to Gembench) in some areas. I posted these results
a while ago and started a fued over which was faster. As MagiC is
not stable at all from fast ram, and TOS runs fine there, I didn't
do any real world measurements. It just crashed to many times.
With TOS loaded in fast ram and MagiC in ST Ram, TOS is much faster.

My Falcon Diagnostic Cart arrived today. It is about 1" longer than
a Cubase dongle. It works really slick on my stock Falcon, but wouldn't
come up on my Mighty Sonic Falcon. Probably won't do much good on
the A/B either. In a few minutes you can perform a test on most all
of the system. It is an EPROM cart, not something you can make up
yourself without a lot of work. I tried it on my dead Falcon using

another bird as the terminal, but never could get a response. From the manual, it looks like it's time to get an o'scope:).

Mike

From memory all they do is make an existing bootsector executable (i.e. you have
to put the code on yourself) or they put on some sort of standard bootsector
(e.g. a virus protector).

Oops! Sorry about that. I didn't know that the power connector was
different on different drives. Perhaps this goes mostly for external drives
as my internal drive has the exact same power-pinouts as the replacement
drives do.

Yes, that's right!

But CAB never was a problem. The big problem was and is all the time
STIK.

The biggest point is, that it doesn't support CSLIP or PPP. I think
Dave Ackermann, the author of STIK, has a great responsibility.
If he has no time to develop STIK in future to a semi-professional
software, he should give all informations about STIK to another guy,
who is willing to do this job.

Many user, like me, are willing to pay for a semi-professional working
STIK again.

PLEASE DAVE, GIVE ANOTHER GUY A CHANCE, GIVE STIK A CHANCE.

PUBLISH AN UPGRADE OF STIK OR LET THIS JOB DO ANOTHER GUY, WHO HAS
TIME TO DO IT.

So far

Before I start, a little disclaimer (You're never too prudent these days regarding this subject): I am not promoting software piracy. Just discussing the issues subjectively (objectivity is an illusion) but logically. No need to complain to my postmaster.

I always beleived that copyright is one thing, free distribution is another. It might not be the case in other countries, but where I live (in France) there is a distinction between the author's rights, and the mode of distribution of the author's work. This means that I can very well copyright a program and have it distributed as freeware. I still have rights on the software (I can state that it must carry my name or a text file, that it cannot be modified, conditions of use or distribution, etc...).

I'm not sure this distinction exists also in anglo-saxon law, but I have seen programs that carry a copyright line, and are freely distributed. Xcontrol.acc from Atari Corp. is an example that comes to mind. MS Internet Explorer and lots of other free software on the PC is also like that.

So, just because a program has a copyright notice doesn't mean that it isn't freely distributable. It just tells you who owns the rights. You are talking about two different things. Only the owner of the rights can tell how he/she

wishes the program to be distributed.

In the light of this, piracy is to distribute software in a way that opposes the author's wish. Whether you are making profit on a program that the author wished to be freeware, or you are giving away for free a commercial program, both are piracy.

The problem here is that the owner of the rights, JTS, has not specified clearly how they want TOS to be distributed, and they are not distributing it themselves. In this case we have to suspect that they don't want it distributed at all. Which means they specifically want TOS to die.

Now the question is, how are Atari users supposed to react ?

Nicholas Bales, Toulouse, France

You sure can. Just use any DOS formatted disk, and make sure it is double
density (unless your ST has a high density drive).
Avoid using Windows 95 to store files on the disk, as it messes up the
filenames when they are read on the ST.

Not possible I am afraid. Apparently the parallel port on the ST is
not fully compatible(not bidirectional?)
The only option I know of is for the Syquest SyJet (and maybe the
EZ135 or EZ230?) and that is a parallel port to SCSI cable, which you
can use on the pece. You can plug the SCSI SyJet into your SCSI
chain on your Atari, or plug it into the IBM parallel port via this cable.
Workd for me :^)

Source record: 126001

Hi...

Today I received yet another complaint from someone who has tried to purchase (or update) the Ultimate Virus Killer through UK distributor, Douglas Communications. Douglas Comms seem to cash cheques but not deliver anything, or not send all the updates ordered in a 'subscription'.
With some regret in my heart - Douglas Communications was one of the most important factors in the success of the program - I have to advise you not to get your copy straight from Douglas Communications any more.
Customers of Douglas Communications can get the current version (7.0) and the next update (7.1, to be expected at the end of the summer holidays) by sending me 10 pound sterling in cash (or via a cheque made out to J.P. Karsmakers - mind those initials!).
Further questions (and compliants)? Please contact me.

>
> Someone correct me if I'm wrong here.

It would be more correct to say that ANY TOS in EPROM will not plug
directly into old STF/STM/STFM's. The Eproms do not have the same pinouts
as the Atari ROM's.

However, you certainly can modify STF/STM/STFM's to use TOS 2.06 (not sure
if you can use 1.62). The details are in a file (on umich certianly) & the
cost is very low.

JG> 10 midis to be used as backing tracks for an Atari ST for live
JG> performance work?
JG> There needs to be very little time inbetween songs in order to
JG> keep the people on the floor.

I'm not sure, but I think that SoundPool's "Freestyle" may be what you're looking for. I haven't tested it myself, but from what I understand it can load standard midifiles and then switch between different songs by a Program Change midi message (from a footswitch or a synth). It's also an arrangement program -somewhat like Band-in-a-box, so I'm sure it can come in handy sometimes...
Ask SoundPool a little more about it and you'll get the info you need:

Rather pointless if you ask me.

> There is MAGROM from Uwe Seimet which protects the MagiC binary code in the RAM

The only problem is that it doesn't work on a 040 and that it just
protects MagiC it self.

True, just the virtual machine, and the interface to the class
libraries, and, and, and. I got the source from Sun MicroSystems and
have looked at it. It is mostly standard ANSI C, but the whole GUI
interface must be written, and the hooks into the TCP stack (i.e.
STiK), and that all must be tested on a number of machine types,
(ST,STe,Mega,TT,MSTe,Falcon,etc).

So its not just a little 'knock off' task.

By "segment" do you mean partition? If so, then what HD driver software are
you using? One version of AHDI (Atari's) will overwrite the next partition
when one gets full... I'm not familiar with Cubase-maybe some of the other
Atari faithful can shed some light on the matter. Good luck! :)

Yes, and as there is NO English distributor of many of the above mentioned programs, there is NO information available about them in English.

I remember now hearing something about Phoenix a long time ago, but it didn't sound very impressive as it sounded like merely a multimedia database (a stack of whatever, say pictures, sounds, or text). The German page makes it clear it is a relational database (rare as hens teeth on the TOS platform), has screen shots of the user interface (very slick), and tons of information I can't understand. Does it have a scripting language? If so, how much is it capable of? Is it SQL compatable? It sounds like the version for Windows may have more features than the version for TOS, does the TOS verison NOT import DBase files? And on and on.

>
>Anyone have any solutions?

If you use ppp throw away Oasis 2.10. It's of no use. I do know lots
of people (including myself) who tried to use it with ppp. It seems
there are some major problems with the ppp-protocol.

Now the error -33 message. The directory where you've put Oasis and
the rest must be called OASIS2 otherwise you'll get these error
messages.

I've tried to use Oasis 2.10 on a TT with a TTM195 screen and NVDI4.
Oh boy what a mess. The caracters seems to be displayed in 20 points
(or more) although the font is set to 12 points.
Furthermore lots of bombs.
So my advice is: Dump the rubbish called Oasis 2.1 and use Oasis
1.35e. instead. It's not bugfree but at least it works.

greetings from a very disappointed registrated Oasis 2 u?er

I think HD Driver is up to version 6.2
I have 5.13, and the update is coming. (I thought it was 6.0, by the time
I get it it may be 6.2!)

# 4979. TOS ROMs & copyright in general

Newsgroup: comp.sys.atari.st
Date: 1997-03-12 00:00:00 UTC
From: SNAPPER <snapper@dial.pipex.com>
Message-ID: <01bc2eec$5d080ee0$LocalHost@snapper.dial.pipex.com>
Source record: 126020

A few thoughts on copyright paradox...

Is it possible for me to copyright the number 5 ?

100 ?

1000000000102030405494 82 ?

I think not, but any computer file is really just a
large number, each consecutive byte of a program
for instance will form a big number.

In the case of a TOS ROM this big number would
be over 190k long!

So, I can copyright big numbers but not small numbers ?

What if I made an equation, which produced the big number
for TOS 1.02 ?

I might even have a program, based upon this great equation
of mine, so if I entered a 1 at the prompt, my great equation
program would generate TOS 1.00 from it.

But, if I entered a 2100 at the prompt, the (GE) prog would
generate a copy of TOMB RAIDER for me,
2101 -TOMB RAIDER 2 --even before it's released, etc etc..

Would this great program of mine be breaking any copyright?

You'd never have to buy another piece of software again...
Also, there'd no longer be a need to write any!

And, what if I wrote a great PC game, which sold really well
then found that if I put the program file on an Atari ST, it ran
and was TOS 1.62 ?

i.e My great PC game program was accidentally the same
big number as TOS 1.62...

And if I tried it on the Amiga, it ran as something hitherto not
thought possible, e.g... A program which in itself was a sort
of entity, with it's own consciousness ?

Why, it could end up taking over the world !!!

And in so doing it might make a more sensible copyright law...

All most unlikely, I know, but all the above is all *theoretically*
possible.

And if I had 1000 monkeys with 1000 typewriters and waited
1000 years....

I'd find them all dead, having written a load of gibberish!

Gary Wheaton. 12.3.1997

I would however argue that one of the main reasons and the original use for actually having an executable bootsector is so that TOS could be loaded but it's all about how you look at it, let's just agree that disks can have an executable bottsector which the ST looks for and can be used to load TOS from disk and leave it at that.

>>Hi.. so can we get hold of your ST emu for the Amiga...??

Well, I reckon so James, you should be able to get it from:

Pathfinder PD
41 MARION STREET,
BINGLEY,
WEST YORKS,
U.K.
BD16 4NQ.

But, this ST emulator was an experiment I was doing, to see
if anyone registered or was otherwise interested. Since I got
no replies- I quickly dropped it having released only one set

of games.

It's not the sort of emulator where you just load what you want
either... You get 7 ST games on a menu disk. That's it.

During the first stage of developing my ST emulator for Amiga
I decided to release a batch of ST games on a disk, to see if
anyone was interested, when no-one was, I dropped the idea.

Devpac sources are available from me only. And they only work
on more powerful Amigas, such as A1200.

And you'd have to be pretty good at coding to use them I think-
anyone who is this good might just write their own...

**********

*
If anyone else is interested in seeing this Amiga disk, with the seven
emulated ST games on then I may consider posting it on some site
somewhere.

The Amiga 1200 disk has seven game files, plus a menu program etc on it.

If anyone is interested in it, and if anyone has ideas as to how to post it
etc
then drop me a line, don't all speak at once...

SNAPPER aka Gary

# 4984. Problems with "Oasis" files

Newsgroup: comp.sys.atari.st
Date: 1997-03-12 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3325fe922baa25@sn.no>
Source record: 126117

I downloaded "Oasis" a few days ago to see if it was something I could use
for Internet email etc. but I've had several problems with it.
Mainly that several programs in the package don't work!
The following gives me error messages ('-33' which according to my TOS
error message list means that a file isn't found), or the program just
bombs when trying to run it;

ice.prg, icenet2.prg, oasised2.prg, low_mem.prg

I seem to have done what the docs tell me, putting the various files where
they belong... has anyone else had these problems?
Oasis.prg works fine- the only problem is when I enter the configuration
part for "font", where the programs bombs. Strange.

I downloaded the latest version of Oasis, which is version 2- from the
Oasis web page:

http://www.yeadontt.demon.co.uk/

Anyone have any solutions?

>the NODESK.PRG itself.

I guess I'll find the rest of the files in the "nosys100" package then.
I'll have a look for it.
No, I don't have MagiC- yet, but I will be getting it in a few days.

>If you need the English package, I have it - the one edited by Howard

Thanks, but that would be a lot of trouble for you (and a lot of online
time). I'll spare you the time and money and look for the "nosys100" file
myself first.

I will reply in email, but thought that everyone ought to know about this
(demon users anyway). Newsie used to have a *big* problem with messages
returned by the Demon news server. This has been fixed in later versions,
try 0.70. This is now available (supposedly, I haven't tried it) from,

http://www.primenet.com/~rojewski/

N.B. Newsie still won't work with Demon for Email!!

Regards, Gary

Thomas A. Lamparty (lamparty@concentric.net) wrote:

: If you are extremely lucky, you will have the same revision mother board
: as my first STf! It didn't have jumper as such, but did have solder pads
: that could be changed enabling the rear most 2 sockets to be used for
: the 2 chip version!

We were talking about this in email, before I realized that this was also in the newsgroup. I'll explain for everyone what we were talking about.

If you have revision B of the ST motherboard, you'll have one row of six TOS chips, in front of the power supply, and the memory is under the supply. Next to the far lower two sockets, are A16 and A17, both marked 256K and 1M, with the 256K part soldered. There's mentioned somewhere that you have to remove the solder from the 256K section, making sure it doesn't make contact at the pad (there's an empty area), and solder the 1M one, so you can use the 2-chip TOSes.

Tom, what else can you say about this?

Those of you who want to put 1.62 or 2.06 in the STf, STm, or STfms, don't. TOS 1.0, 1.2, and 1.4 will comfortably go in them. The STE was made to take the 1.6, 1.62, and 2.06 chips.

Someone correct me if I'm wrong here.

# 4989. MegaSTE hard drive is going out

Newsgroup: comp.sys.atari.st
Date: 1997-03-13 00:00:00 UTC
From: jnorton@nilenet.com
Message-ID: <5g92li$ls9@thoth.nilenet.com>
Source record: 125773

The hard drive is starting to continually whine. It is getting pretty loud. I figure only hours or days left at the most. Help! :)

It is a Quantum LP105S partioned into four 25meg drives (C-F). It boots with AHD Driver 6.061 (July 17, 1993 version) as ACSI Device Unit 0.

I am going to back up the drive this evening (will take from 45 to 50 disks - is there was a better way to do this?).

I am a real novice with this, so ..
Is the drive easy to replace? What size drive should I get? Any Quantum 3-1/2"? Just buy something off the shelf at the mega-computer store? Can Atari read a 3.5 gig drive? Or do I need something a little smaller? Will it fit inside the Atari?

After installing the drive in the case, how do I go about formatting or will it already be formatted? How do I go about restoring the boot sector and all the files from the Diamond Back backup? Do I run Diamond Back from floppy and just have it restore everything? Will it restore the boot sector too?

Thanks,
John Norton

Is this a paper or magnetic magazine Richard?

I would be interested to browse it either way.

Anyhow I'm not sure if we are supporting Charles Darwin, or opposing
him?

But I've often thought of trying to write a 'random program generator'-

-programs produced from random numbers (possibly pi), but then

applying some evolutionary survival principal upon them etc.

In order to advance them etc.

The strong survive to further the next generation, while the weak are

kept in archive, in a simialar way to how tyrannosaurus's DNA is

still available today -somewhere (inside an ancient fossil or fly)

or perhaps even us humans?

It's a serious enough project and perhaps the only way toward

creating a great program (or an entity).

I of course do exceot the fact that it sounds -sLiGhTly MaD!

But Richard I certainly would love to see your article, but not

your massive list of random numbers...

Gary.

# 4994. CoSTa version 2 is now available

Newsgroup: comp.sys.atari.st
Date: 1997-03-13 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <47407435_000003_OASIS_NEWS@the-gap.demon.co.uk>

.....this resolved around the amount
of different pictures that can be displayed in monochrome mode on the Atari

ST's 640x400 screen. It would display pictures of just about anything you'd

ever see, including the formula for the cure to AIDS, the address of God
and an
ST user actually *smiling* behind a PC (or an Amiga, for that matter :-)
And this 'number' would only be 32768 bytes long. Still the amount of
different pictures possible on such an ST boggles the mind...

for our (feeble) minds certainly, but the 'mind' of a *really* advanced
computer ?

Also, if one accepts the existence of God. Then is anything impossible
for Him?

Is this *really* advanced computer some form of (or similar to) GOD ?

All these questions, & more -may be- answered next week on...

Why would you want to do that ?

Tos 1.2 Probabl;y load s more stuff (on an stfm)

thna would TOS 1.62.

Having 2 computers, with 2 O.S's means you can load

more stuff, don't it?

Forget your TOS image, for the time and trouble it will
take ( I assume you put a price on your time?) to get
working (being non-relocatable, plus using 256K? of
your free RAM, It's cheaper and more sensible to just
buy new TOS ROM's (or probably a new machine!)

>In the light of this, piracy is to distribute software in a way that opposes
>the author's wish. Whether you are making profit on a program that the author
> wished to be freeware, or you are giving away for free a commercial program,
> both are piracy.

Sure, copyright in itself does not directly imply specific distribution
conditions. It does, however, imply a user licence agreement specified
by the copyright holder. This may be the usual stuff found on commercial
programs, a freeware licence or whatever. It is the breaking of this
agreement that constitutes piracy. You would not be infringing copyright
because you are still giving the credit where it's due - unless you hack
the code in which case you are breaking copyright law also.

>The problem here is that the owner of the rights, JTS, has not specified
>clearly how they want TOS to be distributed, and they are not distributing it
> themselves. In this case we have to suspect that they don't want it
>distributed at all. Which means they specifically want TOS to die.

The question is: what was the licence agreement when TOS was originally
distributed as part of the host computer ? The likelyhood is that the
licence is clearly spelled out somewhere in the manuals, and AFAIK it
still holds.

>Now the question is, how are Atari users supposed to react ?

Atari users would probably not be all that bothered - they already have
their machines. Atari emulator users, on the other hand, will probably

consider the rights and wrongs of the situation and make a conscious choice to break the licence agreement by using pirated TOS images. It may be argued that JTS are perpetuating this situation by no longer distributing TOS but, as the saying goes, two wrongs don't make a right. The ideal solution would be for someone to buy the TOS rights from JTS and allow distribution under a freeware licence - a consortium of all those commercial emulator distributors would probably gain the most. I somehow doubt JTS would play ball however.

>extension?

Frank,

I've got the Wizztronics ram board which takes 1 16 meg 72 pin SIMM if I have the terms right. I've heard about the new Magnum ram board, do you know who makes it and if it's available in the US? BTW, the Wizztronics is a _far_ better bit of design than the 30 pin SIMM expander boards I've seen. The Wizzo board is no bigger than the 4 meg Atari board, whereas the 30 pin SIMM cards eat up all the free space in your Falcon due to sloppy design. How big is the Magnum card?

John

Texel is NOT a HTML-editor !
Texel is a spreadsheet program that can save tables in HTML-format.

Yes, but as you experienced...dealing with Darek isn't worth the effort and I'd rather trust in Frederic getting PacifiST running perfectly over the next few months (heck, I have more faith in my cat writing a perfect ST emulator) than Darek. Darek's claims in the 8-bit emulator front and his lack of success speak for themselves and his attitude towards his customers is pathetic and it's obvious he doesn't really care and thinks this, writing emulators, his customers, and everything else is just a big joke.

Hello,

The following ST software is for sale. All programs include the
manual unless noted. Shipping is extra. No CODs.

$24 NVDI 4.0 Screen Accelerator and Truetype font engine
$24 Magic 4.0 Super fast multitasking OS
$24 STraight Fax 2.5 Full-featured fax program
$24 Devpac 3 Professional assembly programming environment
$19 Pagestream 2.2SE Desktop publishing with Postscript support
$19 ImageCopy 3.5CD Multi-format image capture and manipulation
$19 XBoot 3.10 *THE* boot manager for the Atari
$19 Cover Disks ST Format disks 84-48,44,36,32,30,28-26 &
Atari World #9,8,7,6,5,4,2 (66 disks)

$ 9 Chaos Engine Intense arcade action from the Bitmap Bros
$ 9 Doodlebug Colorful, fun platform game from CORE software
$ 9 Torvak the Warrior Side-scrolling action game from CORE software
$ 9 Wolfchild Action-packed platformer from CORE software

$ 7 Misc Chips YM2149 Sound Chip, WD1772-PH, 8519 (2)

Email if interested.

From: csilver@kendaco.telebyte.com.Spam.Th.is
Message-ID: <5g89em$prg@news.telebyte.com>
Source record: 125874

Hi All,

I know this isn't germane to this NG, but please hear me out. The Spam block I've been using has become ineffective. Spam.Th.is on the end of my post was working fine until recently. The spam block should send auto generated bulk mail to Israel :) But not now ;( I've been getting a load of junk every day.

If someone has a better idea please post or let me know. As I don't give my e-mail out casually nor does my server, I'm curious as to why my posts to this NG generates so much interest to bulk mailers. Atarians are not known as big spenders :)

Tracing down bulk mailers and sending them "Remove" requests does no good. It may only create more junk mail!!!

TIA,

Charles

AFAIK, this information was *not* meant to be made available to people!!!
0.72 is a beta, and AFAIK, the only people that should have this URL are
beta testers!!!!! :(

0.70 is the latest publicly available version of Newsie!

Yep these bulk mailers are getting more sophisticated and will now
be programed to ignore any excess characters after a .com or .co.uk or
whatever address. move your Spam.Th. before the .com in your address.

My guess is the next step will be to look for words like "spam" or
"remove" in email addresses and remove these words as well (YMMV).

regards

I have a question about how to blow the TOS.IMG file into a PROM. How
do I do it? All the files I have seen which are used to make blow
proms are plain ASCII files with a hex value for each adress. The
TOS.IMG files looks to be a binary file. So how do I convert it to a
format that my blower understands and where can I get such program?

Nice. Now is there any way we can set up a disk to have such a bootsector.

I have tried Quicktos and haven't got it to work.

Can Gemram be configured to load a TOS image from disk instead of from ROM ?

The virtual machine is not very complicated, this is true especially for
Atari machines that come with a floating point processor. But don't
forgt that you also have to implement the class loader and the native
parts of the Java runtime libraries. Without AWT Java is useless for
most users.

No, the parallel port lacks several signals.

> Is there driver software for this purpose >?

You can't write a driver because the Atari hardware can't support
parallel port ZIP drives.

PC disks are compatible with ST disks (as long as you format them in
720 Ko,but older ST's disks ARE NOT compatible with PC...
it mean that ST's can access PC disks,but not the opposite

so:
- format a 720 Ko disk on your PC (hide the HD slot on the disk if
necessary)
- transfer on the disk the files
- put the disk back on your ST
- get the files
- That's all!

You need a SCSI host adapter with support of parity for it. My
recommendation is the LINK96 by Norbert Wieczorek (norwiecz@aol.com)
because it's the only one that can drive any SCSI device connected to
the ST/STE.

Hi

I have a TT and had similar problem. Switch the serial 2 port is it is
not taken by a graphics card. This is much more reliable and faster.
Make sure you are using hsmodem 6 or 7. Set the modem CPX to *150*
Parity none bits 8, car 1 flow rts/ctr and set the cpx to mamory
resident. This will also work for the modem port 2.

On our university Linux based servers, each user has a directory called
.WWW into which they can put all their web pages. By default, if no file
is specified, the file index.html will be sent.

> the 1.62 ROM. How can I make the STFM boot with the 1.62 TOS image ? Does the
> ST check on the boot disk in search of a TOS file ? How should I name the file
> so that the ST recognizes it ?

There was a program called TOSLOAD for use with the ICD host adapter. It
loaded a TOS.IMG file on bootup. I can recall using it to load TOS 1.0 on
a TOS 1.4 machine so that I could run games that would only run under
TOS 1.0. I don't know if it would load higher TOS'es (never tried it).

> Another question:
>
> The STFM has a 6 chip version of the TOS 1.2. Can I put the 2 chip 1.62

> chips ? How would I do that?

I think that the highest OS you can put into an ST is TOS 1.4.
TOS 1.62 and subsequent versions (2.x -> 2.6) were for STE's and MegaSTE's.
You can obtain similar results on an ST with TOS 1.4 and NeoDesk, for
example.

You snipped:
'Inferno 1.0 runs as a stand-alone operating system on small devices
which
use Hitachi SH3, DEC StrongArm, Intel Architecture, MIPS, Motorola
68030,
Power PC, SPARC and ARM processors.'

Which suggests it should be possible to run on Amigas. (Unless Amigas
are too large ;)
It sounds like a very special-purpose OS though, not intended for
general use.

>
> Maybe even easier than that :)

[information about kaffe snipped]

I mentioned that elsewhere.

The JVM isn't the problem anyway, it's the libraries. The port of the sun
JDK to linux/i386 would be easiest way to get them.

Source record: 125906
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hehehehe... the Subject header made you read this mail/posting didn't
it? ;)

Not to worry though as CyberSTrider is only closing for a month and this
is
advance warning.

Denesh Bhabuta is getting married on 27 March, 1997. Additionally he is
moving
into his new house around this time. As such, CyberSTrider will be
closed
and on holiday for a month, from 20 March to 20 April this year.

Registrations received up to and including 14 March, 1997 will be tended
to
before the 20th. Any received after that date are unlikley to be tended
to
until after the holiday.

Denesh will also try paying the authors of shareware what they are due
before
the holiday.

Please note that CyberSTrider will have a new address when it returns.
Details
will be posted later.

Best Regards
Denesh Bhabuta of CyberSTrider

Source record: 125909

```
I'm sorry, but this advert only regards norwegians!
---------------------------------------------------

Jeg har to Falcon'er og trenger penger.
Derfor oensker jeg aa selge:

* Atari Falcon030+Speed Resolution Card
* Tos 4.04
* 4Mb Ram
* 40MHz CPU
* 20MHz BUS
* 50MHz DSP
* utvidede grafikk muligheter
* Intern 250Mb 2.5" Hard-Disk m/div software
* Atari SM146 14" Mono Skjerm
* Atari mus
* 290DPI erstatnings mus
* Brush-mouse m/Deluxe Paint ST
* Musmatte
* VGA og RGB adaptre
* Monitor Switch-Box
+ Alt av orginale boeker og tilbehoer

Samlet oensker jeg 4000kr+postens avgifter, men vaer velkommen til a gi
mindre bud uansett! Hva jeg oensker, og hva jeg faar, er to
forskjellige ting;)

Maskinen har vaert en del oppgradert, noe den baerer preg av,
men alt fungerer utmerket og den er ennaa i daglig bruk.
Kabinettet er orginalt og pent brukt.

Har hatt Afterburner040 installert pluss en 50MHz FPU
oppgradering, saa det er meget enkelt aa installere
liknende senere.

Maskinen selges slik den staar.

Hilsen
Geir...

> A few thoughts on copyright paradox...
>
<Stuff snapped off>

Wow, Gary,

This is really, like, far out man! Really intellectual stuff and all that! I once thought of something like that, too, but this resolved around the amount of different pictures that can be displayed in monochrome mode on the Atari ST's 640x400 screen. It would display pictures of just about anything you'd ever see, including the formula for the cure to AIDS, the address of God and an ST user actually *smiling* behind a PC (or an Amiga, for that matter :-)
And this 'number' would only be 32768 bytes long. Still the amount of different pictures possible on such an ST boggles the mind...it's more than the total amount of atoms in the universe. Your TOS 'number' would be 192000 bytes long, and that is just too big to even grasp mentally. I had pretty much of a problem grasping this 32768-byte 'number'.
Just thought I'd add my few cents. I wrote a "1st Word Plus" article on this subject (called ANNIHILATISM or something like that), a "GfA Basic" source file that calculated the total amount of different pics possible on an ST monochrome screen and a file that contains the decimal number in hex bytes (so the file that contains the number is half the length it needs to be, as one hex number can contain two decimal numbers - $66 for 6 and 6, see?). If anyone's interested I can email this in a small ZIP archive to the newsgroup.

>>Carson and the TAF group in Toronto. I could u/l it to you if
>>absolutely necessary but it is a little big! Nonetheless, I'm happy to
>>help out!

I've gotten hold of the "nosys" package as well now, so I copied
"nosystem.prg" over to the AUTO folder, rebooted the machine, ran
"noconfig.prg" and had a look at the parameters there. I barely changed
anything- just the language ofcourse to English.
Then I rebooted the machine again, but I certainly didn't see any new
desktop although upon booting I got the message that the No|system was
initialized (or whatever).... IS this a replacement desktop or is it
something else, and what on earth is the "nodesk" package for? All I could
understand that there was any use for was the "nosys" package.
I'm a little confused..

>It may only create more junk mail!!!

Effectively fighting spam's is becoming an issue - and until it
becomes unbearable for our legislative arms, we probably will get
no relief. (They did finally get relief on fax's but even that
took work - and it took the legislative people's faxes to start
getting jammed with spam to really get action.)

I'd encourage you to write your congressman/woman and request action
on their part.

If we simply try to continue the fight ourself, you can already see
what it leads to - escalation - smarter programs used by the spammers.

What's next? Will consumers always requesting to be removed and
always returning the full mail message (or even more) OR maybe
start replying to every sales message with a "I do not buy" in
the body of the message - and the full message repeated so the
spammers have to sort through garbage in their "sales" stream
mail.

And the escalation will continue.

The only real answer is a legal answer with very high penalties
assessed on the spammers - but on an international network - that
will also have limited effectiveness.

The best answer would be to have multiple nets and not allow commerce to take place over some of those nets. Let the free nets then have free commercial rein. Much like the tv model in the States.

Just my frustrations showing too, I guess. Wayne

Nope, that's a common http site.

An example of a gopher site I can't visite is the gopher site of the
Calafornian Academy of Science. The gopher link (gopher://gopher.calacademy.org:640/7)
can be found on http://www.calacemy.org/research/ichthyology/species/

[...]

As many other people have suggested, you could use Diamond Edge to fix such a problem. It would most likely get rid og the folder for you. If you were unlucky, you might find that in the process Diamond Edge would cause some other data to be lost. Diamond Edge is very good at fixing up disc problems, but not very good at recovering damaged data. For this you generally need a sector editor and a good understanding of the GEMDOS filesystem.

Anyway, in this case you might find that some simple PD utilities would do the job. You could try using a sector editor (e.g. Memfile) to delete the folder (change the first character of the filename to E5 (hex)). There will probably still be space for the directory allocated in the FAT, however. If you are very unlucky, you might find that some other data has been damaged as well. I believe there are some PD utilities that would fix up the FAT for you, although it shouldn't do any harm just leaving it the way it is. All it would mean is that the space used by the folder would never be freed. What is more of a concern is the possibility of other data being damaged. This might not be immediately apparent but could have serious consequences in the future.

So while deleting the folder with a sector editor might work (and probably will _appear_ to work), you would certainly be better off with something like Diamond Edge.

Alternatively, just make a backup of that partition and then zero it using your favourite hard disc utilities. (If you don't have any, then get AHDI 6.06 from an FTP site and use the supplied HDX.)

Sorry to follow-up my own psot, but, in a way, I'm not.

Rich Tietjens asked me to post the following message on his behalf:

----------8<-----------8<------------

MiNTnet turns out to be dead easy to set up - I just did it, and it works perfectly with CAB 1.5 on my Falcon. I would expect it to work well on any 4 meg ST in high rez (or low rez if you need lots of color - I wouldn't bother with medium rez). It is my intention to write a user-friendly GEM-based program that will create the necessary text files for a working PPP setup. Some samples are included with PPPkit14 but you still have to edit them manually; I want to make it easier. Once it has been written, my setup proggy will be released as freeware and posted in alt.binaries.atari also.

Meanwhile, I suggest you get PPPkit14 and GlueSTik from my ftp site; you can get CAB and Newsie there, too. Set them up and you can have PPP access in under an hour - sooner, if you can type faster than I do. <G>

On WinNT which I uses to connect to Internet, there is no problems transfering
files to diskette. Any long filenames are given the shorter DOS 8.3 names with
the insertion of the ~n where n is a number.

# 5062. Classic Computers List

Newsgroup: comp.sys.atari.st
Date: 1997-03-13 00:00:00 UTC
From: bill@booster.bothell.washington.edu
Message-ID: <5g7k31$qtl@nntp1.u.washington.edu>
Source record: 125964

Please excuse the preceding screwed up posts - I'm using
an unfamiliar editor.

Hi all.

I have just started a new discussion list for people who
collect/maintain old computers. If this kind of thing
interests you read on...

CLASSICCMP - The "Classic Computers" Discussion List

NAQ (Never Asked Questions) 0.1

What is it?

This list is for the discussion of Classic Computers -
primarily for those people who collect and restore
old machines. It is brand new - no subscribers yet
so sign up. The collection and restoration of computers
is becoming a big enough hobby that I felt a need for
a place to talk about it.

What is a classic computer?

Well that's hard to say but since I created the list I'll
do it anyway. A classic computer is a machine that has not
been produced for 10 years or more. It's an arbitrary
definition but at least uncomplicated.

What are the guidelines?

The list is designed for discussion of collecting, restoring,
and maintaining old computers. I'm not going to be heavy
handed with restricting discussion. I'd just like it to be
clear that the list is not the proper place for discussion
of technical problems with the standard PCs and Macs (other
than the really old stuff). Anyone can lurk - if you're
going to post, just use your own good judgement.

This IS NOT and will NEVER BE a list for discussion of "which
computer is best?" and anyone who posts the ubiquitous "why
don't you just go buy a PC you moron" will be immediately
unsubbed.

Beyond this - have fun! That what keeps us going with these
old machines.

How do I subscribe?

Subscribing to this list is slightly more challenging than most. Read the instructions below.

1. Send a message to listproc@u.washington.edu with the line

subscribe CLASSICCMP your-address

in the body of the message.

2. Send a message to bill@booster.u.washington.edu introducing yourself and explaining why you wish to be added to the list.

That's it. I require the letter of introduction for several reasons. 1 - Only people who really want to be on the list will bother. 2 - If you can't follow directions I won't hear from you. 3 - It helps me get an idea of who's on the list and what they hope to get out of it. 4 - I like to respond personally to new members rather than run a robot list.

# 5068. Re: Atari ST as a music platform

Newsgroup: comp.sys.atari.st
Date: 1997-03-13 00:00:00 UTC
From: "John S. Gray" <ag352@chebucto.ns.ca>
Message-ID: <Pine.SUN.3.91.970309230330.26451A-100000@chebucto.ns.ca>
Source record: 125970
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth

What? I answwered this thread through comp.sys.atari.st, not reading the .synth one.

Get with it. Not all users of musical software have the financial resources to peel off $1900.00 for a computer and then another $230.00 for some software.

I love my Atari ST. In comparing it to my Aunt's Mac Plus, and my late mother's XT clone that was upgraded to a 286 with no desktop enhancements, it is great. The two mentioned elderly ladies looked upon my St as a wonderful, powerful and fast platform for lots of productivity.

Others who run a Mac PowerPC 7500 or an NT 4.0 workstation enjoy making fun of me both in person, at meetings and on-line in groups like this.

You weren't answering my question though, so just for the record I'll toss the ball out there again, this time spelled out for the geekiness-impaired:

Has anyone ever found any way, a hack or whatever, to run C-LAB/EMAGIC Notator SL (3.15 or whatever) on any:

>PAK30 modified Mega ST or 1040STe;
>AtariTT030;
>Big 040 or 060 machine like a Hades, DirecTT or Medusa;
>Macintosh running MaciC MAC;
>Gemulator-equipped PC....

Or anything else faster or with greater bus width than a Mega STe?

JG

# 5071. ATARI 1040ST HARD DISK

Newsgroup: comp.sys.atari.st
Date: 1997-03-14 00:00:00 UTC
From: Alex Breitburg <alex2@com2com.ru>
Message-ID: <3328A67E.7EF9@com2com.ru>
Source record: 125794

Which hard disk i can connect to ATARI 1040 ST?
Can I use PC hard discs IDE or SCSI ?
How to connect sound card to this computer?
Mail me , please.
Thanx.

# 5072. Re: TT modem 2 bugs

>so I may finally access the higher baudrates in a positive way?

If you're using a TT, the first thing to do is dump the MODEM.CPX - it's just about worthless. Then go to my ftp site and download the FSER096 package - put the .PRG in your AUTO folder and the CPX in the obvious place, and you'll have the proper control you need for the TT's serial ports.

That's not a fair characterization, John. When the RAMgizmo was
designed, 30-pin SIMMs were the primary type in use; 72-pin SIMMs
became popular only relatively recently. And you can't use just ANY
72-pin SIMMs with some of the new RAM boards - they have to be
single-sided design (meaning chips on 1 side only).

Sure, it's nicer to have less space occupied by RAM - but let's not
overlook the convenience of less-expensive SIMMs and the fact that the
only otehr game in town when the 30-pin boards were designed was the
Atari bopard - which cost as much as 64 megs on a PC did at that time.

b2b3@elec.iuta.u-bordeaux.fr wrote:

: PC disks are compatible with ST disks (as long as you format them in
: 720 Ko,but older ST's disks ARE NOT compatible with PC...
: it mean that ST's can access PC disks,but not the opposite

That's if you formatted them with TOS 1.0/1.2. With the advent of TOS 1.4 and up, you can format the disk on the PC and it'll be readable both ways. With the advent of the Falcon, you can format it 1.44 meg, and it'll be readable both ways. One minor bit of interest is that the Falcon format is about 3K bigger than the PC format, and it uses 512 byte sectors, rather than the PC's usual 1024 byte sectors.

: so:
: - format a 720 Ko disk on your PC (hide the HD slot on the disk if
: necessary)
: - transfer on the disk the files
: - put the disk back on your ST
: - get the files
: - That's all!

Slow, too, if you don't mind taking the time moving files around on disks, deleting them as you go. If you don't mind taking less time, you can transfer around 5.5 megs an hour if you got a hard drive on both sides, at 19.2K, via a null modem. Saves me loads of time when I do that, and the biggest plus, is that you have no errors.

The same. Parallel ZIP drives won't work on any Atari. Use the much
faster SCSI version and get a SCSI card for your PC. There is no other
solution.

Yeah, I thought of something like this some years ago too, except mine involved a high-resolution photorealistic display; and it too could generate anything you've seen or will see, including quite embarrassing things. Now imagine if you add animation! Over the finite amount of time such a program would run, it would generate a sequence of you (well, technically we're talking an approximation because it's in the digital domain, but remember this is on a photorealistic display) walking down the street stark naked with a banana in each hand and a toilet brush stuffed in your mouth! Mind boggling, eh!

I once explained this idea to an artist friend, while she was mixing some paint, and it pretty much blew her mind :-) "Don't bother painting whatever you were going to paint, I can use an algorithm to generate it, and everything else you will ever create..."!

Hi there. I have both a PC and an Atari. I like both (although I like my PC a bit more) and am looking for a way to use Atari programs on my PC. Also all my midi stuff is on Atari formatted disk (programs and midi files) Can my PC read these disks or do they need to be converted? If so, what software would I use on my PC to do this?

Well, hope to hear from someone. Now it's off to insert an Atari floppy in my PC to see what happens. =)

Last I understoon Java was designed to be a *PORTABLE* language... you DO
NOT
need to re-write the Java language specification for the AtariST... all you

need to do is create a Java Virtual Machine. Essentialy the Java VM is akin
to an emulated system... you create the VM for the ST and you will be able
to run Java. When the new version of Java comes out simply make the
appropriate
patches to the VM and you've got the new version.

Anyone with the VM source and a good knowledge of the ST should be able to
make
a proper JIT compiler for the Java VM.

Will Fisher

How does using the old GEMDOS make it non-premptive? Unless Magic is unlike mint in an important respect this doesn't make any difference as the OS (ie. GEMDOS) runs in supervisor mode and MiNT will not preempt supervisor mode processes. I guess this is what you mean, but a lot of programs rely on this behaviour so I would be supprised if it was not so in Magic.

Can anyone tell me where I might increase the amount of time that PPPLink's setup of MiNTNet will wait to connect to my server? It dials, the system starts connecting, then it tells me that I have NO CARRIER, all the while the system is finishing up its connection. It is well to note that my server is totally digital, including the phone lines into the server, so I don't actually get the ringing, et al. This is starting to bug me. Any help out there? :)

Leslie

John Norton <jnorton@nilenet.com> wrote:
: The hard drive is starting to continually whine. It is getting pretty
: loud. I figure only hours or days left at the most. Help! :)
: It is a Quantum LP105S partioned into four 25meg drives (C-F). It boots
: with AHD Driver 6.061 (July 17, 1993 version) as ACSI Device Unit 0.
: I am going to back up the drive this evening (will take from 45 to 50
: disks - is there was a better way to do this?).

If you have access to another Atari HD, you could link them up via the DMA
port and simply transfer the data to spare space on the other HD. Make
sure that the other HD has a scsi ID different to your's.

: I am a real novice with this, so ..
: Is the drive easy to replace? What size drive should I get? Any Quantum
: 3-1/2"? Just buy something off the shelf at the mega-computer store?
: Can Atari read a 3.5 gig drive? Or do I need something a little smaller?
: Will it fit inside the Atari?

Yes it's easy to replace. If you have 100 meg now, 540 should be plenty.
Remember that Atari programs are MUCH smaller than PC ones.
Make sure that the drive you buy can disable parity with a jumper or else
you'll have to do it with software and another computer like a Falcon or
similar.

: After installing the drive in the case, how do I go about formatting or
: will it already be formatted? How do I go about restoring the boot sector
: and all the files from the Diamond Back backup? Do I run Diamond Back
: from floppy and just have it restore everything? Will it restore the boot
: sector too?

I use ICD pro to format with but there are many others like AHDI etc.
You can't restore everything boot sector stuff because it would be for a
100 meg drive, not the new one. You have to start from scratch.
Then just copy everything onto the new HD.

Good luck,

Julian

Hi Kelvin

Atari and PC disks format is almost the same. If you use a PC formatted disk to transport your data and programs from your Atari to your PC, you shouldn't have a problem.

There is a remarkable company in Germany, ASH (Application Systems Heidelberg) selling excellent Atari emulations for both Macs and PCs called "MagicMac/MagicPC". Not too dirty written software is likely to run under Magic.

I hope that my statement will help you. This is the first time I read Newsgroup Messages and "even dare to threat somebody with my wisdom".

Bye
Martin

# 5095. Re: What is a SHTML Web Site?

Newsgroup: comp.sys.atari.st
Date: 1997-03-14 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk>
Message-ID: <33295D60.4E7C@sunderland.ac.uk>
Source record: 125818

Hi,

Just thought I'd clear this up...
.shtml is a commonly used extension to indicate to web servers that can handle server side includes (SSI) that the requested web page contains SSI commands and should therefore be parsed by the web server. SSI allows web page authors to create dynamic or more easily managed content by using commands embedded in their web pages that are executed by the server as it send out the pages. If you read the source to a .shtml page you will not necessarily see the commands as they may have been replaced by the server with the output of the command itself. Common applications may be to include the current date and time or to include a signature at the bottom of every web page. Because SSI involves the web server checking every .shtml page it sends out it puts an extra burden on the server and is therefore not always implemented by web masters.

Michael

>visite theire homepage. Always get a blanco page.
>
>
Well it seems that you have mint/mintnet, then install LYNX if you
didn't do it already.
With Lynx you'll be able to load all the pages you want.
And since you are ready to install lynx, just install GOPHER as well:)
And/or IRC II 2.8.2 :)
Get the full set of tool now that you have mint..
Lynx is very nice, coz very fast and handy. (however no text), but
loads everypages I tried.
Even the numerical addresses.

>Can I use PC hard discs IDE or SCSI ?

You'll need a SCSI drive and a suitable host adapter - the Link96 from Norbert W. would probably be best. See my Web site for a link to his, or watch this newsgroup - he posts from time to time.

>How to connect sound card to this computer?

Not practical, and not needed - there's a Yamaha sound chip on the motherboard, and an audio out pin on the monitor port.

>Mail me , please.

Done.

->Which hard disk i can connect to ATARI 1040 ST?
->Can I use PC hard discs IDE or SCSI ?

I don't think you can use an IDE with a ST. But if you get a Link II
adaptor, you can use just about any SCSI drives. Up to 7 at a time!

->How to connect sound card to this computer?

The ST doesn't use soundcards. You can hook up any midi device instead.
But for those "system event sounds" like on a PC, the ST uses its built-in
sound synthesizer.

Eh? What does PPP v SLIP have to do with web pages? HTTP can be carried
over either. Most ISPs use PPP these days.

: Just one word. You are truly crazy. :-)

If you think Mike's crazy, take a look at me. I have the same broken Falcon he does, and the kicker is that we both have the same problem. No video, thing refuses to boot up, that sort of thing. I'm seriously considering sending him my main board to him for testing.

One interesting thing I was doing when comparing a working Falcon to mine was that I was listening to the power supply hum. My hearing aids, since I'm deaf (a profound loss in hearing, around 90 dB), allow me to listen to the hums that the electromagnetic frequencies give out, especially near a transformer. A TV and monitor give the loudest, but *THE* loudest I've heard comes from an electrical wall panel.

Fantastic program for kids but when will it be upgraded ! It works on all
Atari's but I agree that the formats need to be improved as it's a pain
working in just one file type . I would like to see more sound effects added
also. I bought my version from TOAD computers if it's any help to you .
Hopefully Moving Pixels will see this post and make a new version.

## 5112. wtb: ATARI ST comp./hard drive

From: leslieh@valis.worldgate.com
Message-ID: <5gcg7d$3tt@scanner.worldgate.com>
Source record: 125836

Okay, skip that. I got it to connect (I neglected to add GlueSTIK (Oops! :) ). Now, I have two questions/concerns - 1) I use a 33.6 modem, and the maximum speed I can set HSModem to that will connect with the modem is 38400. This bites, as I can use the TIA setup at 115,200 or 57,600 baud. I also believe that the modem is sending stuff too fast for the computer to receive at 38,400.
2) The damn thing freezes. I can't warm boot or cold boot using keys. Any ideas as to what I can do about this?

Once I have this set up, it will be going to some 50-70 Atari users on the same ISP that I'm on, so I'm not doing this just for me (well, just a little. :) )

I believe that this is the better way to go, which is why I'm struggling with it, just in case anyone feels it necessary to point out that if SLIP's working for me, I should keep with it (I still hate the KRFree errors!)

Leslie

Hi all

I don't know if I am missing anything, but there never seems to be much discussion about Atari Computing magazine in this area!

I'm not trying to get glory for the magazine, but it would be nice to get some feedback from usenet. ATM, most of the feedback comes from NeST and Cix, with next-to-nothing from here.

I'm sure the editor and the contributors would like to hear the views/ideas/criticisms from participants in csas.

TIA

# 5120. WTB: SF 354 disk drive

Newsgroup: comp.sys.atari.st
Date: 1997-03-14 00:00:00 UTC
From: Eric Lambeth <Eric_Lambeth@baylor.edu>
Message-ID: <Eric_Lambeth-1403971853150001@hsb-dialin-11.baylor.edu>
Source record: 125843

I used to be actively involved in an atari user's group, and I still occasionally get mail from it. I recently got a letter from a fellow in Canada whose SF 354 drive went out. I figure he's probably better off to buy a new one than have it repaired, since they're so cheap.

SO... if anyone has an SF 354 drive for sale, please contact this guy:

Robert S. Hennig
307-40 Harrisford Street
Hamilton
Ontario L8K 6N1
CANADA

# 5121. Re: How to get "Nodesk" going?

Newsgroup: comp.sys.atari.st
Date: 1997-03-14 00:00:00 UTC
From: Keith Brooks <newhoriz@cadvision.com>
Message-ID: <3329E42F.D4F@cadvision.com>
Source record: 125844

Hallvard

Well... since you're not running Magic (yet) you're going to need to set NODESK.PRG up to autorun. Are you using a boot manager from which you can set it to run NODESK? Does the NODESK folder contain NODESK.PRG for that matter? You should have a NODESK.PRG, a NODESKM.PRG and a NODESKC.PRG plus the NODESK.OVL file. If you have NOSYSTEM.PRG already running from the AUTO folder, then when you get to the TOS desktop, run the CONFIG program and make sure you set the path properly for the configuration file(s). This is usually NODESK itself (I think) so once that is done, run NODESK.PRG and voila! you should have the good lookin' noDesk up and running!

Email me if you need help....

Regards
Keith

# 5123. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-03-14 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5gd6mg$qpd$1@kelly.teleport.com>
Source record: 125846
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, MonoChrome Monitors, Monitor Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

>I downloaded the latest version of Oasis, which is version 2- from the
>Oasis web page:
>
> http://www.yeadontt.demon.co.uk/
>
>Anyone have any solutions?
>

I suggest you try the version 1.35 which uses NOS instead of ICE. I have
been using it for 18 months and it really is very reliable once you have
configured the startup file required by NOS. I also tried Oasis v2.1 and
although I did get it to work, it was extremely slow and quite unreliable. I
gave up in the end and whilst I really hope the programmers get it right
they have been trying for so long I'm beginning to think they will give up.
If you try v1.35 and have a problem with NOS email me and I'll try and help.

I have on several occasion tried to access your web page but Cab always
seems to give me a 'Title Missing' error Any ideas
regards
Ted

EH>Papillon, I'd never heard of... and Phoenix?

Phoenix is a relational database, fully GEM-integrated with batches, reports and SQL query. It's quite nice but I think a really powerful language is missing (something like AdiTalk). It is surely not as powerful as Access but it does its job. A friend of mine uses it for his job as a reseller - including bills (right word?), address base, listing and quantity of all products and so on. Phoenix 5.0 supports OLGA.

Papillon is a painting programme with up to 256 colors and support for OLGA.

You also need to remember that Java and Javascript are not the same.
Java is a Sun product, and Javascript was originally developed by
Netscape.

720K disks formatted on a PC can be read by any TOS version. If you have
TOS 1.04 or newer the PC can also read floppy disks formatted on your
Atari.

>

Yes, there is all the fun of fiddling about.

But in the case of tis TOS image, to make it work I think you'd either have
to

make it relocateable (as I think Damien said) or somehow have 256K of RAM

mapped to where the TOS address is (RAM in the TOS sockets!) Then have a

startup program to load in your image to this RAM.

I've never heard of anyone trying that sort of wild idea.

(...Don't try this at home kids)

******
Other than that I have a program called EASY RIDER which can produce source

code from object files (such as your TOS.IMG). The sources it produces can
usually

be assembled on devpac, then run too!!

But you'd need a hell of a lot of memory to produce a full source listing
of a TOS.IMG!

And wether it would assemble ok a PRG is very doubtful, as the TOS is
usually hard

coded to lie at $FC0000 (or whatever) and some of the code is pretty awful,
using ref's

to these addresses etc. So all in all it still seems a lost cause to me.

Gary.

Sounds like all these theories can be linked to the PARALLEL UNIVERSE
theory.

So, in some of these universes we *will* be walking starkers down the
street...

Especially now you've made it 'real' by imagining and voicing it.

QUESTION:
In these other universes of supposed infinate possibility, are things such as
immortality and magic possible?

Is there a universe for instance, where, for some reason Albert Einstein had
some genetic (or other) 'fault' which prevented him from ageing, or dying?

If there are truly infinate possibilities, then these things and more must be
possible.

> for a VERY long time and I would risk ever.

NEW... hmmm, that's another thing isn't it?

Is anything ever new? The potential has always been there even before a
NEW thing was made or invented for it to exist.

Take TOS 1.00 again, looked at as one big number, this big number has
existed eternally, not just since TOS was compiled.

The wheel was not invented,but rather discovered...

>
> I'm begining to get the feeling that you writing the infamous "Hello

>

Why do you people always assume that someone's trying to STEAL
something?

A bit cynical and negative isn't it?

And anyhow, who'd give a damn if TOS did get stolen? It wanted
binning anyway...

Probably untrue-most of the time...
But life evolved on this planet, against the odds, then this life wrote

The works of Shakespear etc etc...

This is really a similar thing,since there are countless planets.
For some life to evolve probably depends upon the random combination
of elements being correct.

What's the difference between actaully operating fast and appearing to operate fast?!? Anyway, this was a pretty smart idea by Atari and I've seen a few modern laser printers using this technique now (I think NEC is one manufacturer using it)

>The concept is IMO excellent. Instead of using a slow interface such as

Although never having seen the guts of an Atari laser printer, it wouldn't surprise me if they did source standard parts from other companies. It's common practice, especially with products that aren't your main concern (computers, in Atari's case). HP used Canon laser engines in their printers a while back, although I don't know if this is still true.

The parts were probably more expensive if you bought them from an Atari dealer.

Hi!

I don't mean the old version. There is a new CAB optimezed version of
Texel, that together with a software called OLGA can directly
bestarted out of CAB. OLGA and the new TEXEL together are able to
create and edit complete WEB-PAGES.

You can read this in the ASH-INFO from 10th of March 97, Page two left
column nearly 8 cm from the bottom.

>Hi
>What do I need to shuffle email and news (offline) on a 1040 ST?

I use Okami, which works great. Download the Okami-archive and read the docs. It's a pain to set up, but once you've done it it works great. You can also use a uqwk on your host to make qwk-packets and read them with a qwk-reader (Kiwi is perhaps the best.) on your ST.

You can also use STiK and NEWSie, but this is IMHO not as functional. It's also hard to get STiK to work as it currently requires a SLIP-connection. It works (Sort of) on my Falcon, but it won't work on my floppy-only 1Mb 1040STF/TOS 1.4. Not a chance.

If you have such a setup, the Kiwi/UQWK-combination is the best choice. You also need a terminal-program to log on to you host and fetch/send mail/news.

>What do I need to surf the web on a 1040 ST?

A harddisk, atleast 2Mb ram, NVDI (Preferably), STiK and CAB. Or 4Mb ram, MiNTnet and CAB.

>what modems can I use/not use with the 1040 ST?

Most (If not all) modems will work fine. If you want to benefit from the higher speed of 28.8/33.6 modems you need to modify the serial-port on your ST to get speeds beyond 19200. Both commercial and freeware hardware-patches are available.

What if...
we took SNAPPERs program and it would make all possible 192 Kb big programs
just by making all the different numbers....you would be creating all possible
different 192 Kb-sized programs for all different computer systems. You are the
owner of the intellectual copyright. So if Microsoft's Windows 2000 core module
just happened to be 192 Kb (fat chance of it being so compactm, but hey), Bill
Gates would have to *buy* the copyright off you - no doubt for a lot of money.
Still, all this money wouldn't even come *close* to allowing you to buy the
storage media to store all these 192 Kb program files on...

The following ST stuff is for sale or "to clear" as they say.

No reasonable offer will be refused etc!

Please contact me by email if you are interested in any / all of the following.

Regards

Steve (stevef@dial.pipex.com)

Atari ST Hardware List

1. Atari 520STFM, 2Mb Ram, manuals, original disk and cables

2. Hard Disk, 40Mb Ladbroke Computing HD, cables and original disks

3. Modem, Amstrad SM2400, power supply, manual & cables

4. Joystick

5. 2 x Mouse, Atari original

6. Sound Sampler Cartridge, Master Sound, boxed with manual & original disk.

Atari ST Software List

- Games

1. Risk, boxed, manual & original disk

2. A320 Airbus, boxed, manuals & original disk

3. Wild Streets, boxed, manual & original disk

4. Interphase, boxed, manual & original disk

5. Thunder Blade, boxed & original disk

6. 2 x Falcon, boxed, manual & original; disk

7. Flight Simulator II, boxed, manual & original disk

- Various

8. First Word Plus, boxed, manual & original disks

9. Neodesk 3, boxed, manual & original disks

10. Multiprint, manual & original disk

11. Fleet Street Publisher, boxed, manual & original disks

12. Easy Text Plus, manual & original disks

13. GFA Basic 3.6 Interpreter & Compiler, manuals, original disks
& Advanced Programming disk & book

14. K-Spread 3, no manual, original disk only

15. Fontkit Plus, manual & original disks

Atari ST - Miscellaneous

1. 3.5" disk drive cleaning kit

2. 28 x 3.5" 720K floppy disks containing utilities, programs and PD
software

3. 37 x 3.5" 720K floppy disks suitable for re-use

This is wrong. The VM is the smallest part of Java. You also have to
write several native libraries, especially the Java AWT. The AWT covers
everything concerning graphics and an implementation of the AWT
naturally is platform dependant. Using the AWT implementation from
within Java programs is not platform dependant, of course.

Because ATM CAB uses the Stik TCP/IP layer which does not currently
support PPP, IIRC the PPP module is in beta, I'm not sure though.

> 'number'.

The differences also being that you have a set size in bytes, and you
must fill it, no matter what the data is then it will make a 'picture'
of some sort. With code as I'm sure you know, it could do absolutely
anything and be any size, and like the picture 99.99% of the time you'll
get absolute crap!

It's a bloody good question! With my ST aI'm sure all I got was the
manul, a few disks, cables and the machine. The manual contains no
licence agreement whatsoever, I don't recall anything else being int eh
package and there was deffinitely no licence with my TOS 2.06 upgrade.
Have I been sold dodgy old gear or was there never any written licence,
if no licence was written what is the de-facto law?

The thing that makes it work for you (from looking at you .sig) is that
you are a TT user, I believe that the authours have a TT & F030, it
certainly isn't too good on my plain old ST, it also makes it a lot
harder for the authours to see the problems that we have.

You'l also need something like a LINK II plugged between it and the ACSI port
on your ST. Also some Software to partition the disks.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

** Mega STE + PAK 030 @40Mhz, 68882 FPU, 4 Meg ST, 16 Meg TT RAM **
-= I can't be bothered to add a tagline to this one.

as spake by Rev.Rich@atarinet.portland.ABSOLUTELY.or.NO.SPAM.us (Rich Tietjens) :
>Tonight I'll be trying GlueSTiK (gluestik-0_02b2.zoo) [...]

GlueSTiK is actually up to 0.02b4 now. Versions before 0.02b3 won't
work with recent versions of CAB.OVL (*very* recent versions of CAB.OVL
don't work yet with any version of GlueSTiK, but I've added some bits to
0.02b4 which I hope will help me to track down the problem).

>>but CAB just crashed as soon as I tried to access a page.

>1.18 is the latest version I have been able to use. Scott has been trying to
>fix this, but no breakthrough yet.

Some progress, possibly. GlueSTiK 0.02b4 is now up, at
<URL:http://www.cs.duke.edu/~dsb/files/gluestik-0.02b4.zoo>. It
probably won't actually work any better with CAB.OVL v1.21, but it has
some extra checks which should confirm whether the problem is what I
think it is.

From: Gavin L Malpass <gavin_malpass@lineone.net>
Message-ID: <01bc317a$93ed39e0$442849c2@daniel.baker>
Source record: 125748

Hi there,

This is my first posting to this newsgroup so please don't flame me if I ask a stupid question, I have an old atari 1040 STF without a built in modulator is there any way I could build one? I live in the U.K. so it would need to work with the PAL system. If there is no way of doing this is there any way I could connect it to a PC monitor?

# 5159. Atari Falcon, Cubase Audio Studio System for sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-15 00:00:00 UTC
From: michaelk@pacifier.com
Message-ID: <5gevvh$ij5$1@news.pacifier.com>

BEST AUDIO RECORDING SYSTEM FOR THE PRICE!!
I am considering selling my master recording system. This
system has worked flawlessly for me and will handle 8 to 16 tracks of
audio. In excellent condition.

16 meg Falcon:
includes 250 meg IDE
Wizztronics DEKA interface for using external keyboard
Honeywell keyboard
All required Steinberg audio & timing fixes have been done
Beetle mouse
SCREEN BLASTER II (for higher screen resolution)
Wizztronic Cart Master LIte (allows plugging in two cartridges at once)
Intel 14400 modem
Monitor adapters for VGA and Atari Monitors

Steinberg FDI (DSP PORT Digital interface for digital recording)

SOFTWARE:
(all are original disks & include manuals)

Steinberg's":
Cubase Audio V2.06
Studio Module
Cue Trax
Style Trax
Data DAt ( for backing up files to DAT)

Zero-X (Superb sample esditing program with features similar
to Recycle)
MIdiQuest 4.0
BAnd-In-The-Box

ExtenDOS PRO 2.4a (CD-ROM driver with direct CD record to hard drive)
HD Driver 6.0 (Best Hard Disc manager for Cubase Audio)
ICD SCSI PRO Utilities 6.55 (covers things not handled by HD Driver)
XBOOT (Wonderful program launcher)
Diamond Edge II
Diamond Back III
Pagestream
Calamus
Steno
Stalker
Image copy 4.0
CD-ROMS & MORE software (Falcon games, Utilities, etc, etc)

$1100
or $1230 w/ CTX 15" SVGA Digital Monitor

Buyer pays all shipping costs

BTW: I live in Vancouver, Washington not Canada

Millenium 2.2, by Ian Bird. Doesn't work in PacifiST because of the protection
unfortunately.

>Afer, a second episode was creater but i don't remember the name.

Deuterous, which doesn't appear to work in PacifiST yet.

WMF is "Windows MetaFile," a vector format.. I don't know of any
programs on the atari that can read them. Your only way to do this
would be to possibly load it into a program in windows (word loads it)
and copy it, and paste it into a graphics program to finally be saved as
a gif..

The program that came along with the thing didn't make the actual graphics. No,
it made a disk file containing the number, the number being the amount of
different pictures that can be displayed on an Atari ST monochrome system.

From: jgvalentin@arcadis.be
Message-ID: <19970315235934168286@user99.arcadis.be>
Source record: 125756

Hello, I use SIGNUM2. Previously I had a ST, but it died a year ago and now I run it with MagicMac.

I use also the accessory for right-to-left writing as I study oriental languages such as Arabic, Hebrew and Syriac. This accessory is crucial to me. And it was not easy to find the right setup under MagicMac to get everything working correctly. It runs better with the new version, though.

Does anybody know if it would be a good idea to upgrade to a newer version of Signum?
- would I still be able to write from left to right?
- would I be able to use a color resolution instead of this boring black and white?
- what are the new features of Signum3 and 4 ?

Thanks to all for your help.

Email address : jgvalentin@arcadis.be

>Unless I have suddenly forgotten how to read, Chas, the last paragraph
>belies the first...

Ooops! It rather seems _I_ am the one who has forgotten how to read.
Thanks for pointing it out, Rich <g>.

I meant that Oasis2 works fine with _SMTP_. Having had my arm
metaphorically twisted to get on POP3, I succumbed (with a little help
from the ISP, who know nothing of Atari or Oasis, and a great deal of
sweat). The result is I can log-in and receive emails by POP3, but can't
read them from where they should be, only from the LOG file!

I'm awaiting requested instructions from the esteemed programmers: eg,
whether my parameters are set up correctly...
Here's hoping! and still _enjoying_ experimenting with Oasis2
(and STiK/CAB etc etc)!

I have the same problem.
But the PaicifST web page says there will be better mouse support in
version 0.4 (Out in two weeks) so mabie the mouse will work in DOS then.

you can use any 3 1/2" SCSI drive, provided that it does not have
parity or parity enabled - if it does have parity, have the vendor
switch it off, either through the jumpers or through software (he'll
have to hook it up to a PC for the latter route. The drive will fit
nicely, as long as it isn't too tall. As long as it's partitioned
properly, an Atari will read just about any size drive.

>After installing the drive in the case, how do I go about formatting or
>will it already be formatted?

The AHDI package includes a program called HDX, which will allow
you to format and partition the drive. It should be on the language
disk that came with your Mega STe, otherwise you can find it on an ftp
site.
>.

# 5175. NAS 97!

Newsgroup: comp.sys.atari.st
Date: 1997-03-15 00:00:00 UTC
From: bertil.jagard@straight.ct.se
Message-ID: <ftn_2.203.221$fidonet.org_2a10dc05_Bertil.Jagard@straight.ct.se>
Source record: 125765

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on
the Sunday.

The show will take place in Gothenburg, just has it has in previous
years. The exact venue has not yet been established. We're still looking
for the cheapest location. The likeliest possibility is Kortedala
gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare
programmers and a host of other interesting personalities. The usual
meeting place for all those not wanting to "hack". This is also where
the Swedish Atari Club will be found supplying information, sale of
PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area
reserved for a swap meet where you can buy, swap or sell single copies
of Atari related material and a "soldering corner" for those of you
wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for
competitions and swap demos and all kinds of code. NoCrew is the
Swedish demo group who will see to it that everybody takes part and
enjoys themselves. Those of you hungry after rewards in the form of
```

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on +46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

>general use.

Not as special-purpose as I suspect you are thinking.

Inferno is a direct descendant of Plan 9 the research operating
system which most of the original Unix designers pioneered at Bell
Labs.

These operating systems are truly extensible distributed environments
in which different components of the environment may run on many
different hosts at once. What is most intriguing to me about
inferno is that the bare bones kernel is flexible enough to support
not only multi-threaded processes, a flexible VM address space,
and through Styx, interoperability with both LAN and WAN IP networking
(with or without packet encryption).

Everything in Inferno, like in Plan 9, is implemented as a dynamic
name space, and arbitrary subtrees of this name space can refer to
processes, hardware resources, and data resources which are remotely
hosted. This environment can support the development of software
which can run native in a very small footprint, like a PDA, set
top box, or other specialized information appliance. It can also
run in a number of different virtual machines which are hosted by
other native operating systems (various Unices, NT, etc.).

I strongly recommend that you check out the pages at
http://inferno.lucent.com/inferno/index.html

I've heard some people complain about this system because its
primary language (Limbo) is not OO. That is no reason to
ignore this environment. The language is simple and elegant
and supports very flexible mechanisms for encapsulation and
module re-use which rival that of many fully OO development
environments. Also due to breadth of horizontal support from
the underying environment, it should be very easy to write
complex systems here which leverage other OS and application
services without having to re-invent the wheel - (much like
NeXT software has long enabled us to do).

Unfortunately I have still not played around with Dis yet, since
I do not have the spare hardware to load an OS which supports

Dis yet, and I keep dragging my feet on using NT.

I eagerly await a Dis implementation in the Yellow box.

Are you sure about this? I heared that the main reason that Intel
called the Pentium rather than the 586 was because tehy couldn't legally
protect numbers being used by other competitors.

No, no & No.

> I think not, but any computer file is really just a
> large number, each consecutive byte of a program
> for instance will form a big number.

It depends how you look at and interpret it, I've never seen any code that is formed entirely of numbers, you could of course look at it in binary but you could also do that with a book, you could translate it into a binary but it wouldn't remove the restrictions on it's reproduction.

> So, I can copyright big numbers but not small numbers ?
>
>
> What if I made an equation, which produced the big number
> for TOS 1.02 ?

Depends how good your equation was I suppose but in reality if you are actually using a method of encoding to encode and then decode an original TOS image then it's illegal to distribute said code. Otherwise ZIP files of pirated stuff would be legal, it is clear that they are not.

> I might even have a program, based upon this great equation
> of mine, so if I entered a 1 at the prompt, my great equation
> program would generate TOS 1.00 from it.
>
> But, if I entered a 2100 at the prompt, the (GE) prog would
> generate a copy of TOMB RAIDER for me,
> 2101 -TOMB RAIDER 2 --even before it's released, etc etc..
>
> Would this great program of mine be breaking any copyright?

They are highly complex issues BUT I woul say that if the code from the original games was used in order to write the routines to reproduce the

code then yes I would think it would break the copyright but I know you don't really care, you just want to be let off of a crime by some obscure technicallity in order to offload some guilt.

> You'd never have to buy another piece of software again...
> Also, there'd no longer be a need to write any!

If it generated NEW code then great, but that's not what you are suggesting is it and lets be honest, plugging numbers into a program like the one that you suggested via an actual algorithm that used the number and only the number to generate said code would not be possible for a VERY long time and I would risk ever.

> And, what if I wrote a great PC game, which sold really well
> then found that if I put the program file on an Atari ST, it ran
> and was TOS 1.62 ?

If you genuinely wote such code and did not look at the code for TOS then you may well get away with it although it is possibly illeagal, but again it's pretty much impossible for that to happen.

> And if I tried it on the Amiga, it ran as something hitherto not
> thought possible, e.g... A program which in itself was a sort
> of entity, with it's own consciousness ?

I'm begining to get the feeling that you writing the infamous "Hello World" program would be a challenge.

> And in so doing it might make a more sensible copyright law...

Ah of course the copyright law that protects intellectual proerty is stupid because you can't steal their work, I get you.

> And if I had 1000 monkeys with 1000 typewriters and waited
> 1000 years....

There has been recent proof that this theory is infact untrue, the proof being the Internet. Millions of people, millions of keyboards, millions of shit.

## 5186. Wordwriter converter??

Newsgroup: comp.sys.atari.st
Date: 1997-03-15 00:00:00 UTC
From: manderso@nero.uvic.ca
Message-ID: <5gcr7q$luu@uvaix3e1.comp.UVic.CA>
Source record: 125863

Does anyone know if there is a file conversion utility for Timeworks "Wordwriter" wordprocessor? I've got a bunch of documents I'd like to switch over to MS Word on a Mac, and just don't want to have to lose all the formatting as the only way to do it right now is saving as ASCII.

Any help appreciated...

Mark

I'm pretty sure Gemram can be forced to load from disk as the SHBUF
patch creates a patched version of TOS2.06 and saves it to disk so there
must be someway to load it back up, my SHBUF didn't come with
instructions however :-(

>confused by this!

I finally broke down and installed PPPkit 1.4 last night and I must report that it works VERY well - reasonably fast, stable, and (most important) I can actually connect with my ISP again. Tonight I'll be trying GlueSTiK (gluestik-0_02b2.zoo) to see if NEwsie and whatnot will work - if not, I'll have to install Oasis 1.35 again, I suppose. Anyhow, now that I see what little needs to be done to make PPPkit work, I'll be writing a simple setup program to make it simpler for people to add the specific information for their own ISPs - that way, instead of locating and manually editing 3 or 4 text files, you can just unpack PPPkit, run the installer, and then run setup in GEM to plug in the info.

I'll still probably buy Termite when it comes out, though.

# 5191. NVDI driver for Panasonic KXP1081 D.M. printer?

24 Hours Remaining before the Auction goes into the Going Once, Going Twice, SOLD.

This is your last chance to get ahold of some truly unique collectables!!!!!

---

Wild & Wacky Atari Auction (Final 24 Hours)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing your package and adding $1 for materials - Priority stuff <2 lbs will be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will be accepted. I would NOT reccomend sending cash, but some people seem to
anyway. Checks will be held for approximately 1 week to clear. MO orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 15th.
One final post will be made to newgroups. A bidder who is not on the update list may bid on a G1 item, but not a G2 item. Any raise to an item in the G1 or G2 phase will result in the item staying or returning to G1.

# 5194. For Sale: Atari Falcon 030-Email for details

Newsgroup: comp.sys.atari.st
Date: 1997-03-15 00:00:00 UTC
From: fluke@MCS.COM
Message-ID: <5gdh8g$bqe$1@Jupiter.Mcs.Net>
Source record: 125871

I have decided to sell my Atari Falcon 030 in the interest of
raising money for a new computer. The system is equipped with 4 megs of ram,
a 345 meg hd, screenblaster I, and much software. Please email for details.
I re-cased this system into a Tower case, as I wanted room for drives. I have removed the
full height 760 that I had in there, but there is still the
1x CD-ROM drive in it with a caddy. Everything works fantastic on the machine,
aside from the evil behavior of the audio in jack, which is a result of the
cruddy plugs atari put on the rear of the motherboard. Email me if you want
details. You get the computer, a TT-Keyboard, and a 3-button mouse.

Offers Starting at $650.00

# 5195. 14MB falcon upgrade and external keyboard

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: Wes Nakamura <wknaka@trinidad.stc.housing.washington.edu>

Hi all,

I'm having trouble trying to upgrade my 4MB falcon to 14MB. I have a RAMGizmo, which takes 4 30-pin SIMMs. I also have 2 sets of SIMMs: the first is a set of 4 70ns 4MB non-parity SIMMs that used to be in a TT, the other is the set of 4 1MB SIMMs that originally came in the TT. Both sets worked flawlessly in the TT. The original 4MB falcon memory board, which is what's in the falcon now, also works flawlessly.

When I use the 4MB SIMMs in the falcon, things appear to work normally, except the display has some irregularities, mostly thin multi-colored vertical lines. It seems to run all right, although I haven't left it running long enough to see if it would crash. It passes the initial memory test with no problems.

The 1MB SIMMs really screw up the display: it ends up with about 4 horizontal copies of the initial Atari bootup logo, except they're cut in half vertically. The internal IDE hdd also started to go crazy, so I turned the machine off right away.

Is the falcon more picky about memory than the TT? If the fact that the memory worked in a TT means it should work in a falcon, where can I get a replacement board that can use these SIMMs?

If the fact that the memory worked in a TT doesn't mean anything, and so either the memory or the board is at fault, where can I get a reasonably priced board that's guaranteed to work?

In short, any suggestions? Unfortunately I don't have another falcon, a different ram board, or other SIMMs to test with. Obviously I'd like to use as much as the equipment I've already got if possible.

Also, can anyone point me to the pinouts for the keyboard connector on a falcon and the corresponding pins on an external keyboard's phone jack? I have a Mega ST keyboard that I'd like to use, so I'd like to build my own connector.

Wes.

> Don't compare your lously ST browser to the power of NETSCAPE 4.0.
> FEEL THE POWER!!!!!

Feel the diskpace being sucked away! Watch in awe as your messages more
than double in size! Hear the news admins grumble as they are forced to
triple the newsservers disk capacity! Watch your subscription rates
skyrocket because *you* have to pay for it!

> Anyway I didn't ask for your opinion so please shut up.

Then why do you post in a public forum?

How about some basic stuff...

You neglected to say what model Atari you're using. Are you sure its set up
to communicate faster than 38400? A stock ST or non-Mega STe can not*
communicate faster than 19200bps. I think if you set one of these to
38400bps, you'll actually be running at sub-300bps speed...
(150bps anyone? :)

On a MegaSTe or TT you must not* use Modem1, you must use Serial1 or
somesuch... (not too familiar with anything newer than a MegaST... :P )

On a Falcon, you should be OK. You should also note that just about every
model of the ST has problems of some kind with serial ports. You should be
running HSmodem no matter what... :)

This is all basic stuff that You Should Know Already. (TM) :)
